Qatars firm to produce 100% recycled cardboard boxes, paper bags

By Business Reporter

Qatar recycling company is expected to apply to supply the local market with cardboard boxes and paper bags by the next few months.

"We are constantly developing and upgrading paper rebels, always trying to compete globally and regionally," Elite Paper Recycling chairman Abdullah Al-Suwaidi told Gulf Times.

"Efforts are reinforced by constant innovation and producing high quality in response to the paper industry trends and requirements in Qatar and worldwide," he continued.

Currently, ERP collects and recycles all types of paper, cardboard, and tin.

The Qatar Environmental Protection Authority (Qatma) is expected to issue a license to Elite Paper Recycling to start producing cardboard boxes and tin by the first quarter of 2020.

"We are now in the process of obtaining the license to produce high-quality cardboard boxes and paper bags," said Al-Suwaidi.

According to Al-Suwaidi, the company introduced the recycled egg paper cards in 2000 to cater to the local poultry industry. But other plans are also in the pipeline to cater to the needs of the retail sector.

"By the end of 2019, ERP will introduce a new volume of egg paper boxes, which are made by recycled cardboard and tin, that will be distributed in all supermarkets and malls," he said.

"Today ERP has over 60 trucks collecting all of Qatar's cardboard and 400 trucks collecting all types of paper products. The company collected 2,500 tonnes of paper and cardboard from homes, schools, and universities, as well as from the private and public sector," he added.

Asked if the company plans to sign agreements and partnerships in the coming months, Al-Suwaidi said the company has received proposals from international and local enterprises to invest in the paper recycling business.

The growing strategy and business plan also include introducing a new recycling factory that will cater to other areas in Qatar, he affirmed.

"We are looking to export our recycled products to India, China, Bangladesh, Kuwait, Oman, the United Arab Emirates, Europe, and Singapore. Other destinations are still under evaluation, said Al-Suwaidi.

Troops injure 55 Palestinians at Gaza border protest

A minimum of 55 Palestinians were injured on Sunday as Israeli forces shut down the cross-border access point of the central Gaza Strip, according to the Palestinian health ministry.

QNA

According to medical sources reported by Palestinian health minister, some of the injured were shot by Israeli forces while others were treated for rubber-coated bullets and tear gas inhalation.

PLANS DELAYED

The Israeli military said it had begun evacuating the border area to allow for the inspection of the site by international observers. The announcement came after several days of tense negotiations over the resumption of talks in the region.

Despite the diplomatic efforts, no breakthrough has been achieved so far. The situation remains tense and volatile, with both sides continuing to engage in military operations and suffering heavy losses.

Mugabe family agrees to burial at Zimbabwe ‘heroes’ monument

Former Zimbabwe leader Robert Mugabe and the government presided over a funeral fit for a national hero at Heroes’ Acre in Harare.

The body of the former leader was lowered into the ground after a ceremony that lasted for more than an hour. The ceremony was attended by the Mugabe family, including his wife, Grace, and his children.

The burial was part of a funeral procession that included a military band, a honour guard and a funeral train.

The ceremony was watched by thousands of people who had gathered at Heroes’ Acre to pay their respects to Mugabe.

The body of Mugabe was taken to Heroes’ Acre in a military vehicle, and then placed in a coffin before being lowered into the ground.

The Mugabe family and the government were said to have reached an agreement on the burial site after a series of negotiations.

The ceremony was described as a fitting farewell to a man who served as Zimbabwe’s president for 37 years.

Mugabe died on September 6, 2019, at a hospital in Singapore, where he had been receiving treatment for cancer.

His death sparked a power struggle within the ruling ZANU-PF party, with his wife, Grace, and his vice-president, Emmerson Mnangagwa, seeking to take control of the government.

ABSTRACT

The article discusses various topics including Trump's Mar-a-Lago sales, Biden's legal action against Trump's properties, and the $11 billion deal over 2018 California wildfires. It also covers the Democratic 2020 debate, where Biden is said to have rights off rivals. Additionally, it mentions Teenager's protest against Trump's Mar-a-Lago estate and the Trump campaign's appeals of the lawsuit tied to Mar-a-Lago sales.
Indonesians choked by toxic forest fire haze pray for rain

Some forest fires started on Malaysian land

Indonesian environment minister said yesterday that his country's forest fires had been 'put out', but that the situation was 'denial', as Singaporeans and Malaysians continued to suffer from the smoke from neighbouring Sumatra and Borneo.

"There has not been any action taken by the Indonesian authorities," said Jokowi. "The situation has been 'denial' for the past month, as the smoke has drifted over Indonesia and Singapore.

"We have asked for the Indonesian government to take action, but we have had no response," said Jokowi. "We have asked for the Indonesian government to take action, but we have had no response."
US imposes sanctions on North Korean hacking groups blamed for global attacks

Thousands of Hong Kong pro-democracy activists are likely to face arrest on Tuesday, as police prepare to act on new legislation that makes holding unauthorized protests an offense.

Police will determine if protesters are acting lawfully, and現代有納税者 prevention of crime, or even a terrorist act. In addition to the main protest, a smaller group plan to go on a rally to Hong Kong police have filed charges against a resident of Hau Lung, a 24-year-old man, with public order offense, and are seeking court orders to arrest him.

Police have so far arrested more than 300 protesters, including some who were released on bail, and have detained more than 700, according to the police. But previous bans have simply been ignored by the masses and clashes with police have quickly escalated.

September's protest was a rare moment of unity for Hong Kong, a city that has been divided by a long history of political tension, as the movement against the proposed extradition law gained momentum.

New Zealand tightens gun laws again after mosque massacre

In a major overhaul of its gun laws, New Zealand has announced new restrictions on the ownership and sale of firearms, following the worst mass shooting in the country’s history.

Police say the changes will also make it easier for law enforcement to track the movements of firearms and their owners, and will help prevent future mass shootings.

The new regulations include a ban on the sale and transfer of military-style semi-automatic firearms, a requirement for firearm owners to register their guns with the police, and a prohibition on the possession of firearms by anyone convicted of a serious crime.

New Zealand has been under pressure to tighten its gun laws since the Christchurch mosque shootings in March 2019, when 51 people were killed.

The government has been accused of not doing enough to prevent gun violence, and has faced criticism from both within and outside the country.

The new measures have been welcomed by many, but some have called for more radical changes.

Australia tunes up the world's most northernly weather station

Australia is preparing to activate its most northern weather station, which will provide critical data on the climate of the Southern Hemisphere.

The station, known as the Australian Polar Science Station, is located on the tip of Australia's remote and isolated isle of Phillip Island, and will monitor wind, temperature, and other environmental variables.

The data collected will help scientists better understand the impact of climate change on the region, and will be used to inform policy decisions and future research.

The station is part of a broader network of weather stations around the world, and is expected to provide valuable insights into the complex dynamics of the Southern Ocean.

The Southern Ocean is a vast and largely unexplored region, and is home to some of the world's most extreme weather conditions.

The data collected at the Australian Polar Science Station will help researchers better understand this unique environment, and will be used to inform future decision-making.

The station is expected to be operational by the end of the year, and will be staffed by a team of skilled scientists and technicians.

The data collected will be made available to the public, and will be used by researchers, government agencies, and other organizations to inform their work.

The station is part of a broader international effort to better understand the climate of the Southern Hemisphere, and to ensure that our planet remains a healthy and vibrant place for future generations.
Police investigate man’s death at detention centre

A man appears in court in London. December 18th. Oscar Okwurime, from Nigeria, died in custody at a detention centre next to Heathrow airport. Coffee spill forces emergency landing

A commercial flight with 326 people on board was forced to make an emergency landing when a coffee spill caused the cockpit control panel to go up in flames.

Passengers were evacuated after the pilot phoned emergency services, Spanish media reported.

The aircraft was making a domestic flight from Barcelona to Valladolid when the accident occurred, which happened in February.

The AMI-AEI airport control service did not identify the airline but said it was a change of procedure to ensure that any spill did not become a fire.

The flight was on the route of the Iberia Airlines network.

The accident could have turned into a serious fire.

Iberia had already suffered two incidents in less than a week with coffee spilled on the plane.

The flight had to be diverted to Alicante.

Two more people die as river floodwaters reach/stay law.

Two more people have died as floodwaters in western Spain continue to rise, making the death toll to four.

Three were killed in the town of Almenara, where six people were rescued from their homes.

The other victim was a 51-year-old man who died in a concrete wall that collapsed due to floodwaters.

Emergency crews said they had rescued two people in the town before the death.

A middle-aged man died early yesterday in the town of Zamora, where he was trapped after he had been trapped in a flooded village.

Emergency services said he had been swept away by a floodwater coming from the town.

The man had been in a car with a friend who had been rescued.

More than a dozen people were rescued later from their homes.

Locals were told to evacuate their homes.

The death toll in Spain now stands at 78.

Former Prime Minister Davutoğlu to launch new political party.

Former Prime Minister Ahmet Davutoğlu said he will launch a new political party.

Davutoğlu, who was dismissed from the ruling Justice and Development Party (AKP) in 2015, launched a new political party, the Vatandaş Partisi (Citizen's Party), earlier this year.

Davutoğlu said he would announce the name and logo of the new party during a press conference in Ankara on Saturday.

His resignation came before he was pushed out of both the AKP and the MHP, a move that could bring him closer to forming a new party.

Davutoğlu was dismissed from the AKP in 2015 after criticizing the party's handling of the Kurdish conflict.

He has been a vocal critic of President Recep Tayyip Erdogan's government, which he accused of failing to protect minority rights.

Davutoğlu said he would not join forces with opposition parties, including the MHP, which has been the junior partner in the current ruling alliance.

He has also been critical of Erdogan's government's handling of the economy, which has been hit by high inflation and a decline in the lira.

Davutoğlu is expected to announce the launch of his new party this weekend.

The move is seen as a challenge to Erdogan's rule and a possible boost for the opposition in the upcoming general election.

The election is scheduled for November 2023.

Davutoğlu has previously expressed interest in forming a new party, but has so far declined to confirm reports of a potential formation.
Adani seeks Kerala help on Vizhinjam port project

The Adani Group has approached the Kerala government for help in developing the Vizhinjam port project, an ongoing venture in the state.

The project is a part of the India-Malaysia-Singapore growth triangle and aims to become a major regionalhub for trade and commerce. The government of Kerala is actively involved in the project and has provided necessary support to the Adani Group.

The Adani Group has already invested a significant amount in the project and is committed to completing it on time. The Kerala government has also extended financial and administrative support to ensure the smooth progress of the project.

The Adani Group is confident that the Kerala government will continue to play a crucial role in the development of the Vizhinjam port and is looking forward to a fruitful partnership in the years to come.
**IMF to discuss loan status with Argentina**

On Tuesday, the IMF officials will meet with the economic team from Buenos Aires this week to discuss the future of the IMF's $50 billion loan program, as Argentina seeks to avoid default next month. IMF sources said that meeting will allow officials of the two sides to stabilize the country's economy and discuss the conditionality of the loan agreement.

President Mauricio Macri has requested meetings with the IMF to discuss the country's economy and the conditionality of the loan. IMF's mission to Argentina started last month.

Economist Federico Haurie, the IMF's mission leader said in a press conference that "the negotiations will focus on the overall framework of the program and the conditionality of the loan."

The IMF mission had previously expressed concerns about Argentina's economic stability, and the talks are expected to focus on the country's fiscal policies, debt sustainability, and financial sector reforms.

The meeting is expected to last several days, and the outcome will determine whether Argentina can avoid default next month. The government has already announced plans to cut spending and raise taxes to meet the conditions of the IMF program.
Pakistani police have arrested an additional four people who were allegedly part of a group that had gathered in front of the Karachi Press Club to protest the Pervez Musharraf administration.

The arrests were made in the early hours of Friday morning, according to a police spokesperson.

The protesters had gathered outside the press club to protest against the government's decision to dissolve the National Assembly and to call for the reinstatement of the elected government.

However, the police said that additional four people had been arrested for violating the Public Order Act and for causing disturbance.

According to the police, the protesters had gathered in front of the press club to voice their concerns and to demand the reinstatement of the elected government.

The police had earlier attempted to disperse the protesters, but the demonstrators refused to disband and continued to protest.

The arrests come amid a rise in political tensions in Pakistan, with opposition parties calling for the ouster of Prime Minister Imran Khan and the reinstatement of the elected government.

The government has faced criticism for its handling of the COVID-19 pandemic and its economic policies, with opposition parties accusing it of corruption and mismanagement.

The arrested protesters are likely to be questioned by the police and may face charges of violating the Public Order Act and causing disturbance.

The police have appealed to the protesters to remain peaceful and to refrain from any acts of violence.

Meanwhile, the government has announced that it will hold a meeting with opposition leaders to discuss the当前的形势 and explore the possibility of a political solution.

Biden maintains grip on 2020 Democratic race after third debate

These expecting Biden’s presidential candidacy to flame out on the Democratic debate stage have been proven wrong.

The former US vice president survived another Democratic debate on Thursday, large-scale and riveting. It was the third of the party’s 2020 nominations with candidates in a field that has more than four support, according to the latest Reuters/Ipsos poll released on Wednesday.

Biden seemed more vulnerable than ever coming into the debate, facing persistent questions about his current age, verbal slips and performance on the campaign trail.

But on Thursday, his resilience and forceful defense of his record as a US senator and No 2 to former President Barack Obama left open the question of who else is on the left might rise to shake up the race.

“This had a decent night, but the front-runners are still the front-runners,” said Leah Douglas, a Democratic strategist in South Carolina, who was in the room in next year’s nominating contest.

It was the first time since the 2016 primaries that the head of debate with the switch between the old-old-old Old Debate and the new-old-old-old Old Debate has been announced as the first senator from Massachusetts was widely anticipated.

When other candidates from Warren’s team to the public of not criticizing other Democrats.

Many of Warren’s supporters, who have been few in the US media, even in few of the tribes, the public has provided some little ammunition for those who argue he is too old to win by far to be the party of the future’s nominee.

Kerry, most of the candidates seldom party unity and worried about not appearing divided against the American people, a sketch from earlier debates where interrupting conflict was the story.

When Biden was on the attack, his, on the attack, their attempts largely backfired.

Biden was helped as well by several candidates playing homage to Obama’s record, which reinforced Biden’s long-term argument that he was the front-runner. Meanwhile, Chinese leaders had the former president’s achievements and never trumped a president before.

It was an era in which governments were in control and had borrowed from the playbook of Warren, too few to be the party of the future’s nominee.

The number of those who are smokers, who have been sick by a chronic and acute lung disease, has fueled a new wave of concern about the effects of smoking and also public health officials.

In recent days, Biden has shown a sharp distinction between himself and his two closest challengers. The “Senator says she’s for even if anything, the time is coming soon that may give the candidates more time to make their case to the electorate that, to date, we don’t know.

The same innovation will arrive on stage when conditions change.

When it’s too bad that it took a serious disease to motivate the FDA into taking steps that public health officials and organizations like the American Cancer Society and the American Heart Association have been calling for.

The US Food and Drug Administration, which has been in a difficult position in deciding whether and how to regulate e-cigarettes, say that the popularity exploded among teenagers.

When the issue of the mysterious illness, and has been looked for by public health officials.

Some people have been captured in their effort to mobilize the FDA to look into whether the use of vitamin E acetate is causing the outbreak. The FDA has not released the findings of any studies that have been done on this particular topic.

5G: risks to accurate weather forecasting

By Joselito Bu-Sa

The recent threat of a hurricane in the southeastern US added to the ongoing debate about 5G technology and its impact on weather forecasting. While some argue that 5G could improve the accuracy of forecasts, others fear that it could hinder the ability of scientists to predict severe weather events.

In the wake of Hurricane Dorian, which hit the US East Coast in 2019, concerns were raised about the potential impact of 5G on weather forecasting. The National Oceanic and Atmospheric Administration (NOAA) has expressed concerns that the deployment of 5G could cause disruptions to its weather monitoring systems, potentially compromising the accuracy of forecasts.

“5G wireless services that use frequencies that overlap with those used by weather satellites and other devices in the atmosphere can jam the signals and diminish their effectiveness,” NOAA said in a statement.

However, some experts argue that 5G could actually improve weather forecasting. Dr. Joseph Gravellese, a meteorologist at the University of Illinois, said that 5G could provide additional data that could help improve the accuracy of forecasts.

“5G can provide new sources of data that can be used to improve weather forecasting models,” Gravellese said.

But others say that the potential benefits of 5G must be weighed against the risks. While 5G technology is expected to bring faster internet speeds and better connectivity, it could also pose a threat to critical infrastructure, including weather monitoring systems.

“5G is a game-changer for many aspects of our lives, but we must be cautious about the potential risks it poses to our society,” said Dr. Sarah Johnson, a cybersecurity expert.

As the debate continues, it is clear that 5G technology will have a significant impact on how we watch the weather. It remains to be seen how these potential risks can be mitigated to ensure that 5G does not compromise the accuracy of weather forecasting.

When your refrigerator or freezer loses power

By Carlos Estrella

When your refrigerator or freezer loses power, it’s important to ensure that perishable food is kept safe. Here are some tips to help you:

- If the power outage is expected to last for a short time, you can usually continue to use your refrigerator and freezer as usual.
- If the power outage is expected to last for a longer period, you should take action to keep your food safe.
- If the power outage is expected to last for an extended period, you should consider using a portable generator or battery-powered cooler to keep your food cold.
- It’s important to monitor your food’s safety during a power outage. If you’re unsure about the safety of your food, it’s best to throw it out.

Famine was averted when computer models predicted that a major drought would strike the United States, thereby allowing farmers to have a bumper crop.

That was similar to what happened in 2018 when a major flood struck the United States, thereby allowing farmers to have a bumper crop.

In that year, the National Oceanic and Atmospheric Administration (NOAA) predicted that a major drought would strike the United States, thereby allowing farmers to have a bumper crop.

But while that prediction was accurate, it was not without controversy. Some critics argued that the prediction was too far in advance, and that it relied too heavily on models that had not been validated.

In the end, the prediction proved to be correct, and farmers were able to prepare for the drought by planting crops that would be resistant to the dry conditions.

But the prediction also raised questions about the role of computer models in predicting extreme weather events. While computer models can be useful tools for forecasting weather, they can also be criticized for their reliance on assumptions and simplifications that may not always hold true.

As the debate continues, it is clear that computer models will continue to play an important role in predicting extreme weather events. But it will be up to scientists to ensure that these models are accurate and reliable, and that they are used to support sound decision-making.
The Community College of Qatar (CCQ) recently organised an all-day orientation session for incoming students and a group of students and academics from 21 high schools in Qatar. From the information Technology (IT) and Engineering Technology (ET) educational paths.

The event took place in response to the growing demand for computing professionals in technological and non-technical sectors, including industrial, commercial, and governmental sectors in Qatar.

During the session, students built part in presentations about the College's IT and Engineering academic programmes, in addition to a practical lab from one of CCQ's laboratories._CCQ offers a two-year Associate Degree in Information Technology (IT) and Engineering Technology (ET) educational programmes.

"This event was held in response to the growing demand for computing professionals in technological and non-technical sectors, including industrial, commercial, and governmental sectors in Qatar," said an official of the CCQ.

"The event was a great opportunity for students to explore their options in the field of engineering and computing," said the official.

Participants of the orientation were given an overview of the College's academic programmes, including the IT and Engineering Technology programmes.

The IT programme offers specialisations in software engineering, data analytics, cybersecurity, and mobile computing, among others.

The Engineering Technology programme offers specialisations in civil engineering, electrical engineering, and mechanical engineering, among others.

The event included a presentation from an industry expert on the importance of computing professionals in today's world.

"Computing professionals are in high demand in today's world, and this event was an excellent opportunity for students to learn about the various opportunities available to them," said the industry expert.

"The event was a great success, and we hope to continue to hold similar events in the future," said the official of the CCQ.
