Al Meera to open new branches, expand online push to ensure better reach

Al Meera Consumer Goods Company is planning to open new branches, expand its online push, and improve its product range as part of its efforts to ensure better reach and enhance customer experience.

The move is part of the company’s strategy to meet the growing demand for quality products and services in the retail sector. The new branches will be strategically located to cater to the needs of customers in various regions. The expansion of the online push will allow customers to access a wider range of products from the comfort of their homes.

Al Meera’s existing branches are well-equipped with the latest technology and offer a range of high-quality products. The new branches will be designed to provide a similar experience, with an emphasis on customer convenience and satisfaction.

Al Meera has a strong customer base in the region, and the new branches and online push are expected to further strengthen its market position. The company is committed to providing the best products and services to meet the needs of its customers.

Qatar posts jump in imports from Belgium in February: PSA

Qatar has recorded a significant increase in imports from Belgium in February, according to data released by the Qatar General Authority for Statistics (GQA).

The data shows that Qatar imported goods worth QR 250 million from Belgium in February, marking a 20% increase compared to the same month last year. The imports were mainly in the categories of machinery, transport equipment, and chemical products.

The increase in imports from Belgium is part of Qatar’s efforts to diversify its supply sources and enhance its trade relations with other countries. The country remains committed to promoting trade and investment opportunities in line with its strategic goals.

Al-Kaabi discusses energy, climate change with COP26 president

Energy Minister Mohammed bin Saleh Al-Sada discusses energy and climate change with COP26 president Alok Sharma during a meeting in the United Kingdom. The meeting focused on strengthening global cooperation in the energy sector and addressing climate change.

Qicca official underscores role of arbitration in Islamic finance

The Qicca official underscores the importance of arbitration in resolving disputes in Islamic finance. The official highlights the benefits of arbitration in maintaining fair and transparent transactions, ensuring the protection of stakeholders' rights, and promoting the growth of the Islamic finance industry.
Iraq discussing $7bn energy deal with Total, says minister

**Iraq**

Iraq is discussing a $7bn energy deal with Total that would see the French oil giant invest in two key areas in the country, the government said on Monday.

Iraq Energy Minister Thamer Ghadhban said the deal with Total was aimed at developing gas fields in the Kirkuk area and at expanding the country's power sector.

The minister said the deal would also cover the construction of a pipeline to transport gas from Kirkuk to the south of Iraq.

Karpowership’s record 5 Africa deal estimated at $15bn

**Sweden**

Karpowership AG, the world's largest vessel operator in the industry, is estimated to have bagged a $15bn deal in Africa.

The company, which entered the market in 2010, has announced that it has signed contracts with five African countries for the delivery of 5,000MW of power.

The contracts, which are scheduled for completion by 2023, are expected to provide a significant boost to the continent's energy sector.

Abu Dhabi looks to transform how the Middle East sells oil

**Bloomberg**

Abu Dhabi is looking to transform how the Middle East sells oil by focusing on the development of new models to increase flexibility and transparency.

The Emirate, which is the world's fourth-largest oil producer, is planning to introduce a new model where companies can sell oil on a spot basis, rather than committing to long-term contracts.

The move is part of a broader strategy aimed at enhancing Abu Dhabi’s competitiveness in the global oil market.

Pipeline Pressure: recent reports highlight accelerating materials costs for producers

**Bloomberg**

Pipeline providers are facing a significant increase in material costs, with some reports indicating an upward trend of 20% to 30% in the cost of materials used in the construction of new pipelines.

The rise in material costs is being driven by a combination of factors, including increased demand due to the ongoing shale revolution in the United States and weaker US dollar, which has increased the cost of importing materials.

The surge in material costs is expected to impact pipeline projects globally, with some developers looking to pass on the higher costs to customers through increased pipeline fees.

The Cost of Cargo

**Bloomberg**

The cost of transporting goods by sea has decreased significantly in recent years, with advances in technology and improvements in shipping efficiency contributing to lower costs.

The global shipping industry is expected to continue to see significant cost savings in the future, with improvements in fuel efficiency and the adoption of new technologies likely to further reduce costs.

Omar’s fiscal deficit may fall below 1%, narrow to 0.4% of GDP in 2021: EIB

By Philipp John

Qatar’s fiscal deficit is expected to fall below 1% in 2017 and narrow to 0.4% of GDP in 2021, according to the European Investment Bank (EIB), which said it had approved a $606 million ($2.3 billion) off-the-shelf credit line for the Gulf state.

The bank did not specify at what point Qatar’s fiscal deficit starts to fall, but it said that as a result of its ongoing fiscal consolidation efforts, its fiscal deficit in 2016 fell to 1.3% of GDP, from 3.3% in 2015. The EIB said it expected Qatar’s fiscal deficit to fall further to 0.9% of GDP this year and to 0.4% of GDP in 2021.

The EIB also noted that Qatar’s fiscal deficit was projected to fall to 1.1% of GDP in 2017 and to 0.6% of GDP in 2018, according to the International Monetary Fund.

The EIB said it had approved a $606 million off-the-shelf credit line for Qatar in December 2015, which was the first of its kind in the country. The credit line was approved by the EIB’s Executive Board in December last year.

The EIB said it had approved the credit line in response to Qatar’s efforts to reduce its fiscal deficit and improve its fiscal performance.

The EIB’s decision was based on a comprehensive assessment of Qatar’s fiscal situation, economic prospects and the country’s ability to repay its debt.

The EIB said it would continue to monitor Qatar’s fiscal situation and economic performance and would consider increasing its credit line if necessary.

The EIB’s credit line for Qatar is part of its broader strategy to support the development and growth of the Gulf region.

The EIB said it had approved a number of projects in the Gulf region in recent years, including in Qatar, Saudi Arabia, the United Arab Emirates and Oman.

The EIB said it was committed to supporting the development of the region and would continue to work with its partners to identify new opportunities for investment and cooperation.
US junk bond sales break 2019 record as loans surge

New York

High-yield debt sales have surged to a record $1.01 trillion in 2021, according to data compiled by Bloomberg. That is 20% higher than the previous record set in 2018. The rise in sales is being driven by a combination of factors, including a strong economy, low interest rates, and an increase in risk appetite among investors. The high-yield market has been particularly active in the last few months, with many companies issuing debt to finance acquisitions or to fund capital expenditures. The strong performance of the high-yield market is expected to continue in 2022, as companies continue to take advantage of low borrowing costs and strong demand for their debt.
WASHINGTON June 2

President Joe Biden’s Treasury Department called for a $20 trillion increase in US profits targeted at American companies that are shifting profits overseas to avoid taxes.

Making such a change is critical to reviving the US economy, Treasury Secretary Janet Yellen said in a speech at the Brookings Institution.

The Treasury Department is considering a proposal to tax overseas profits of US companies to encourage them to bring those profits back to the US.

The proposal, which is expected to be announced soon, would be part of the broader US tax reform plan that Yellen and Treasury Secretary Wally Adeyemo announced last week.

The plan would involve a global minimum tax rate of 15% on the profits of US multinational corporations.

The US government estimates that this would result in a significant increase in tax revenue for the US Treasury, potentially of the order of $200 billion annually.

The plan would also include provisions to ensure that US companies pay a fair share of taxes on their global income, including through a new minimum tax rate for multinational corporations.

The plan would also seek to eliminate tax incentives for companies to shift profits offshore, which can result in lower tax bills for US companies.

The plan would also include provisions to ensure that US companies pay a fair share of taxes on their global income, including through a new minimum tax rate for multinational corporations.

SunPower taps Amazon veteran as CEO to sell solar to the masses

New York: SunPower Corp has shunned off most of its manufacturing business, the solar company is holing in a new CEO with a background matching the new Solar Revolution.

San Jose, California-based SunPower hired Victor Parker, a veteran of PowerOne and Arco Solar, as CEO of 44 years, Parker is heading the company, according to a statement released Thursday.

The leadership change comes as various major US solar companies continue on a new business strategy after the energy sector's historic collapse with billions of dollars in losses and thousands of employees.

The company is looking to expand its sales and marketing efforts, and to focus more on domestic markets, according to the statement.

The company said it will continue its efforts to improve efficiency and reduce costs, and to further develop its product line.

The company is also looking to increase its sales in the Asian market, where it has a strong presence.

The company has announced significant cost-cutting measures, including layoffs and the closure of several facilities.

The company has a history of financial challenges, having declared bankruptcy in 2012 and emerging from Chapter 11 protection in 2013.

The company said it is continuing to work with its creditors to finalise a plan to repay the debt.

US oil firms lag far behind greener Europe rivals

Bloomberg

Europe’s largest oil and gas companies are leaving 55 clients further behind in their efforts to reduce climate change.

Total SE, BP, Enel Energy UK, S&P Global Plc and Qatar Petroleum are leading the pack, while Exxon Mobil Corp and Saudi Arabia’s Aramco lag far behind, according to a new research methodology from BloombergNEF and Bloomberg Dutch.

The new rating of 117 oil and gas companies shows that Exxon is performing more in line with renewable energy storage, electric vehicle charging points, carbon-capture technology and other decarbonization efforts, and Aramco is headed by sustainability research and development initiatives.

For example, the new European companies account for 3.9% of all renewable energy assets held by the world’s largest oil and gas producers, while it’s worth noting that this is a relatively low number compared to the high clean-energy efforts of more than 70% company is now performing in the same countries.

The study is a collaboration between BloombergNEF and Bloomberg Dutch, which is also providing several countries with the same analysis.

“Exxon’s decision to spend $2 billion on renewable energy projects in the US is a welcome step, and we look forward to seeing more of the same from the company,” said Lizzy O’Sullivan, head of clean-energy research at BloombergNEF.

“Exxon’s move is a positive step, and we look forward to seeing more of the same from the company.”

The study is a collaboration between BloombergNEF and Bloomberg Dutch, which is also providing several countries with the same analysis.

A total of 213 companies were evaluated using a methodology developed by BloombergNEF and Bloomberg Dutch.

The rating is based on the company’s carbon emissions, greenhouse gas reduction strategies, and the company’s share of clean-energy projects.

The study is a collaboration between BloombergNEF and Bloomberg Dutch, which is also providing several countries with the same analysis.

Goldman Sachs' short squeeze hits nervus as pandemic blues blur work-life line
Mannai Trading Company deploys Oracle’s Fusion Cloud at QTerminals

Mannai Trading Company (MTC), the region’s leading distributor of premium brands, has successfully deployed Oracle’s Fusion Cloud at Qterminals, a world-class terminal operating with a focus on sustainability and efficiency.

MTC, a subsidiary of Mannai Group, has been instrumental in bringing world-class solutions to Qatar, and the deployment of Oracle’s Fusion Cloud is a testament to their commitment to innovation and excellence.

Oracle’s Fusion Cloud provides a comprehensive suite of cloud services, enabling MTC to modernize its operations and enhance its customer experience.

The implementation of Oracle’s Fusion Cloud at Qterminals will enable the company to streamline its operations, improve decision-making, and enhance customer satisfaction.

Oracle’s Cloud solutions are designed to provide businesses with the agility and scalability needed to thrive in today’s fast-paced market.

The successful deployment of Oracle’s Fusion Cloud at Qterminals is a significant milestone for MTC and a testament to the company’s commitment to excellence.

Google’s ex-policy lead founds tech-friendly progressive group

Stemming from his experience at Google, where he led the company’s policy efforts, the new venture aims to drive innovation and progress in the tech industry.

His expertise in policy-making and his passion for technology will undoubtedly contribute to the development of new solutions and advancements in the sector.

The group’s mission is to create a more inclusive and equitable tech environment, where diversity and inclusivity are valued and promoted.

The group’s initiatives will focus on driving meaningful policy changes, fostering innovation, and ensuring that technology is used to benefit society.

The group’s efforts will be directed towards a variety of areas, including accessibility, privacy, and sustainability, as well as promoting gender equality and diversity in the tech industry.

The group’s work will be guided by a strong commitment to principles of transparency, accountability, and inclusivity.

The group’s leadership and expertise will be instrumental in shaping the future of the tech industry, ensuring that it remains a force for good and continues to drive positive change in society.

ECB’s Lane says euro-area recovery heavily reliant on fiscal aid

ECB’s Lane said that the euro-area recovery is heavily reliant on fiscal aid, as the region faces continued uncertainty and challenges.

The euro-area economy, which has been hit by the pandemic, is still recovering and remains vulnerable to external shocks.

The ECB, along with other major central banks, has been providing emergency funding to support the economy and prevent a deeper recession.

The region’s fiscal policy makers have been stepping up their efforts to provide support, with various countries implementing stimulus packages and monetary easing measures.

The euro-area recovery is dependent on a combination of factors, including fiscal policy, monetary policy, and external conditions.

The ECB’s Lane emphasized the importance of maintaining a supportive fiscal stance to support economic recovery and help the region weather the ongoing uncertainty.
