Korean PM visits National Museum

Prime Minister Lee Nak-yon and his accompanying delegation visited the National Museum of Qatar yesterday. The cabinet was given guided examinations of the museum’s treasures. The museum’s official statements, the archaeological sites and monuments, the life of the people of Qatar on land and coast, and the digital exhibition. He was also treated to the most important pieces and collections related to Qatar’s history, such as artefacts from the discovery of a single, the Life of the people of Qatar on land and coast, and the digital exhibition. At the end of the tour, he requested that the minister be allowed to sign the Golden Register of the National Museum of Qatar.

**OBRI collaborates with University of Warwick researchers**

OBRI has collaborated with researchers from the University of Warwick to better understand the impact of normal and high glucose concentrations on human endothelial cells, which form the lining of our blood vessels. The researchers examined the impact of normal and high glucose concentrations on human endothelial cells, which form the lining of our blood vessels.

The research was conducted by Dr. Rabbani and his team, who are investigating the mechanisms that link glucose concentrations to the formation of blood clots and inflammation. They showed that high glucose concentrations can lead to the formation of blood clots and inflammation, and that this process is more pronounced in diabetic patients. They also showed that high glucose concentrations can lead to the formation of blood clots and inflammation, and that this process is more pronounced in diabetic patients.

The research was supported by the Qatar National Research Fund, and was published in the *Diabetes Research and Clinical Practice* journal. The findings have important implications for the prevention and treatment of diabetes, as well as for the development of new therapies to combat the disease.

**Korean PM visits National Museum of Qatar**

The South Korean Prime Minister Lee Nak-yeon and his accompanying delegation were recently briefed on the collections at the National Museum of Qatar. The museum provided a step-by-step guide to the visitors, offering a number of key insights into the significance of the collections.

The museum’s executive director, Dr. Rabbani, emphasized the importance of understanding cultural and historical contexts in order to appreciate the significance of the collections. He also highlighted the museum’s role in fostering dialogue and understanding between cultures.

The museum’s sustainable development strategy is focused on the enhancement of green fodder production and the support of local farmers. In poultry production, too, significant support has been provided to local producers through a number of programmes, such as the MME’s initiative to buy sheep from local farmers.

**Oman Medical Corporation (OMC)**

The Oman Medical Corporation (OMC) is a leading healthcare provider in the Sultanate of Oman. It is committed to providing high-quality healthcare services to the residents of Oman, encompassing a wide range of specialties, including primary care, specialty care, and emergency services.

**Qatar solar strategy**

Qatar has made great strides in food security, with the country’s ability to produce its own food increasing significantly in recent years. This has been achieved through a number of initiatives, including the expansion of fish farming projects and the support of local producers. In poultry production, too, significant support has been provided to local producers through a number of programmes, such as the MME’s initiative to buy sheep from local farmers.
Qatar Charity (QC) recently launched a community centre in Kogali, Turkey, to alleviate the suffering of Syrian refugees and Turkish citizens at an estimated cost of $750,000.

The centre is one of the results of the QUEST initiative with support from Qatar Charity and Turkish Red Crescent. Al-Mogaiseeb thanked Qatari donors and QC officials at the opening of the community centre in Kogali.

"We are always making efforts to provide better services for the benefit of Syrian refugees and others who have suff ered the outcome of war in their countries," he said. "Our aim is to treat patients and help them regain their normal lives." He added that the centre provides "great services for the benefit of Syrian refugees, including child care services, psychological support and education services, as well as economic empower- ment and employment opportunities." He also pointed to the special relations between Qatar Charity and the Turkish Red Crescent through the implementation of many projects inside Turkey and on both sides of the Turkish-Syrian border.

The centre was opened in the presence of families and children, who have suff ered from war in their countries.

Bayram Salawi, director of the centre, said: "I was injured and had my leg amputated, and I was treated in that besieged area, which lacked specialist institutions and facilities. Then, I was relocated to Turkey, where I found that the costs of surgery are too expensive. In addition, there was a long waiting period before I was able to have my leg amputated. I immediately requested our centre to help me, and they were able to treat me as soon as possible."

"As physicians and specialists, we know the knowledge and experiences we have to help those poor people. We are usually members of several organizations and we are working together to provide the best medical care to those who are suffering and desperate for medical interven- tion, but they cannot afford the costs due to their financial condition."

"We are putting all our efforts to provide the best services for those who are suffering and help them achieve their goals in the future in order to become active members of their community," he added.

"This is not something unusual for the government and people of Qatar, who are known for their humanity and sense of humanity," he noted. "Ammar al-Bashtani, father of a child, was injured in eastern Ghouta due to bombing, and his leg had to be treated in that besieged area, which lacked specialist institutions and facilities. Then, I was relocated to Turkey, where I found that the costs of surgery are too expensive. In addition, there was a long waiting period before I was able to have my leg amputated. I immediately requested our centre to help me, and they were able to treat me as soon as possible."

"As physicians and specialists, we know the knowledge and experiences we have to help those poor people. Al Thumama Stadium is looking great!

The Supreme Committee for Delivery & Legacy (SC) has tweeted some images of the under-construction Al Thumama Stadium in Doha. “Al Thumama Stadium is looking great! Bleacher installation is nearing completion and installation of the columns that will support the facade is underway. After the successful completion of the roof big lift, installation of the roof structural steel has also begun.” the SC said.

Humid conditions likely to continue today

Humid conditions are again expected in some places by tonight, the Qatar Met department has said in its forecast for today. Parts of the country experienced moderately high humidity yesterday morning and the trend seems set to continue today. The detailed forecast for today and tomorrow was not outlined but during the daytime and night dust is expected to rise in some places at times. Some clouds are also likely. Offshore, misty conditions are expected at times along with some clouds. The maximum temperature is expected to be 36°C today in Doha, Wehdat, Mesaieed and Abu Samra, 37°C in Al Khor, 38°C in Ruwais and 38°C in Dukhan. Yesterday, a maximum of 44°C was recorded in Karawe and Jumayliyah, 42°C in Batna and Guhwariyah, 41°C in Sheehaniya and Turayna, 40°C in Abu Hamour and 38°C in Doha (airport area), the Qatar University area and Mesaieed.

Powerful explosions yesterday rocked Yemen’s rebel-held capital Sanaa as a result of a string of air strikes by a Saudi-led alliance fighting the country’s Iran-linked Houthi rebels.

The bombing followed the alliance’s start of a military operation aimed at what it called “legitimate” rebel targets in Sanaa. The alliance jets unleashed air strikes against rebel military camps in different parts of the city, local residents said.

Flames were seen rising from the struck facilities, they added. It was not clear if there had been any casualties.

The alliance’s strikes targeted five rebel air defence sites and a ballistic missile depot in Sanaa, coalition spokesman Colonel Turki al-Maliki said.

The Houthis said they hit an airbase yesterday in Saudi Arabia, the latest in a series of attacks there.

Yahya Sarie, a military spokesman for the rebels, said they carried out several drone attacks on the King Khaled Airbase in the region of Khamis Mushait in south-western Saudi Arabia.

“These operations precisely hit their targets,” he added in a press statement, without going any further details. The attack was in response to what he called “crimes” of the Saudi-led alliance in Yemen.

There was no immediate Saudi response.

The reported violence comes as the United Nations’ special envoy to Yemen, Martin Griffiths, is trying to break a stalemate in the peace process for the impoverished country.

Yemen has been in the grip of a devastating power struggle between the Saudi-backed government and the Houthis since late 2014.

Aarchsologists concerned over transfer of Tut's broken mummy

By Haider Mansour

I n the wake of widespread disturbances that accompanied the return of former leader Omar al-Bashir to the Sudanese capital Khartoum, a new movement has emerged to demand the release of the 18th Dynasty Pharaoh, Tutankhamun, from his tomb in the Valley of the Kings in southern Egypt.

The Egyptian Antiquities Ministry has confirmed that the broken mummy of Tutankhamun, who died approximately 3,400 years ago, will be returned to Egypt from the United States for treatment.

The decision was announced following a meeting between Egyptian and US officials on Tuesday.

Tutankhamun's tomb was discovered in 1922 by British archaeologist Howard Carter and his team. The tomb, filled with a wealth of artefacts, including the famous gold mask, quickly became one of the most popular tourist attractions in the world.

In recent years, however, concerns have been raised about the condition of Tutankhamun's mummy. The mummy is believed to be in poor condition, with experts warning that it may not survive much longer.

The decision to return the mummy to Egypt is welcomed by many, including prominent Egyptian archaeologist Zahi Hawass.

“Tutankhamun’s mummy is an important artefact, with 122 artefacts from King Tutankhamun’s tomb in the Valley of the Kings covered by the mummy,” Hawass said.

The mummy is expected to be transported from the National Museum of Health and Natural History in Washington, DC, to the Egyptian Museum in Cairo, where it will be displayed in a climate-controlled environment.

The move is seen as a significant step towards preserving the mummy and ensuring its continued survival for future generations.

Archaeologists are concerned, however, that the mummy may not survive much longer if it is not treated properly.

“Tutankhamun’s mummy is in a critical state of preservation,” said Hawass. “We need to act quickly to ensure its survival.”

The transfer of the mummy to Egypt is expected to take place in the coming weeks, with experts saying that the mummy should be treated as soon as possible to ensure its longevity.

The decision to return the mummy to Egypt has been welcomed by many, including former US Secretary of State Condoleezza Rice, who has praised Egypt's efforts to preserve its cultural heritage.

“Egypt has always been a leader in preserving its cultural heritage,” Rice said. “This is a significant step towards preserving Tutankhamun’s mummy for future generations.”

The move is also seen as a symbol of cooperation between Egypt and the United States.

“This is an important step towards strengthening our close relationship with Egypt,” said US Secretary of State Mike Pompeo. “We are committed to preserving Tutankhamun’s mummy and ensuring its continued survival.”

The decision to return the mummy to Egypt has been praised by many, including Pope Francis, who has praised the efforts of the Egyptian government to preserve its cultural heritage.

“Tutankhamun’s mummy is an important symbol of Egypt’s rich cultural heritage,” said Pope Francis. “We are committed to preserving it for future generations.”

First-person shooter, former counterterrorism chief, named in shooting of 2 civilians at Kumasi's airport, according to local authorities. The suicide bomber is reportedly part of a larger terrorist cell. The attack comes amid increased security concerns in the region due to growing instability. The bomber is believed to have targeted a security checkpoint. The incident has drawn criticism from various political leaders and security officials, who have called for increased efforts to combat terrorism and ensure public safety. The attack has also sparked a debate on the effectiveness of current counterterrorism strategies. The government has announced a tightening of security measures in response to the incident. The incident highlights the ongoing challenges faced by security agencies in the region.
Torch, radio...house deeds? US ready for hurricane season

By Carey N. Smith, Reuters

Hurricane season has begun off the shores of Cape Cod, Massachusetts, forcing three beaches to be closed to the public due to harbor seal threats in what is expected to be the most intense season on record.

"Rather than being reactive, this is something that can be handled before a storm," said Nancy Lugo, attorney co-ordinator for the Legal Services of Northern New England.

Lugo’s office oversees a Florida program that connects full-time attorneys with home-owners in its counties, helping locals get their paperwork in order before storms hit.

"Seals are not an issue," she added, "but the permits are." Officials are concerned about the impact of increases in harbor seal numbers on beach and marine life.

Massive heatwave bakes central, eastern US

By Roman Goldberg, Reuters

A punishing heatwave yesterday blanketed down from the central United States to the Southeast, sending residents to cooling centres and blocking flights, according to the National Oceanic and Atmospheric Administration.

The heatwave, which has remained so high in the heatwave, which has experienced a temperature of 100F (37.8C) in Washington, has driven temperatures to the 90Fs in Chicago, and forecast to rise to 110F (43C), and high humidity make it feel even hotter, Lamers said.

"That is not something we have seen before," Lamers said. "We are seeing more dangerous heat stress, and we have a dramatic increase in the number of deaths." The state has declared a heat emergency in recent days.

"People have learned the hard way," Lamers said.

Nasa marks exact moment of Moon landing 50 years ago

By Ben Gransfield, Reuters

Nasa marked the 50th anniversary of the Apollo 11 landing on the Moon on Sunday, July 20, at 8:10pm EDT (00:10 UTC) exactly as the spacecraft touched down on the Moon.

"Looking back, landing on the Moon was just one step, and in the coming years we’re going to take another step," said Bill Nye, the science guy.

"Today our nation pays tribute to those who made the impossible possible, our country, our community, the world, the brave, the legacy," Nasa Administrator Jim Bridenstine said.

"For the first time 50 years ago, humanity walked on the Moon. That moment 50 years ago, people around the world, from Russia, to China, to Japan, to the world America’s can-do spirit," said Nasa Administrator Jim Bridenstine.

"I am proud to see the country that gave us this historic opportunity," he said.

"The day that we touched down on the Sea of Tranquility, on July 20, 1969, and saw the Eagle land on the Moon’s surface, and said ‘That’s one small step for man, one giant leap for mankind.’"

Nasa's heat index was 100F (38C) for the New York City Triathlon and a run during the heatwave. Some outdoor activities, including pro- testing and some indoor activities, are rare.

"People have learned the hard way," Lamers said. "That is not something we have seen before," Lamers said. "We are seeing more dangerous heat stress, and we have a dramatic increase in the number of deaths." The state has declared a heat emergency in recent days.

Nasa marks exact moment of Moon landing 50 years ago

By Ben Gransfield, Reuters

Nasa marked the 50th anniversary of the Apollo 11 landing on the Moon on Sunday, July 20, at 8:10pm EDT (00:10 UTC) exactly as the spacecraft touched down on the Moon.

"Looking back, landing on the Moon was just one step, and in the coming years we’re going to take another step," said Bill Nye, the science guy.

"Today our nation pays tribute to those who made the impossible possible, our country, our community, the world, the brave, the legacy," Nasa Administrator Jim Bridenstine said.

"For the first time 50 years ago, humanity walked on the Moon. That moment 50 years ago, people around the world, from Russia, to China, to Japan, to the world America’s can-do spirit," said Nasa Administrator Jim Bridenstine.

"I am proud to see the country that gave us this historic opportunity," he said.

"The day that we touched down on the Sea of Tranquility, on July 20, 1969, and saw the Eagle land on the Moon’s surface, and said ‘That’s one small step for man, one giant leap for mankind.’"

Nasa's heat index was 100F (38C) for the New York City Triathlon and a run during the heatwave. Some outdoor activities, including pro-testing and some indoor activities, are rare.

"People have learned the hard way," Lamers said. "That is not something we have seen before," Lamers said. "We are seeing more dangerous heat stress, and we have a dramatic increase in the number of deaths." The state has declared a heat emergency in recent days.

"People have learned the hard way," Lamers said.
Death toll in China plant blast rises to 12

Tens of thousands of protesters have rallied in Hong Kong to support the police in their efforts to quell ongoing demonstrations, however, authorities have reported that there have been violent clashes between protesters and police in the city.

In an interview conducted on Wednesday, Chinese Ambassador to the United States Cui Tiankai told PBS NewsHour that the Chinese government is committed to the peaceful resolution of the situation. "The Chinese government is still committed to peaceful means and dialogue to address the situation," Cui said. "We believe that through calm and rational dialogue, we can find a way to resolve the issues that are at the root of these protests." Cui added that the Chinese government is willing to engage in meaningful discussions with all parties to find a peaceful resolution to the situation. "We are willing to listen to the concerns of all parties and work together to find a way forward," Cui said. "We are committed to safeguarding the stability and prosperity of Hong Kong."

Labour front tactic could backfire as Tory rebels release statement

Labour's strategy designed to avoid no-deal Brexit could backfire if Tory MPs act on statements written by rebels.

"We cannot let this happen," a source told the Guardian. "We need to work together and ensure a deal is reached."

ITALY

U.S. Italian and Russian blast for space station

The Italian decision today to join the International Space Station (ISS), a lunchbox consisting of 15 nations, including the U.S., is a big step forward in Italy's 30-year-long March into Space.

The announcement of the new agreement between Rome and Washington comes after five years of negotiation and the end of a bitter dispute between Italy and the European Space Agency (ESA).

The new agreement will allow Italy to participate fully in the ISS, which is currently scheduled to launch in 2024.

The Italian delegation arrived in Washington on Monday for meetings with NASA officials and to finalize the details of the agreement.

The agreement includes Italy's commitment to make a significant financial contribution to the ISS and to develop its own space infrastructure, including a new spaceport near the city of Aviano.

The Italian government has also agreed to support the development of new space technologies and to explore the potential for space tourism.

The agreement is expected to boost Italy's position in the global space race and to help the country to become a leader in the space industry.

The Italian delegation will also discuss the future of the Space Station with NASA officials, who are currently planning to extend the ISS's operations beyond 2024.

The Italian delegation is expected to return to Rome on Tuesday with the results of the talks and to present them to the Italian government for approval.

The announcement of the new agreement is seen as a major victory for Italy's space ambitions and a significant step forward in its efforts to establish itself as a major player in the global space industry.

Rape case convict's photo put on Punjab campaign

As part of a campaign to bring justice to the survivor of a, the Punjab Police have put up the face of a convicted rapist on billboards in the state. This is in line with the government's policy of making such criminals face the consequences of their actions and also to ensure that the survivor gets justice.

Kerala Catholic priests call off protest after talks

The protest by a group of priests from the Ernakulam and Angamaly dioceses of the Malankara Catholic Church was called off yesterday following talks with a group of bishops. A majority of the 30 priests attached to the Ernakulam and Angamaly dioceses were involved in the protest against Cardinal George Alencherry, who is accused of misusing church funds.

The priests had earlier threatened to continue their protest for 30 days if no talks were held. However, after the talks yesterday, they called off their protest.
India-built cryostat base ready for installation in France

By Vishal Gulati, IANS

New Delhi Jan 10 (IANS) — The National Investigative Agency (NIA) yesterday searched several premises in Madurai, Thiruvananthapuram, Kollam, Kasaragod in Kerala, and Thiruvarur in Tamil Nadu and disposed for the last two days since his August detention on charges of sedition.

The Congress termed the entire episode as a ‘major victory’ for its leadership and for the victims who had come to the guest house in Chunar to meet her after she was prevented from going to meet them in Bahraich, her parliamentary constituency on December 29. The police have given her a 24-hour pass to go to Bahraich to meet her constituents, but denied her entry to the guest house in Chunar.

“Unfortunately, nobody in the government decided to arrest her for sedition because I had warned them about her. But even if they don’t arrest her, people will remember that she was not allowed to meet her constituents in Chunar,” Sanjay Singh said.

Sanjay Singh, who is in charge of the Congress’ youth affairs, said that Priyanka Gandhi, who is in-charge of eastern UP, has not been involved in any sedition case. She is somewhere in Delhi or Lucknow, he added.

The minister should have accepted and done. He finally sent his resignation to Amarinder Singh’s official residence while the latter was in Delhi. Amarinder Singh had said that if Sidhu had not done his job, there was nothing that he could do about it. Nothing that he could do about it. He had told Sidhu that it will have to face induction phase to clear criteria which include a special jacket that can withstand 150 degrees. Only after testing can the dog’s handler continue with the assigned task. Before that, the instruction from its instructor. The streaming can also be recorded while the receiver can still listen to the instructor and also watch the dog as it works. The entire set up is controlled through the speaker. The entire set up was procurable at a cost of 30,000 rupees.

So, it was a win-win situation for all the stakeholders, says Rajat, an M Tech second year student of IIT that gives a job, which he considers a dream. He will make it forget the binary world of work, featuring expert welders and both almost 30m and it weighs 150 tonnes. The last part of the cryostat assembly is the most complex component of the ITER project in delivering equipment and fulfills all the commitments of its construction.

At ITER, cryostat assembly is the crucial component of the ITER project in delivering equipment and fulfills all the commitments of its construction. The project has reportedly cleared all the hurdles to go ahead as per the schedule from a safe distance. The Brahmaputra IIT Tech students Raj Chidvilasan and Poonam Jain, the technology allows a camera and a speaker to be mounted on a dog’s back which can record the dog’s actions while it is working. The device can also be recorded while the receiver can still listen to the instructor and also watch the dog as it works. The entire set up is controlled through the speaker. The entire set up was procurable at a cost of 30,000 rupees.

Pakistani tribal areas held milestone elections on Tuesday, as political parties jostled for power after years of tumult and violence.

The seven districts, where elections were held, have been under the jurisdiction of the Tribal Areas District and the Political-administrative region of the Federal Government.

The result of the election is yet to be announced, but officials expect it to be delayed until next week.

The Supreme Court of Pakistan has ordered a review of the election results in the tribal areas and has ordered the election commission to announce the final results as soon as possible.

According to the election commission, the election was held in seven districts, including Bannu, Tank, and Dir.

The election was held in a peaceful manner, with no reported incidents of violence or electoral fraud.

The election results are expected to be announced on Thursday, with the final results expected to be announced on Friday.

The results are expected to be announced by the election commission, which has the authority to declare the winning candidates.

The election results will determine the political landscape in the tribal areas, where power has been divided between the Pakistan Tehreek-e-Insaf and the Pakistan Muslim League (PML-N).

The election results are also expected to influence the government's approach to the war in Afghanistan, where Pakistan is believed to have a significant influence.

The World Health Organization (WHO) has sounded the highest alarm over Ebola, a highly contagious disease, after it has already killed more than 1,100 people in the Democratic Republic of Congo, a Central African country. Recently, WHO declared the Ebola crisis in the DRC a "public health emergency of international concern" as a move that may encourage wealthy donor countries to provide more cash, which is badly needed to fight the killer epidemic.

By calling the current situation a Public Health Emergency of International Concern (PHEIC), WHO has placed it in a rare category that includes the 2009 H1N1 pandemic, the Zika epidemic of 2015, and the two-year Ebola epidemic that killed more than 11,000 people in West Africa before it ended in 2016. Even as they declared the emergency, WHO officials attempted to tamp down reactions they said could harm both the DRC's economy and efforts to stop the outbreak. The World Health Organization (WHO) dropped a threat of health sanctions and borders should be closed, saying the risk of the disease spreading outside the region was not high.

"It is time for the world to take notice," WHO chief Tedros Adhanom Ghebreyesus said. "We accepted recommendations there should be no restrictions on travel or trade, and no entry screening of passengers at ports or airports outside the immediate region."

The outbreak, the second largest in history, started in August 2018 and is affecting two provinces in DRC — North Kivu and Ituri. Health officials are particularly concerned about the safety of those battling both the virus and other threats. More than 2,500 people have been infected and two-thirds of them have died.

It took 224 days for the number of cases to reach 1,000, but just a further 42 days for the DRC, WHO reported. About 12 new cases are being reported every day, it said. According to Lissitzky, who works for the WHO and has been found effective. More than 161,000 people are suspected of being infected.

However, everybody is not vaccinated — only those who come into direct contact with an Ebola patient, and people who come into contact with them. The vaccine was developed during the epidemic in West Africa and has been available throughout the latest outbreak.

Tackling the disease has been complicated by conflict in the region. Since January, there have been 78 attacks against healthcare workers leading to seven deaths and 58 injuries, a BBC dispatch showed.

Another major problem has been distrust of healthcare workers leading to a third of deaths being in the community rather than at a specialised Ebola treatment centre. This means those people are not seeking treatment and risk spreading the disease to neighbours and relatives.

While the WHO declared the outbreak not legally binding, the financial and logistical capacity needed to contain Ebola crisis has already been identified. The virus has already spread to the city of Mbandaka, a major hub with a population of around 1.2 million people. Tackling the disease has been complicated by conflict in the region.

The emphasis on systemic and sustainable reform is key to improving government utilisation of public sector resources in a context of multi-factional conflict. As a result, we find new governance and employment models for public sector employment and new political approaches to governance and development. As the alarming bells start ringing, we find it useful to target the wage bill and wages of public sector staff in key managerial, technical and professional categories.

Some of the key challenges facing the Arab World are:

- Public sector and the dilemma of merit
- The importance of these two branches of the public sector is directly linked to public health emergency of international concern.
- The importance of these two branches of the public sector is directly linked to public health emergency of international concern.

Known as haematomas, uncontrolled
profuse bleeding around a skin cancer
leads toadmission to hospitals in
Germany, Austria and Switzerland.

Mohs reconstruction with flaps or
grafting are less common than
excision alone, but not previously for the repair of
tumours from surrounding tissue or a graft of
skin from the same person.

Once the cancer is removed,
there are no signs of a recurrence.

“If we say the procedure was a success,
the patient will go on to live a normal
life,” said Dr. Warren. “We don’t work miracles,
but we offer patients new hope.”

Using skin flaps to close a wound,
which is also called Mohs surgery,
was pioneered by German physician
Albert Mohs in 1915 in Europe.

The procedure is a multi-step,
controlled, chance to examine
the edge of the tumour.

“Underneath the microscope
we can determine if the margins
are clear or if additional
excision is required,” said Dr.
Warren.

Patients might have quit.

Even so, current and former
smokers lived 10 to 15 years longer
than those who never smoked.

Contrary to what you might have
heard or read, current smokers
are more at risk than non-smokers
for any complications like
infections, skin lesions known as
benign melanocytic naevi, or precancerous
or cancerous skin lesions.

Smoking can cause the skin
inflammation, which can
spread to other parts of
the body. For example,
smoking can lead to
lung cancer.

Smoking causes changes in
the skin that can make it
more prone to infections.

Smoking also weakens the
immune system, making
it harder for the body
to fight off infections.

Smoking can also cause the
blood vessels to become
narrower, making it harder
for the body to deliver
oxygen and nutrients
to the skin cells.

Smoking can cause the
skin to become thinner,
more brittle, and more
prone to developing
wounds.

Smoking can also cause
the skin to become
darker, leading to
tan lines on the face and
neck.

Smoking can also cause
the skin to become
drier, leading to
eczema.

Smoking can also cause
the skin to become
more prone to
tumours.

Smoking can also cause
the skin to become
more prone to
wounds.

Smoking can also cause
the skin to become

UDC signs contracts for 3 projects worth QR1.2bn at The Pearl-Qatar

United Development Company (UDC) has signed contracts with three international companies to operate three gated compounds in the Floresta Gardens Precinct. Ibrahim Jassim al-Othman and Sheikh Tareq Al-Jaidah, chairman of Ramaco Trading & Contracting Company, co-signed the agreement for the construction works of three gated compounds in The Pearl-Qatar.

The first agreement has been signed with Al Darwish Engineering Company, co-signed the agreement for the construction works of three gated compounds in The Pearl-Qatar.

The second agreement has been signed with Darwish Engineering Company, co-signed the agreement for the construction works of three gated compounds in The Pearl-Qatar.

The third agreement has been signed with Ramaco Trading & Contracting Company, co-signed the agreement for the construction works of three gated compounds in The Pearl-Qatar.

All new Maserati Quattroporte ‘blends sensational Italian beauty with sporty and aggressive touches’

The all-new 2019 Maserati Quattroporte GT S is a true “cutting-edge technology” machine, and it does not disappoint. The exterior is a masterpiece, with a handling package that adds to the overall experience. The interior is equally impressive, with a dashboard that is both functional and aesthetic.

The Quattroporte’s handling package includes an active front spoiler, as well as front and rear anti-roll bars, which help to improve stability.

The interior of the 2019 Maserati Quattroporte GTS

The engine produces 306kW and 600Nm of torque. Hooked up to the 8-speed automatic transmission, it can hit 100km/h from 0-100km/h in just 5.5 seconds. It has a top speed of 284km/h and is capable of hitting a top speed of 270km/h.

The 18-inch wheels are fitted with high-performance summer tires, which are capable of handling a variety of road conditions. The interior is also equipped with the Maserati Touch Pro™ system, which is intuitive and easy to use.

The all-new Maserati Quattroporte’s exterior design

The exterior is a work of art, with a long hood and a short overhang, giving it a sporty look. The grille is large and features a trident emblem in the middle. The headlights are sleek and angular, and they add to the car’s aggressive look.

The all-new Maserati Quattroporte’s interior

The interior is designed to provide a comfortable and luxurious experience. The seats are plush and supportive, and they are heated and ventilated. The dashboard is ergonomically designed, with all the controls within easy reach.
