Dukhan Bank offers ‘Apple Pay’ to its customers

Dukhan Bank is now offering its customers Apple Pay, a mobile payment and digital wallet service developed by Apple. Apple Pay makes payments simple, secure, and private, ensuring that customers enjoy a hassle-free experience. Apple Pay supports contactless and NFC (Near Field Communication) technology, allowing quick and easy transactions. DukhanBank customers can simply tap their Apple devices on any NFC-enabled payment terminal to make a secure and convenient payment. Every Apple Pay transaction is protected by Apple’s security technologies, ensuring that customer transactions are secure.

Customers simply hold their iPhone or Apple Watch near the payment terminal to initiate the payment process. The Apple Pay feature is available for iPhone models with iOS 11 or later, and Apple Watch users with watchOS 5 or later. The service is supported on the Dukhan Bank mobile app as well as on Near Field Communication-enabled devices.

Customers can use their Apple iPhone, iPhone, and Apple Watch to make contactless payments. The Apple Pay feature allows customers to add their Dukhan Bank credit cards, debit cards, and Apple Pay to the wallet on their Apple device, ensuring convenience and accessibility. The iPhone’s Touch ID or the Apple Watch’s Apple Pay feature can be used to authenticate payments.

The service is available within the Gulf countries, including the UAE, Qatar, Saudi Arabia, and Bahrain. The Dukhan Bank’s Mobile App users can also access the Apple Pay feature by logging in to their account and enabling the Apple Pay service.

For more information on Dukhan Bank’s mobile services, visit their official website: www.dukhanbank.com.qa or contact customer service on 800-5555.

Qatar’s Islamic Banking assets total $121.7bn in 2020: Alpian Capital

By Pratin John

Qatar’s Islamic banking assets stood at $121.7bn as of 2020, according to a recent report by Alpian Capital. The report, titled “Islamic Banking in Qatar: Market Analysis and Key Trends,” provides a comprehensive overview of the Islamic banking sector in Qatar. The report highlights the significant growth in Islamic banking assets in Qatar, attributed to the growing demand for Sharia-compliant financial products.

The report identifies several factors that contribute to the growth in Islamic banking assets in Qatar. These include the increasing awareness of the benefits of Sharia-compliant products, the government’s support for the development of the Islamic banking sector, and the rising demand for alternative investment avenues.

The report also discusses the key players in the Qatar Islamic banking market, including Dukhan Bank and Qatar National Bank. The report highlights the strategies employed by these banks to expand their Islamic banking services and attract more customers.

The report concludes with a forecast that the Qatar Islamic banking sector is likely to continue growing in the coming years, driven by the increasing demand for Sharia-compliant financial products and the government’s support for the development of the Islamic banking sector in Qatar.

UDC and its subsidiaries increase capital share in Qatar Cool

United Development Company (UDC) and its subsidiaries have increased their share in Qatar Cool, a leading producer of ice cream in Qatar. The increase in share is a strategic move to strengthen the company’s position in the market and increase its market share. The move is expected to benefit the company in the long run.

The increase in share is a testament to the strong financial position and financial performance of UDC and its subsidiaries. The company has a strong track record of delivering consistent and high-quality products to its customers. The increase in share is expected to further strengthen the company’s position in the market and increase its market share.

The move is expected to benefit the company in the long run, as it is expected to increase the company’s revenues and profits. The company is also expected to benefit from the increased market share, as it is expected to increase its sales and improve its customer base.

The increase in share is a strategic move to strengthen the company’s position in the market and increase its market share. The move is expected to benefit the company in the long run, as it is expected to increase the company’s revenues and profits. Oil, derivatives and gas may see demand for decades to come!

By Richard Feemster

Focal

For US President Donald Trump, China has become an important and global rival particularly on climate change issues, which may strengthen US relations with European and Japanese partners.

Historically, in many areas, one or another oil price shock has come into conflict with the main发动机olated fossil fuels which include derivatives and gas to align national security and foreign policy with environmental goals.

Climate change is a priority for US foreign policy, and we are determined to work together with the international community to address climate change.

In recent years, the United States and China have agreed to work together on climate change issues. These agreements are important steps in addressing this global challenge.

China has made significant progress in reducing its greenhouse gas emissions. The country has set ambitious targets for reducing carbon emissions by 2030, and is working to phase out coal and increase the use of renewable energy sources.

The US is also committed to reducing its greenhouse gas emissions and has set a target of achieving carbon neutrality by 2050. The Biden administration has reversed many of the climate change policies initiated by the previous administration, and has announced plans to increase renewable energy and protect the environment.

China and the US share a common interest in ensuring stable and predictable energy supplies, which are essential for economic development and security.

The two countries have a long history of cooperation on energy issues, including the promotion of clean energy technologies, and the development of new energy sources.

Current demand for oil and gas is expected to remain high in the near term, driven by growing demand from emerging economies such as China and India, as well as the need for energy security.

However, the long-term outlook for demand remains uncertain, with a range of factors such as economic growth, energy efficiency, and policies on renewable energy sources that will affect future consumption.

In the short term, the US and China will continue to work together to meet their climate change goals and ensure stable energy supplies.

In the longer term, the two countries will need to find a balance between economic growth and environmental protection, and will need to work together to address global challenges such as climate change and energy security.
