Qatar skis to witness Jupiter-Saturn ‘great conjunction’

This year, Qatar will witness the closest conjunction between Jupiter and Saturn in 15 of the previous 500 years. This phenomenon, known as the

Om and National Geographic are launching a unique digital “Great Conjunction” event, combining the two planets in a single online experience.
Mathaf and Doha Institute host Visual Arts Studies Third Annual Conference

The Doha Institute, for Graduate Studies (DIS) and Michael, Abdullah Bin Koheil, Museum of Modern Art (Al Museum) of the Qatar National Council for Science, Technology and Innovation, organized the Third Annual Conference of Visual Arts Studies on 18-22 November 2021. The conference, accompanied by an exhibition and a workshop, is the result of a partnership with Al Museum, which will have artists, intellectuals, critics, historians and creators come together to explore the values of the museum and the new opportunities it presents for the future. The conference was held under the patronage of Her Excellency Dr. Sheikha Asma bint Hamad Al Thani, Minister of Culture and Development of the Future, and the participation of 80 respective art and architecture researchers, and was attended by 300 invited guests. The conference included an exhibition dedicated to the works of Emerita stirrings art, curator, and art đoctor, and several presentations and a visit to Al Museum.

The First workshop of the Third Annual Conference took place on 22 November 2021, under the theme: "Toward an International Model of Cultural and Artistic Education: Towards a New Model of Artistic, Curatorial and Research," followed by the second workshop on 23 November 2021, under the theme: "The Role of the Past in Contemporary Art: Towards a New Model of Artistic, Curatorial, and Research." The workshops were attended by 100 invited guests. The conference also included an exhibition dedicated to the works of Emerita stirrings art, curator, and art đoctor, and several presentations and a visit to Al Museum.

Tunisian artist visualizes science in a new way

According to the Tunisian artist, the integration of science in art can be a powerful tool for education and communication, especially in the face of emerging challenges such as climate change and technology. The artist, who has been working with science and technology for many years, expressed her belief in the power of art to make complex ideas accessible and engaging.

The artist's vision was to create a new way of visualizing science that could reach a wider audience and foster a deeper understanding of scientific concepts. She aimed to combine art and science to create a new form of communication that could bridge the gap between experts and the public.

The artist worked with a team of scientists and researchers to develop a series of visualizations that could be presented in a way that was both stunning and informative. The result was a series of works that combined abstract forms with scientific data, creating a new language for science.

The artist believes that this new approach to visualizing science can have a profound impact on how people think about and engage with scientific concepts. She hopes that her work will inspire others to see the world through a new lens, and to find new ways to communicate the wonders of science.

National Service Academy recruits take part in QCDC career advising programme

Qatar Cancer Developing Centre (QCDC) recently hosted the National Service Academy as part of its Cancer Advising System programme. The program aims to help identify potential students and provide career paths.

The programme involved communications material (QCDC and Qatar Public Health), Cancer Health Assessment and QUIPS Work (indicators - designed to help young people identify potential technologists and potential before receiving a list of potential career counsellors. Qatar Cancer Developing Centre Director, QCDC, said, “This co-operative is an important way of reinforcing the role of career advice in the region. The academy’s initiatives are going through a transition stage in their academic and professional lives. It is important to provide them with the means to make correct career decisions after graduation.”

The academy also organized a QPRC session to create awareness among the public about the importance of advising young people of the career opportunities available. Qatar Cancer Developing Centre Director, said, “The National Service Academy was a partner in this session to create awareness about the importance of advising young people about the new career opportunities available.”

Qatar Cancer Developing Centre is a non-profit organization aimed at advising young people about cancer. The centre is supported by Qatar National Cancer Centre and Qatar Cancer Developing Centre.

Qatar Scientific Club to host spring camp

Qatar Scientific Club has launched its spring camp, aiming to create awareness about the importance of health and sports. The activities will be conducted in two phases from December 24 to 18. The aim is to ensure a healthy lifestyle and encourage young people to practice through science, technology, engineering, and mathematics. The camp targets the age group from 14-14, which is further divided into two categories.

Al Rayyan Municipality inspection tours in November

As Al Rayyan Municipality carried out 2,635 inspection tours during November, which resulted in the execution of 64,442 cases, this amount is relatively high. The inspections were conducted to ensure that the city is clean and safe for its residents.

The inspections were carried out by a team of inspectors and engineers who were responsible for ensuring that the city met the required standards. The inspections were conducted in various areas of the city, including residential areas, commercial areas, and public spaces.

One-million tree planting initiative takes root

The Ministry of Municipality and Environment’s Public Affairs Department organized a tree planting event in cooperation with the Embassy of Singapore as part of a global initiative to plant one million trees. The event was led by Dr. Sultan bin Jassim Al Jassim, the Director of Public Affairs Department.

The event was attended by Dr. Sultan bin Jassim Al Jassim, the Director of Public Affairs Department, and other officials. The event was also attended by representatives from the Embassy of Singapore and local residents. The tree planting event was a part of a global initiative to plant one million trees.

Trump has ‘blind spot’ on Russia: Romney

WASHINGTON (AP) — President Trump has a “blind spot” on Russia that he can’t see, and that is why he fired former FBI Director James Comey last week, according to former Sen. Mitt Romney, a Republican who voted to convict and remove the ex-president from office.

Romney has a long history of criticism of Trump. He was the lone Republican to vote to convict and remove Trump from office during his first impeachment trial last year.

“Donald Trump has a blind spot on Russia that he can’t see,” Romney said during remarks to the National Prayer Breakfast in Washington. “That’s why he fired former FBI Director James Comey last week, a president who is unable to see the danger that Russia poses to our nation.”

Romney said he was not surprised by Trump’s decision to fire Comey, who had been investigating Russia’s role in the 2016 election. But he said Trump was “naive” in thinking that firing Comey would solve the problem.

“Donald Trump has a blind spot on Russia that he can’t see,” Romney said. “And that is why he fired former FBI Director James Comey last week, a president who is unable to see the danger that Russia poses to our nation.”

EU, UK tooreach local poll in 12 years

Bosnia’s Mostar holds first local poll in 12 years

C ultures in Bosnia’s ethnically divided town of Mostar were voting for their very first local elections in 12 years on Sunday. The town, which is the site of a casino, was once a symbol of the country’s divided past. Most voters in Mostar voted for the first time since 1991. In Mostar, more than 80% of the population is Muslim, while the Serb minority is largely separated by the city’s historic bridge. The bridge was once a symbol of the city’s multicultural past. Mostar is a town that was destroyed during the Bosnian War (1992-1995), which was fought primarily in the former Yugoslavia. The town’s population is divided into three ethnic groups: Serbs, Muslims, and Croats. The election is seen as a test of the country’s ability to overcome its troubled past.

Five million people will be watching in Eastern Europe as the EU holds its first elections in 12 years. The elections will be held in May 2019 and are the result of a failed attempt to hold an EU-wide election in 2009. The EU’s 28 member states are divided on whether to hold the elections and how they should be held.

Denmark to exhume millions of cull mink

Putin praises spy agency personnel

Two more arrests in Austria over anti-Semitism

German, Finland to repatriate women, children from Syria

C orruption and fraud at the European Union have led to a new push for EU-wide elections, which are scheduled to take place in May 2019. The European Parliament has voted to hold elections in May, but the details of the election are still being worked out.

Denmark is set to exhume millions of cull mink, which have been used to control the spread of animal diseases. The mink were euthanized due to a disease outbreak that affected the mink population in Denmark. The mink were found to be infected with the disease, which is spread through the fur.

President Vladimir Putin praised the work of the FSB, Russia’s main domestic spy agency, on Monday, saying the agency was doing a good job.

Two men were arrested in Austria on Monday after they were arrested in a hotel in Vienna. The men were arrested for alleged involvement in a terror plot.
Farmers warn of relay hunger strikes

Farmers threaten a series of protests against the central government's recent agricultural reforms at the Delhi-Uttar Pradesh border. This protest is likely to escalate the existing tension between farmers and the government.
Managing climate change is not a zero-sum game

By Praveen Nal Wali

E

cological pledged in September to phase out coal-based electricity by 2027. The idea was followed by a similar pledge from Japan a few weeks later. By 2050, the Chinese have set a goal to achieve carbon neutrality. China’s leading government in Beijing has been working to reduce its dependence on fossil fuels, and its carbon emissions from energy use have already peaked.

Carbon emissions peaked in 2013, according to the International Energy Agency, and have since been on a downward trend. The Chinese government has set a target of achieving carbon neutrality by 2060, and has also pledged to peak carbon emissions before 2030. This is a significant departure from previous decades, when China’s reliance on coal and other fossil fuels was increasing.

China is also facing pressure from other countries to reduce its carbon footprint. The United States, for example, has set a goal of reducing its greenhouse gas emissions by 2030. Canada has also pledged to reduce its carbon footprint to 2030.

China is not alone in its efforts to reduce its carbon footprint. Other countries, such as India, have also set targets to reduce their carbon emissions.

China’s pledge to peak carbon emissions before 2030 is a significant step forward, as it shows that the country is willing to take action to address climate change. However, it is still unclear how China will achieve this goal, particularly given the country’s reliance on coal and other fossil fuels.

In recent years, China has made significant progress in reducing its carbon footprint. The country has invested heavily in renewable energy, and has also implemented a range of policies to reduce its carbon emissions. However, there is still much work to be done.

China is facing significant challenges as it tries to reduce its carbon footprint. The country’s economy is heavily dependent on coal and other fossil fuels, and it is difficult to make the transition to a low-carbon economy. The government is also facing pressure from other countries to reduce its carbon footprint, and it will need to work with these countries to achieve its goal.

China’s pledge to peak carbon emissions before 2030 is a positive step forward. However, it is still unclear how the country will achieve this goal, and much work needs to be done.

China’s pledge to peak carbon emissions before 2030 is a positive step forward. However, it is still unclear how the country will achieve this goal, and much work needs to be done.

CPEC poses no threat to our interests, says British envoy

The Pakistan government has ordered all border crossings to be closed from midnight on Monday for two weeks, as the country struggles to contain a surge in Covid-19 cases. The closure comes after a number of cases were reported in the southern port city of Karachi, where authorities are implementing strict lockdown measures to curb the spread of the virus.

The decision to close the border crossings follows a meeting of the National Coordination Committee on Covid-19, which has been holding regular meetings to discuss measures to control the spread of the disease.

The government has also announced a nationwide lockdown on weekends, with all non-essential activities prohibited.

The closures are expected to have a significant impact on trade and tourism, as Pakistan is heavily reliant on cross-border trade and tourism for its economy.

The Pakistan government has been under pressure to take stronger measures to control the spread of the virus, as the country’s healthcare system is struggling to cope with the surge in cases.

The closures come as the World Health Organization (WHO) has declared the global pandemic to be over, and as many countries ease their lockdown measures.

However, Pakistan’s healthcare system is still struggling to cope with the number of cases, and the government has been urged to take further steps to control the spread of the virus.

The closures are expected to last for two weeks, after which they will be reviewed.

The Pakistan government has also announced that it will provide financial support to those affected by the closures, including those who depend on cross-border trade and tourism for their livelihood.

The closures are expected to cause disruptions to trade and tourism, but the government has said that it will work to minimize the impact on the economy.

The government has also announced that it will provide financial support to those affected by the closures, including those who depend on cross-border trade and tourism for their livelihood.

5/6 Park sports more space for activities

The Supervisory Committee of Beautification of Roads and Public Places (SRP) has announced that 5/6 Park, the first-ever park in Doha, will be expanded to accommodate more activities. This has been made possible through the implementation of a new design concept that maximizes the use of space while maintaining the park's natural beauty. The expansion will include additional green areas, playgrounds, and seating arrangements, all of which will enhance the park's aesthetic appeal.

Artists who helped to beautify park are honoured

The Supervisory Committee of Beautification of Roads and Public Places (SRP) has invited local artists to collaborate on a new project that aims to beautify 5/6 Park. The artists will be responsible for creating murals and sculptures that will add to the park's visual appeal.

PM reviews 5/6 Park progress

The Prime Minister and Minister of Interior, Sheikh Chalid bin Thani Al Thani, has visited 5/6 Park to review the progress of the project. He was impressed with the progress made and thanked the team for their hard work. The Prime Minister also expressed his belief that the park will become a popular destination for locals and tourists alike.
