Compulsory health cover to boost takaful prospects in Qatar, other GCC countries: Moody’s

By Fatima Alnowais

Compulsory medical insurance in Qatar, along with other GCC countries, is expected to boost takaful growth as the region’s medical infrastructure improves, according to Moody’s. The report notes that “the usage of medical insurance in Qatar, as in other GCC countries, is expected to expand as a result of improving medical infrastructure.”

Moody’s observations are based on a report titled “The Future of Customary Law-Based Insurance: Takaful in GCC Countries.” The report highlights the potential for takaful in the region, noting that “the introduction of compulsory medical insurance is likely to boost takaful growth in the short term, as individuals seek to protect their health.”

Moody’s also predicts that “the growth in takaful will be driven by the increasing awareness of the benefits of takaful among the population.” The report further suggests that “takaful will continue to grow as the region’s medical infrastructure improves.”

Moody’s report also highlights the potential for takaful in other GCC countries, including Saudi Arabia, Bahrain, and the United Arab Emirates. The report notes that “the growth in takaful is expected to be driven by the increasing awareness of the benefits of takaful among the population.”

Moody’s report concludes that “takaful has the potential to become a significant component of the region’s insurance market.”

Dukhan Bank named ‘Best Islamic Digital Bank 2021’ and Most Innovative Digital Bank 2021 in Qatar by Global Finance

Dukhan Bank has received two awards from Global Finance, the leading provider of financial news and analysis, for its innovative digital banking solutions. The bank was named ‘Best Islamic Digital Bank 2021’ and ‘Most Innovative Digital Bank 2021’ in Qatar. The awards were presented at the Global Finance Awards Ceremony held in London earlier this month.

The ‘Best Islamic Digital Bank 2021’ award recognizes Dukhan Bank’s efforts in providing innovative and user-friendly digital banking solutions that cater to the needs of the Islamic banking sector. The bank’s digital banking platform, Dukhan Digital, has been designed to provide a seamless and intuitive banking experience to its customers.

The ‘Most Innovative Digital Bank 2021’ award recognizes Dukhan Bank’s efforts in implementing innovative and cutting-edge technologies to enhance the digital banking experience. The bank’s digital banking platform, Dukhan Digital, has been designed to provide a seamless and intuitive banking experience to its customers.

Dukhan Bank’s Chief Executive Officer, Mr. Ali Al-Abdulla, said: “We are thrilled to receive these two prestigious awards from Global Finance. This recognition is a testament to our commitment to providing innovative and user-friendly digital banking solutions that cater to the needs of our customers.”

Dukhan Bank has been at the forefront of digital banking in Qatar, with a strong focus on providing innovative and user-friendly digital banking solutions. The bank’s digital banking platform, Dukhan Digital, has been designed to provide a seamless and intuitive banking experience to its customers.

Qatar Travel Mart 2021

Qatar Travel Mart (QTM 2021) will be held from November 1-3 at the Doha Exhibition and Convention Centre (DECC). The event will provide a business platform for travel and tourism businesses to connect with potential customers, suppliers, and partners from around the world. The event will feature over 300 exhibitors from more than 20 countries, including key markets such as the United States, Europe, the Middle East, and Asia. The event will also include a business-to-business matchmaking programme, as well as a series of workshops and seminars on the latest trends and developments in the travel and tourism industry.

Over 75 prominent firms confirm participation at Qatar Travel Mart 2021

Huahong posts $15.9bn loss as leverage hits 3,333 times

BUSINESS

Huahong

C HINA’s Huahong Uni-Chip posts a record loss of $15.9 billion in 2022 with its debt-to-equity ratio of 3,333 times, after the firm issued an $8 billion special dividend in 2009, followed by a special dividend of $6 billion in 2010.

The company had a net loss of $15.9 billion in 2022, with its total assets of $6.63 billion, based on its annual report published on the Shanghai Stock Exchange website. The net debt is $2.77 billion, with a debt-to-equity ratio of 3,333 times, compared to 1,270.7 times in 2021.

The company’s leverage ratio increased from 1,270.7 times in 2021 to 3,333 times in 2022, indicating a significant increase in financial risk.

Huahong started operations in 2009 and has been expanding aggressively ever since, going public in 2010 with an initial offering of $2.5 billion. The company has since pursued a strategy of rapid expansion, but its debt levels have continued to rise.

The company’s largest single customer is Huawei, which accounts for over 15% of its revenue. Huawei is facing its own financial challenges due to U.S. sanctions, which have severely impacted its ability to access equipment and components.

The company’s CEO, Liu Tong, said in the annual report that the company’s business is facing significant challenges due to the global economic downturn and the impact of trade sanctions. He added that the company will focus on improving its financial health and expanding its customer base.

Huahong’s loss comes as the semiconductor industry as a whole faces a downturn. Many companies have been cutting back on capital expenditures and delaying new projects due to weak demand and falling prices.

Huahong is not alone in its financial difficulties. Other major semiconductor companies, including TSMC and Intel, have also reported losses in recent years.

Despite the challenges, the company remains optimistic about its future. Liu Tong said that the company will continue to invest in R&D and develop new technologies to stay competitive in the industry.

The company’s shares have been trading at around $1.5 each, down from a high of over $5 in 2010.

GoAir gets initial share sale nod from India’s market regulator

GoAir

GoAir has received the nod from India’s market regulator to raise funds through the issue of 60.43 million shares at a price of Rs 850 per share.

The airline will use the proceeds to support its operations and growth, including the purchase of new aircraft, the modernization of its fleet, and the expansion of its network.

GoAir is the third-largest airline in India, with a fleet of 49 aircraft and 35 domestic and international destinations.

The company’s CEO, AshishLOOD, said in a statement that the share sale will provide the company with the necessary capital to support its growth plans.

The company’s share price has been trading at around Rs 550 each, down from a high of over Rs 1,200 in 2015.

The company has been facing challenges due to high fuel costs and competition from other airlines.

The company’s IPO was oversubscribed by 3.8 times and the issue closed on July 3, 2019.

Ch Obama to clamp down on tech firms’ overseas IPOs

Ch Obama

O bama is to clamp down on tech firms’ overseas IPOs, in a move to shore up the stability of Wall Street and ensure that the country remains a global financial hub.

The new rules, which will come into effect next year, will require all tech companies with a market capitalization of $1 billion or more to list their shares on the U.S. stock exchange.

The move follows a series of high-profile overseas IPOs by technology firms, which have raised concerns about the stability of Wall Street and the impact on the U.S. economy.

The new rules are expected to bring back the tech firms, which have been listed on overseas exchanges, to the U.S. stock market.

The move is part of the administration’s broader efforts to strengthen Wall Street and the U.S. economy.

The administration has also announced plans to raise capital gains tax rates and introduce tougher regulations for Wall Street firms.

The new rules are expected to increase costs for the tech firms, but are seen as a necessary step to bring back the tech firms to the U.S. stock market.

China's new data leaves firms with more questions than answers

China is weighing new regulatory policies for its giant tech companies, catching them off-guard and raising concerns among industry watchers.

The pressure on Chinese tech firms has come amid a broader regulatory crackdown on the sector, which has seen authorities also move to curb the rapid growth of some of the country's largest companies.

The move comes as Beijing continues to step up efforts to rein in the tech industry, which has been criticized for its lack of regulation and for potentially posing a threat to national security.

China's data showed that second-quarter GDP growth was weaker than expected, adding to concerns about the economy's sustainability.

The data, which was released on Thursday, showed that GDP growth slowed to 7.9% year-on-year in the June quarter, missing expectations of 8.0%.

This has raised concerns about the country's ability to meet its growth targets for the year, which were set at 6.5% by the government.

China's tech stocks' brief respite is showing signs of fatigue

China stocks were oscillator in Monday's trading, with gains seen in the blue chip indices and losses in the small and mid-cap segments.

The benchmark Shanghai Composite Index rose 0.2% to 3,358.90, while the Shenzhen Component Index gained 0.2% to 10,912.21.

Overlooked IPO markets are booming as China deals slow

Overlooked IPO markets are booming as China deals slow

The number of IPO deals in China's smaller markets has surged in recent months as the country's main equity markets have seen a slowdown.

The country's main equity markets have been overshadowed by the vast number of IPOs in the country's smaller markets.

In the first half of this year, China's smaller markets have accounted for more than 60% of the country's IPO deals, compared to just 10% in the same period last year.

Qatar’s general PPI increases 6.6% month-on-month in July: PSA

Monthly Producer Prices (PPI) in Qatar, its industrial output indicator, rose by 6.6% month-on-month and 15.2% year-on-year in July, according to the data released by the General Authority for Statistics and Quality (PSA).

For the first time since mid-2020, the producer index soared in July as compared to June with a reading of 104.8 (2012 = 100), compared to 102.0 in June, leading to an annual increase of 15.2%.

The rise in the PPI in July was driven by the increase in the index of materials, semi-finished goods, and finished goods.

Evaluating the figures, PSA noted that this significant increase in July is mainly attributed to the rise in the prices of fuel, chemicals, and metals, which contributed to the overall increase in the index.

The PPI index is a key indicator for inflationary pressures as it reflects raw materials' costs. The hike in the PPI reflects upward pressures on consumer prices, which could be reflected in higher inflation rates in the coming months.

Inflationary pressures are already evident in the consumer price index, which increased by 1.5% year-on-year in July, the highest level in five years.

The rise in the PPI could also indicate that producers are passing on higher costs to consumers, which could further squeeze the purchasing power of households and reduce consumer spending.

The increase in the PPI is also likely to put upward pressure on wages, as businesses may need to raise salaries to retain or attract workers.

On the other hand, the rise in the PPI could be a positive sign for exporters, as it could make their products more expensive but also more attractive to buyers looking for higher-value products.

Overall, the increase in the PPI is a双刃剑: it could lead to higher inflation and reduced purchasing power but also could provide a boost to export-oriented industries.

On a monthly basis, the PPI for raw materials jumped 11.5%, materials and products rose by 7.4%, and semi-finished goods increased by 6.6%.

The increase was broad-based across various sectors, with notable gains in the chemical industry, metals, and fuel.

Despite the rise in the PPI, Qatar remains a net oil exporter and the hike in prices is unlikely to significantly impact the country’s overall economic performance.

The hike in the PPI is a reminder that Qatar, like other Middle Eastern countries, is exposed to fluctuations in the global commodity market and could face challenges in managing inflationary pressures.

Overall, the rise in the PPI underscores the need for policymakers to closely monitor inflationary pressures and implement measures to maintain price stability and support the country’s economic growth.

ICAI Doha & Kuwait chapters hold leadership council

The ICAI Doha & Kuwait chapters held their annual leadership councils in recent weeks.

The ICAI chapters in Doha and Kuwait are part of a network of professional accounting bodies that promote ethical standards, education, and networking opportunities for accountants.

The leadership councils provide a platform for members to discuss issues, share ideas, and collaborate on initiatives that can enhance the professional reputation of the institute.

The leadership councils are crucial in setting the direction of the chapters, ensuring that they meet the needs of their members.

At the council in Doha, the president-elect was announced, and the council discussed strategies for expanding membership and enhancing services.

The council in Kuwait reviewed the impact of the recent regulatory changes on the profession and discussed plans for future events and workshops.

The leadership councils are vital in ensuring that the ICAI chapters in Qatar remain relevant and responsive to the needs of their members.

New ECB strategy could reduce need for bond-buying, low rates

The European Central Bank (ECB) has embarked on a new strategy to reduce its dependence on bond-buying to stimulate the economy.

The new strategy is part of the ECB’s efforts to diversify its policy tools and reduce its reliance on traditional monetary policy measures.

The ECB has been buying government bonds in large quantities to keep interest rates low and stimulate economic activity.

However, the ECB has faced criticism for its bond-buying programs, with some arguing that they have contributed to financial vulnerabilities and reduced the effectiveness of monetary policy.

The new strategy, codenamed “Next Normality,” aims to shift the ECB’s policy approach to a more diversified mix of tools, including forward guidance and structural reforms.

The Governing Council’s decision is seen as a step toward phasing out bond-buying, which has been a key component of the ECB’s policy response to the pandemic.

The new strategy is expected to result in lower bond yields, which could reduce the ECB’s need to buy bonds and allow it to shift its focus to other policy instruments.

The ECB’s decision is seen as a significant step towards reducing its reliance on bond-buying and diversifying its policy toolkit.

The new strategy is expected to reduce the ECB’s need to buy bonds and allow it to focus on other policy instruments, such as forward guidance and structural reforms.

However, the ECB’s ability to reduce its dependence on bond-buying will depend on the effectiveness of its new strategy and the response of markets.

Some economists argue that the ECB’s new strategy may not be sufficient to reduce its reliance on bond-buying, and that the bank may need to continue to buy bonds in large quantities to keep interest rates low.

Overall, the ECB’s new strategy is seen as a step towards reducing its dependence on bond-buying and diversifying its policy toolkit, but the effectiveness of the strategy remains to be seen.

Options turn upheavals into a mid-month sure thing for S&P 500

What can you say about a stock market crash that never occurred? Or a recession that never happened? Or a pandemic that never emerged?

The truth is, these events are all hypothetical scenarios that we can only imagine. But what if we could turn these hypothetical scenarios into real-world events? What if we could take these events and turn them into actual market movements?

With the help of advanced software systems and algorithms, these scenarios are not just hypothetical anymore. They can be simulated and analyzed to predict how they would affect the market.

The software systems can simulate the impact of different economic shocks, such as a recession or a pandemic, and how the market would react to them.

This way, investors can prepare for the worst and make informed decisions. What was once just a hypothetical scenario can now be turned into a real-world event.
