Asia markets hit as Delta, Fed and China jolt recovery rally

E dge markets fell in Asia and Europe yesterday, with most major equity indices taking losses as China’s Delta variant fuelled a rise in COVID-19 cases, while US Federal Reserve Chair Jerome Powell’s comments about tapering drove down US Treasury yields, thereby extending maturities and pushing down US long-term interest rates. The China headline that has raised a red flag for investors is the rise in COVID-19 cases, with the country recording the highest number of cases in months. The rise in cases has raised concerns about the impact of the Delta variant on the global economy. Meanwhile, the US Federal Reserve has indicated that it may begin tapering its bond-buying program soon, which has led to a rise in US Treasury yields. The rise in yields has negatively impacted equity markets, particularly in Asia, where investors are concerned about the impact of higher interest rates on economic growth. The rise in COVID-19 cases in China has also raised concerns about the country’s ability to sustain economic growth. The rise in cases has led to a rise in anxiety among investors, who are concerned about the impact of the Delta variant on the global economy. The rise in yields has led to a rise in anxiety among investors, who are concerned about the impact of higher interest rates on economic growth. The rise in yields has led to a rise in anxiety among investors, who are concerned about the impact of higher interest rates on economic growth.

EM equities suffer worst week in 6 months on growth worries

B raking news of faster-than-expected CPI inflation in China caused equities to fall globally, with oil prices rising sharply. The rise in oil prices has led to a rise in anxiety among investors, who are concerned about the impact of higher energy prices on economic growth. China firms shy away from ESG loans holding them to account

B loomberg

N ot all financial institutions in China are willing to embrace Environmental, Social and Governance (ESG) lending, with many seeing the risks outweighing the benefits. The Chinese government has been pushing for ESG lending, particularly in the renewable energy sector, but some banks and financial institutions are hesitant. Evergrande vows to fix debt after rare China rebuke

Binance tightens checks on customers

**EVERGREEN**

China Evergrande Group pledged to swiftly strengthen its public relations and to reassure the market, in a rare rebuke after it failed to make a $600 million interest payment on a dollar-denominated bond.

The company said it will beef up its risk management and to build up its liquidity to ensure its financial stability. The Evergrande group had been struggling to meet its financial obligations, with some of its key lenders and investors expressing concern over its ability to pay back its debt.

The announcement came as the company’s stock tanks in Hong Kong, where it had dropped by more than 15%.

Evergrande, which is one of the largest developers in China, has been facing liquidity issues due to its high debt levels and falling property sales.

The company said it has taken steps to strengthen its liquidity management and to ensure its financial stability. It also said it has been in talks with its creditors to restructure its debt.

The company’s chairman, Hui Ka Yan, said: “We are confident in our ability to address the challenges we face and to continue to deliver value to our stakeholders.”

**Binance**

Binance, the world’s largest cryptocurrency exchange, has tightened its checks on customers to prevent illegal activities.

The exchange, which has been facing regulatory scrutiny in various countries, said it will now require customers to verify their identities before trading.

The move comes after a recent flurry of regulatory actions targeting cryptocurrency exchanges, with some countries cracking down on illegal activities such as money laundering and terrorist financing.

Binance said it was implementing the new measures to comply with international standards and to prevent illegal activities.

The exchange also said it was working with regulatory authorities around the world to ensure compliance.

Binance’s CEO, Changpeng Zhao, said: “We are committed to complying with all relevant regulations and to protecting our users.”

Post-pandemic recovery of LNG market: What’s next?

By Bullis Foundation

The global economy is cautiously waddling away from the shadow of the double-dip

starting and ending the COVID-19 pandemic. The gas sector is following a trend of

bouncing back, but it faces multiple challenges.

**Fossil fuels** remain a major source of energy for global consumption, but the transition towards a low-carbon future is increasingly

important. As the world moves towards a net-zero emissions goal, the role of cleaner

fuels like natural gas becomes more prominent.

**Natural gas price fundamentals**

In recent months, natural gas prices have shown a significant rebound, particularly in

the US and Europe. This rebound can be attributed to several factors:

- **Winter season**:

  - Cold weather conditions in key gas consuming regions have increased demand for gas for heating.
  - Lower natural gas inventories in storage facilities have contributed to higher prices.

- **Supply disruptions**:

  - Outages at key LNG terminals, such as those in North Africa, have reduced supply.

- **Increased industrial activity**:

  - The reopening of economic activities following the easing of lockdowns has increased industrial gas consumption.

Despite these factors, the natural gas market remains volatile, with prices subject to

fluctuations driven by weather conditions, supply disruptions, and economic activity.

**Fortress mulls options after Morrisons agrees rival CD&R takeover offer**

By实务

Fortress Investment Group, the US private equity giant, has been in talks with key players in the retail sector for months, including Morrisons, Sainsbury’s, and Asda, to explore options for CD&R’s rival offer for Morrisons.

Fortress has reportedly been in talks with Morrisons and Sainsbury’s to explore options for CD&R’s rival offer for Morrisons.

By实务

Nvidia’s $40bn deal for ARM faces a major hurdle as the US National Security

and Defence Committee (NSC) has blocked the acquisition.

**Dollar touches new high as investors head for safety**

By实务

The US dollar reached a 30-year high against a basket of major currencies on Monday,

reflecting investor sentiment that economic recovery in the US is well underway.

**The safe haven US dollar touched a 30-year high, topping off a strong week before

a disappointing jobs report in the US, which raised doubts about the economy’s

recovery.**

---

**Business**

The transformation of the LNG sector has been accelerated by advances in marine transport, pipeline infrastructure, and liquefaction technologies. These developments have contributed to reducing the cost of transport and enabling new markets to emerge.
