Qatar and Germany are working on projects to develop sustainable food security, and Germany is investing in Qatar's infrastructure creation.

At a time when relations between the US and Europe are being tested, the countries are trying to maintain their economic ties, and Qatar and Germany could further ramp up their economic cooperation in the coming years.

In the run-up to the 2022 World Cup in Qatar, the two countries are looking to strengthen their economic ties, and Qatar and Germany are working on projects to develop sustainable food security.

Qatar and Germany are working on projects to develop sustainable food security, and Germany is investing in Qatar's infrastructure creation.

The Qatar-Sri Lanka free trade agreement has been signed, and the countries are looking to expand their economic cooperation in the coming years.

The Qatar-Sri Lanka free trade agreement has been signed, and the countries are looking to expand their economic cooperation in the coming years. The agreement is expected to boost trade and investment between the two countries.

Big tech is ramping up health forays

India has seen a significant increase in the use of digital health technologies, and companies like Google and Microsoft are investing heavily in the sector.

Google is investing $1 billion in a venture capital fund to invest in healthcare startups, and Microsoft is investing $5 billion in a healthcare-focused fund.

"We believe that technology can help us solve some of the biggest healthcare challenges," said Google's CEO Sundar Pichai. "We're excited to work with startups to bring these technologies to patients around the world."

Big tech will see you now: Silicon Valley ramping up health forays

Silicon Valley is ramping up its healthcare ventures to profit from a vast and fast-growing part of the economy

Bloomberg

New York, Francisco

By Jenna M Dagenhart and Ian King

The world’s next mobile network, 5G, is already wowing developers and could offer services that are 100 times faster than 4G. With its speed and data capacity, 5G will change the way we live - and the way we work. The network promises to bring faster internet connections, allowing for the development of new technologies such as autonomous vehicles and virtual reality.

How 5G will change the future of healthcare

The healthcare industry is on the cusp of a technological revolution, with 5G expected to play a key role in transforming the way healthcare is delivered. With 5G, healthcare providers will be able to connect with patients remotely, allowing for virtual consultations and remote monitoring of patients.

5G will also enable the development of new devices and technologies, such as wearables that can monitor patients’ vital signs and detect early signs of disease. This could lead to earlier diagnosis and treatment, improving patient outcomes and reducing healthcare costs.

5G will also allow for the development of new medical devices and technologies. For example, 5G-connected devices could allow doctors to monitor patients’ vital signs in real-time, even from remote locations. This could be especially useful for monitoring patients with chronic conditions, such as diabetes or heart disease.

5G will also enable the development of new medical apps and software. This could include tools for monitoring patient progress, scheduling appointments, and managing patient records. These tools could help healthcare providers to deliver more efficient and personalized care.

How 5G will change the future of transportation

The transportation industry is also poised to benefit from 5G technology. With its high-speed connections, 5G will allow for the development of new technologies such as autonomous vehicles, self-driving cars, and connected traffic systems.

5G will enable the development of new sensors and sensors that can detect obstacles and other vehicles in real-time. This could help to prevent accidents and improve road safety. 5G will also enable the development of new navigation systems, allowing drivers to get real-time information about traffic conditions and weather.

How 5G will change the future of entertainment

The entertainment industry is also set to benefit from 5G technology. With its high-speed connections, 5G will allow for the development of new technologies such as virtual reality and augmented reality.

5G will enable the development of new virtual reality devices and experiences. This could include immersive experiences such as virtual reality concerts, video games, and movies.

5G will also enable the development of new augmented reality devices and experiences. This could include smart glasses and smart watches that allow users to interact with digital content in the real world.

How 5G will change the future of manufacturing

The manufacturing industry is also poised to benefit from 5G technology. With its high-speed connections, 5G will allow for the development of new technologies such as connected factories and the Internet of Things.

5G will enable the development of new connected factories, allowing for the remote monitoring and control of machines and equipment. This could help to improve efficiency and reduce downtime.

5G will also enable the development of new connected devices and sensors, allowing for the collection of real-time data and the optimization of production processes.

How 5G will change the future of agriculture

The agriculture industry is also poised to benefit from 5G technology. With its high-speed connections, 5G will allow for the development of new technologies such as precision agriculture and smart farming.

5G will enable the development of new precision agriculture systems, allowing for the remote monitoring of crops and the optimization of irrigation and fertilization.

5G will also enable the development of new smart farming systems, allowing for the remote monitoring and control of agricultural equipment.

How 5G will change the future of healthcare

The healthcare industry is on the cusp of a technological revolution, with 5G expected to play a key role in transforming the way healthcare is delivered. With 5G, healthcare providers will be able to connect with patients remotely, allowing for virtual consultations and remote monitoring of patients.
Pakistan to give new push to slow-moving CPEC projects

Pakistan will give a new push to slow-moving projects in the China-Pakistan Economic Corridor (CPEC) during the Prime Minister Khan’s China visit. Officials said they would make it a success.

The cabinet committee instructed the Pakistan National Construction Company CPEC to expedite the implementation of ongoing projects.

The prime minister’s secretary said that the Pakistan National Construction Company CPEC (PNCC) held a meeting on Thursday.

“Cabinet officials reviewed the progress of projects and decided to expedite the work on several slow-moving projects,” the source said.

All projects included in the CPEC framework agreement have a deadline of 2025.

However, many of the projects have been delayed due to various reasons. Officials said several projects were facing funding challenges, while others had encountered technical difficulties.

Prime Minister Khan will visit Pakistan’s eastern province of Punjab to review the progress of ongoing projects.

The Pakistan government has invested $6.5 billion in the China-Pakistan Economic Corridor (CPEC), which is considered one of the flagship projects of the Belt and Road Initiative.

The project, which was launched in 2015, aims to enhance trade and investment between Pakistan and China.

Several projects have been completed, including the Gwadar port and airport, while others are still in the planning stage.

The Pakistan government has also announced plans to expand the CPEC to other countries in the region, including Myanmar and Afghanistan.

The project has faced challenges, including funding gaps and technical difficulties, but officials have expressed confidence in its success.

India moves to rein in current account deficit

India's Finance Minister Arun Jaitley at a press conference in New Delhi, Jaitley, after holding a detailed discussion with Prime Minister Narendra Modi said the government is committed to maintain its fiscal deficit target even as it monitors the impact of external factors on the Indian economy.

"One broad policy decision was to address the issue of expanding current account deficit. Measures have already been taken to cut down non-essential imports and increase exports," Jaitley said after reports of the high-level meeting.

"The meeting was attended by Reserve Bank of India (RBI) governor Urjit Patel and senior officers from the Prime Minister's Office (PMO), Ministry of Finance and Ministry of Commerce and Industry," Jaitley said. "The non-essential import items would be decided in consultation with various ministries and would be announced as and when the decisions are taken in the next few days."

Jaitley said policy decisions by the US increased the chances of dollar in the US economy compared to other economies.

"The government is monitoring the impact of the US policy decisions and the trend seen on India's fundamentals," the minister said.

"One or two factors are creating a fiscal deficit has increased. We have to face this challenge," said Jaitley.

India's current account deficit reduced to $15bn, about 1% of the country's GDP after that it was hit at an all-time high in the fiscal year 2018-19, due to the US policy.

"We have taken suggestions from both RBI governor Patel and Economic Affairs secretary Subhash Chandra Garg who had been discussing in the days to come, some issues need to be worked out," said Jaitley.

"One of these five immediate decisions to be announced will be to take steps to curtail non-essential imports and reduce the current account deficit," he said.

"We had the mandatory hedging condition for the Indian rupee now," Jaitley said. "An executive order from 2000 Indian rupee was scrapped in June 2019 against this measure. The Indian rupee has been hit against dollar in the past few months, trading near the highest level against the dollar in the past few years."

"The Indian rupee on Friday closed at 71.85, recovering from its previous close of 72.25 per greenback."

"Some clarity on the protectionist and widening of current account deficit can be expected in the days to come," said some analysts.

"The government will announce the tariffs and will be announced as and when the decisions are taken in the next few days."

"We are trying to maintain a level playing field for the Indian solar market and will announce the tariffs as and when the decisions are taken in the next few days."

"The non-essential import items would be decided in consultation with various ministries and will be announced as and when the decisions are taken in the next few days," Jaitley said.

"We are trying to control the current account deficit and will be announced as and when the decisions are taken in the next few days."
The Qatar Stock Exchange (QSE) index gained 195.12 points, or 1.99%, during the trading week, accounting for 46.3% of the total trading value during the week, the banks and financial services sector contributed 43.0 points to the index. IQCD was the biggest contributor to the index’s weekly gains, adding 47.6 points to the index. MARK was the second biggest contributor to the index's weekly gains, adding 47.6 points to the index.

**Technical Analysis of the QSE Index**

The general index closed higher by 195.12 points, or 1.99%, during the trading week and above the 10,000 major resistance level (marked the close at 10032.96 points). The next major resistance on the weekly chart is expected at the 11,000 level. In addition, the index at its 52-week-high area and managed to stay above the downtrend line which has been extending since the 2014 peak. As a result, we expected to see positive impact on the index especially in the medium term. Our weekly support remains at the 9,200 level.

**Technical Analysis of the QSE Index**

**Definitions of Key Terms used in Technical Analysis**

- **Candlestick chart**: A candlestick chart is a price chart that displays the high, low, open, and close for a given time frame. We use a one-day candlestick chart (every candlestick represents one trading day) in our analysis.
- **Doji pattern**: A Doji candlestick pattern occurs when the security's open and close are practically equal. The pattern indicates indecisiveness, and based on previous price action and future confirmation, may indicate a bullish or bearish trend.

Deutsche Bank stock-trading head says he’s playing Moneyball

Bloomberg

deutsche bank stock-trading head says he’s playing moneyball

Volkswagen AG’s stock-trading head said he’s following the playbook behind the movie starring Brad Pitt about the Oakland Athletics running an effective baseball team with a limited budget. “Moneyball” was released in 2011 as a major focus on sustainable profitability, a strategy that has been implemented by the company.

Deutsche Bank’s existing margins have been reduced over the past few years, with the company continuing to focus on improving efficiency and reducing costs. The company is aiming to increase its net profit margin in the coming years, targeting a level of around 50%.

In addition, Deutsche Bank is looking to increase its market share in key segments, such as equity derivatives and commoditities. The company is also focusing on enhancing its digital capabilities, with a goal of becoming a leader in the digital banking space.

Overall, Deutsche Bank is taking a comprehensive approach to improving its financial performance, with a focus on efficiency, cost reduction, and strategic diversification. The company remains committed to maintaining a strong capital position and maintaining a solid credit rating, which will allow it to continue to serve its clients effectively.

US asset-manager signs trade shares the market by a wide margin in 2018

Bloomberg

The US stock market was red hot in 2018. You wouldn’t know it by looking at the share of companies that manage money, but if the market is to judge, the US-China trade war could be the salve that solves the sources of growth that are plentiful, with even some signals that US tariffs could ease down almost 1.5% for 2018, compared with a gain of more than 10% for the broad S&P 500 Index. Some fund managers, including Larry Fink, BlackRock Inc’s chief executive, and Brian Breen, managing director of Fidelity Investments, note such changes in the second-quarter results, according to Goldman Sachs’s estimates.

“Then there’s an effect on shares who follow the ultimate trade manager area, including the market in the United States,” said Scott Thiele, chief strategy officer at Goldman Sachs.

The prospects for another round of US tariffs on Chinese imports, including furniture, handbags, headphones, though it did not mention the new tariff s. A strategy that appears to be working is a dividend strategy, especially from the one-class stock that would be paid to the S&P 500’s leading sectors. The final round of these products would be paid to the S&P 500.

The strategy has been one of the most important of the year, according to BlackRock’s Mike Rieder, who has made even more money than seemed possible.

Public Employees’ Retirement System of Ohio, and Pacific Investment Management Co. have bought up the bank’s debt for pennies on the dollar.

The list of targeted items in the next big round of tariffs is familiar.

But that isn’t to say that the trade is over. The run-up in stocks that began in January, along with the VIX, a measure of investors, increased even more money than seemed possible. The list of targeted items in the next big round of tariffs is familiar. The index has risen since the decline in late August, after a deep discount and wanted to see the plan. “Lehman was a bold move: buy at lower prices later than what was expected to just a few days ago,” said the concensus chief strategist.

World economy expected to grow at a healthy 3.6% in 2019: QNB

The world economy is expected to grow at a healthy 3.6% in 2019, QNB said on Saturday, as the factors that previously supported a relatively high - yet somewhat slower - world growth pace all remained in place.

After more than a decade in the doldrums, world trade volumes have rebounded strongly over the last two years, QNB said in an economic report.

The uptick in global trade was driven by the recovery of major trading economies. However, QNB noted, a number of factors remain firm and consensus forecasts indicate that the world is on course to see 2.3% growth in 2018, just 0.1% above the corresponding annual average in 2017.

The US economy is expected to grow at a robust 3.7% growth in 2018, its best performance since 2014, QNB noted, although it warned that retail sales and fixed asset investment growth may be slower in 2019 compared to 2018.

In the Euro Area and Japan had accelerated output rates above 1.8% and 1.7% from sluggish growth rates of 0.8% and 0.5% in 2017, respectively.

The US economy regained momentum to grow at a healthy 3.6% in 2019, QNB said in an economic report.

Qatar-Sri Lanka bilateral trade relations at a defining moment: Seetharaman

Qatar and Sri Lanka have witnessed a surge in diplomatic relations in the last three years, Doha Bank Chief Business Reporter Pratap John reported. The Qatar-Sri Lanka Bilateral Opportunities’ Knowledge-sharing Session held in Doha recently illustrated such increasing cultural exchange and economic relations.

During the forum, Seetharaman said Qatar and Sri Lanka have enjoyed close ties with each other, with Qatar’s Todd Mackal said that both countries share a common interest in promoting trade and investment.

"Qatar and Sri Lanka are in the throes of economic growth and development and we believe that there is a lot of potential for further collaboration in various sectors," Mackal said.

"We are committed to strengthening our bilateral relations and looking forward to further opportunities to explore new areas of cooperation."
