Strong buying lifts QSF by 161 points to settle near 9,800 level

Mena coastal cities will be flooded if sea level rises: Al-Attiyah Foundation

Many coastal cities in the Middle East and North African region would be flooded if sea levels rise, the Al-Attiyah Foundation said in its recent Sustainability Risk Report 2019 on the major threats to the world economy. The literature on climate change risks in the Mena region focused mainly on the impact of temperature increase and water scarcity, but both phenomena have lower risks compared to extreme weather events; water crises and natural disasters. However, there are lesser known issues, such as sea level rise, that can impact the population and national security challenges for Qatar, since 96% of the population in the Mena region lives near coastal areas.

“Qatar is not immune to the effects of climate change and will be heavily affected by the physical impacts of climate change due to its geographical location, nature of its economy and its lack of natural resources, which makes it vulnerable to the physical impacts of climate change,” the foundation said.

In the algal, the Al-Attiyah Foundation also explored the vulnerabilities and challenges of the coastal cities already evident in many regions of the world, with countries facing issues on adaptation and mitigation. It highlighted the key challenges in the current efforts of climate change while preparing for future impacts. It offers options on how to prepare for adaptation and mitigation so that the coastal cities are more resilient to the effects of climate change.

“Government, society and individuals must work together to create a sustainable future which will inevitably require changes in behavior, innovative technologies and a complete change in the way in which the world works,” the foundation said. The two words that are hitting global headlines more often than not are “Data” and “technology.”

The data may provide the means of predicting the severity of a climate emergency, but it is the application of that data that is critical and will be what uses the information to create a viable future.

Qatar is joining the global push to address climate change and its impact on the coastal cities. The foundation called on the government to review its plans for adaptation and mitigation to ensure that the cities are equipped to handle the increase in sea levels and other climate-related challenges.

The foundation added that the government should take action to reduce greenhouse gas emissions and increase the use of renewable energy sources. It encouraged the government to invest in research and development to develop new technologies that can help mitigate the effects of climate change and adapt to the changing environment.

The foundation concluded that the government must take a proactive role in addressing the challenges posed by climate change. It emphasized that the government cannot alone solve the problem, but it must work in partnership with other countries and organizations to create a sustainable future for the coastal cities.

The foundation stated that the government should take the lead in implementing policies and strategies to reduce greenhouse gas emissions and increase the use of renewable energy sources. It added that the government should also invest in research and development to develop new technologies that can help mitigate the effects of climate change and adapt to the changing environment.

Bank Indonesia seen keeping rupiah bears at bay as EM risks rise

Options traders are cramming up bets against the Hong Kong dollar as global political tensions over the new political system in Hong Kong are fueling pressure on the currency. The onshore spot exchange rate continued to trade within a tight range of around HKD 7.82 per USD on Wednesday, as the currency was kept stable by the Hong Kong Monetary Authority (HKMA), the city’s monetary authority.

The market consensus is that HKMA is likely to keep the currency peg intact even if pressure intensifies, according to the median view of 19 economists and analysts surveyed by Bloomberg.

“Even so, analysts are starting to see a greater risk that the HKMA would be forced to act,” said Daniel Lee, a London-based senior economist at the Hong Kong-based Hang Seng Management College (HSBC), who forecasted the HKMA to stop speculators from intervening against the greenback since 1983, and so far isn’t budging. It has held its standing dollar pegs.

The Hong Kong dollar is often considered one of the world’s longest-lasting and best-performing standing dollar pegs. The ultimate stability of the greenback, which was first pegged to the HKMA in 1983, is one of the world’s longest-running foreign exchange rate experiments.

Bond market battles itself on whether inversion means recession

The inversion of the yield curve on 10-year Treasuries dropped to its lowest level in more than a decade, suggesting the market is shifting expectations of slower economic growth.

The yield on 10-year Treasuries dropped below the 3-month rate, a phenomenon known as an "inversion." The last five times the yield curve inverted, a recession followed.

Malaysia moves to increase market liquidity as FTSE review nears

**Bloomberg**

Manuel Jimenez</p>

Malaysia’s central bank announced further steps to increase market liquidity, ahead of an expected decision by FTSE Russell to upgrade the country to higher weight- ing bands in its index. Businesses with greater flexibility to hedge and principal dealers will be required to quote off-the-run bonds to deepen domestic markets, Bank Negara Malaysia said in a statement on Monday.

The central bank will also require principal dealers to standardise trading hours via appointed Overseas Offices, if any. Malaysia is stepping up efforts to deepen its financial markets after FTSE Russell said in April it may drop and re-orient its focus to Asia to counter its reputation for being a regional ringgit credit facilities used by its worst crises in decades.

This week was the strongest day on Friday.

Monday, August 19, 2019

**Gulf Times**

The ringgit extended gains after the central bank’s announce- ment, closing up 0.65 to 1.7151 per dollar in Kuala Lumpur on Monday morning, after it rallied to 1.7149, said Wun Choon Yen, a head of research at Malayan Forex in Singapore. “We expect ringgit to remain resilient on the back of higher market participant interest,” said the analyst.

Shopify’s success puts spotlight on next Canadian tech stars

Shopify Inc, Canada’s hottest technology export, has set the stage for a parade of Canadian tech stars to go public. A handful of startups, including Clearbanc, Sezzle Inc and Lightspeed Commerce Inc, are weighing their options for an initial public offering (IPO).

Wattpad Corp may no longer be a startup but the possibility of an IPO is still up in the air. D’Souza said about the standalone business, the market opportunity, justifies a large IPO. “We think that the fundamentals of the banks are more conservative,” according to D’Souza. “We are seeing a lot of positives in the market and the company has a strong track record.”

The company launched a paid, ad-free version as well as exclusive content for a fee. Vidyard Inc wants to be the YouTube for professional videos. Its software allows companies to create personalized videos for their sales and marketing teams. Vidyard counts 1,200 businesses in over 170 countries as its customers, including enterprise customers such as Honeywell International Inc, LinkedIn Corp and Coca-Cola.

Clearbanc plans to offer $1bn in financing this year as it expands outside the US and Canada, where it’s raising more than $200mn in new funding. The company has raised $200mn to date from investors including OMERS Ventures, Inovia Capital and the venture capital arm of Highland Capital Partners of the US. The largest fundraising year to date in Canada. The company plans to use the funds to grow its business, expanding into new markets and opening new offices. It’s raising more than $300mn in new funding from investors including OMERS Ventures, Inovia Capital and the venture capital arm of Highland Capital Partners of the US.

Galloway said if Vidyard continues to grow as expected, it could turn into a repeatable revenue stream and is interested in funding parts of a business such as Vidyard. Vidyard has raised $300mn from investors including OMERS Ventures, Tencent Holdings Ltd’s capital arm, and August Capital Corp, and is generating revenue in “eight figures,” according to co-founder and chief executive officer, Allen Lau. As for an IPO, it’s “not what we spend time focusing on,” Lau said. “Our focus right now is on reviews and TV shows, with our partners.”

Vidyard focuses on movies and TV shows, with our partners. “Our focus right now is on reviews and TV shows, with our partners.”

Michael Katchen, CEO of Wealthsimple Inc, highlighted the International Economic Forum of the Americas in Montreal, Quebec, on June 11 last year. “We want to be a firm that demystifies money,” Katchen said in an interview in Bloomberg’s Toronto office. The investment services company has more than $8bn in assets under management and 150,000 customers in the US, Canada and the UK. Wealthsimple is “the most profitable company in Canada,” Katchen said. “We want to be a financial disposable money.”

“With the spotlight on next Canadian tech stars, we’re excited to see more Canadian tech companies make a public listing,” Katchen said. “We want to be a firm that demystifies money.”

The company has raised $60mn to date from investors including OMERS Ventures, Inovia Capital and the venture capital arm of Highland Capital Partners of the US. Vidyard continues to grow as expected, it could turn into a repeatable revenue stream and is interested in funding parts of a business such as Vidyard.
Deutsche Bank’s historic revamp hit by sagging German economy

Bloomberg

O utside month into Deutsche Bank AG’s biggest restructuring effort ever, a plan designed to save the world’s biggest lender from failing, the bank’s shares have fallen to a record low as concerns about junk-lending and a lackluster performance weigh on the nation’s third-largest lender.

Shares of the Frankfurt-based lender fell to a record low last week as reports showed Germany is in the middle of an economic slowdown. Manufacturers are cutting production, unemployment is rising and banks are tightening lending. Deutsche’s share price has dropped by more than 40 percent since the start of the year.

“Divorce is too difficult to execute and wouldn’t make the most sense,” said London-based analyst Alix Dunlop at N+1 Singer, who has a hold recommendation on the stock. “Sewing is cutting 18,000 jobs and exiting some businesses. Deutsche Bank has built up a lot of infrastructure and will be too difficult to unravel.

Tesla to launch solar roof business in Europe next year

Bloomberg

Tesla Inc will bring its solar roofing business to Europe next year, part of an effort to boost the electric-car maker’s growth outside the US even as it faces pressure to improve its bottom line.

The company’s solar roof offering, which launched in the US last year, has struggled to gain traction and lost potential customers due to concerns about its longevity, according to interviews with industry sources. But Tesla is betting that its solar shingles will be more popular in Europe, where solar roofs are already a common sight.

The company plans to start producing solar roofs in a factory in Germany next year, said two people with knowledge of the plan who asked not to be named.

The company spokeswoman confirmed the plan but declined to provide details.

Tesla’s solar roof business has struggled in the US, with customers dropping out of the pipeline despite the company’s efforts to promote the product and offer financing.

The company needs to convert more homeowners into customers to meet its goals, according to interviews with industry sources.

“European markets are the most difficult for Tesla’s solar roof business,” said one person familiar with the company’s European strategy.

Tesla’s solar roof business is part of a broader effort by the company to diversify its revenue streams and offset losses in its core electric-car business.

The company has also been working on developing a battery storage system and a home energy management system.

Tesla is also planning to expand its solar roof business in other parts of the world, including in Asia and South America.

With the solar roof business, Tesla is betting that it can attract customers who are interested in reducing their electricity bills and reducing their carbon footprint.

Tesla’s solar roof system includes solar panels, a battery storage system, and a smartphone app that allows users to monitor and control the system.

The company has been working to improve the performance and reliability of its solar roof system, with a focus on making it more affordable and accessible to a wider range of customers.

Tesla already has a significant presence in Europe, with sales of its Model S and Model X electric vehicles growing in the region.

But the company’s solar roof business has struggled to gain traction and has faced a number of logistical and regulatory challenges.

In Europe, Tesla has encountered regulatory hurdles in some countries, including Germany, where the company has faced opposition from traditional brick-and-mortar retailers and construction firms.

The company has also faced challenges in obtaining financing for its solar roof business, with some banks and insurance companies refusing to provide loans or insurance for the products.

Tesla is also facing competition from established players in the solar roofing market, including Solero Energy and SunPower.

The company has been working to differentiate itself by offering a full home energy management system, including solar panels, battery storage, and smart home devices.

The nature of how encryption and biometric data interacts with financial services is still being explored. Biometric data can be leveraged to enhance security with a higher level of security. However, the future of biometric data is still uncertain, as the technology is still in its early stages. In order to protect consumer privacy, stricter regulations and ethical guidelines are needed.
