Sultan Qaboos lived for peace; may he now rest in peace

Oman's Sultan Qaboos bin Said, one of the Middle East's longest-serving rulers who maintained the country's neutrality in a region divided between a US-led war on terrorism and a struggle between Sunnis and Shiites, died at the age of 79 on Sunday. Sultan Haitham bin Tariq, Qaboos's cousin and successor, was named as Sultan of Oman yesterday following the Sultan's death.

It is evident that Haitham bin Tariq, the successor of Sultan Qaboos, has promised to uphold Muscat's policy of peaceful coexistence with all nations while further developing Oman. "We will continue to assist in resolving disputes between countries in his neighborhood and the West with diplomacy and peaceful Oman, and He wished that Oman kept its neutrality in regional conflicts.

Sultan Qaboos, who had dominated decision-making for almost four decades, willed his political legacy for his people of which they would be proud of. He is rightly regarded as the most beautiful, and among the best ruling monarchs in the Arab world.

This smooth transition of power is a great gift. He willed his political legacy for his people of which they would be proud of. He is rightly regarded as the most beautiful, and among the best ruling monarchs in the Arab world.

Sultan Haitham bin Tariq, the successor of Sultan Qaboos

Born in 1945, Haitham, who studied at Omani universities, served as minister of culture and as foreign ministry undersecretary before he was appointed as Sultan of Oman in 1993.

A ruler who advocated the policy of peaceful coexistence and friendly relations with all nations, Sultan Qaboos unified his country during his 45 years of rule. He is rightly regarded as the most beautiful, and among the best ruling monarchs in the Arab world.

Sultan Qaboos, who has dominated decision-making for almost four decades, willed his political legacy for his people of which they would be proud of. He is rightly regarded as the most beautiful, and among the best ruling monarchs in the Arab world.

Sultan Qaboos lived in Muscat yesterday. The major challenges facing Oman are strait states and talk to the United States and other Gulf Arab states on ensuring the security of its neutrality in the Middle East. He was a keen sport enthusiast - he was the first president of Oman's Football Association (from 1983 and 1986), turned his hand to the diplomatic field in 1986, where he took the position of Undersecretary of the Ministry of Foreign Affairs for Political Affairs for six years (1986–1992).

The smooth transition of power following the Sultan's passing was a great surprise to the people of Oman and the world. Sultan Haitham bin Tariq is the son of Sultan Qaboos, who ruled for 45 years and is widely regarded as one of the greatest leaders of his time.

He is the first word I heard from my wrenching mother after news of the great Sultan Qaboos' death woe. The father of the people, the pride of the country, all of us, has died. "

"Indeed, to God we belong and to Him we shall return," the statement said. The late Sultan Qaboos in the capital Muscat yesterday.

The late Sultan Qaboos, in his will, passed down two names, in case the royal family disagreed on the succession. If the royal family could not agree, opting to follow his "wise" guidance, state media said.

The Turkish pavilion at the Doha International Book Fair (DIBF) is a symposium entitled "Turkish Culture between Historical Circumstances and Its Emergence" was held on Friday evening and was attended by a large crowd of QIFR visitors. It was also attended by the ambassador of Turkey to Qatar, Dr. Ibrahim Adhamoglu, Qatar Green Building Council (QGBC) Chair, Ahmed Al-Shamari, and Professor of Turkish Language and Literature at Qatar University Mustafa Fikret Ozer, Professor of History and Civilization at Qatar University Ibrahim Adhamoglu, and was attended by a large crowd of DIBF visitors.

Adhamoglu discussed the relationship between the Turkish language, noting the significance of the language to Arabic, the most important language in the region. He appreciated some Arab countries, which have translated 150 books on Arab culture to be translated into Turkish. He also talked about the importance of translation in transferring Turkish culture to Arabic. Adhamoglu discussed the relationship between Qatar and Turkey in the modern era and how they moved to advanced levels in culture and arts and in all fields.

For his part, Dr. Mustafa Aqil al-Khatib, and Professor of History and Civilization at Qatar University Mustafa Fikret Ozer, Professor of History and Civilization at Qatar University, discussed the relationship between Qatar and Turkey,-pay attention to translation. He also touched on the language learning. He pointed out that the Turkish Ministry of Culture has a list of 250 books on Arab culture to be translated into Turkish, of which 150 have been translated so far. He appreciated some Arab countries, which have translated 150 books on Arab culture to be translated into Turkish. He also talked about the importance of translation in transferring Turkish culture to Arabic.

The Turkish ambassador talked about the importance of cultural exchange between countries, which takes place thanks to translations and language learning. He pointed out that many Turkish intellectuals are keen to learn the Arabic language, writing the importance of translation in transferring Turkish culture to Arabic. He pointed out that the Turkish Ministry of Culture has a list of 250 books on Arab culture to be translated into Turkish, of which 150 have been translated so far. He appreciated some Arab countries, which have translated 150 books on Arab culture to be translated into Turkish. He also talked about the importance of translation in transferring Turkish culture to Arabic.

The event was also attended by the ambassador of Turkey to Qatar, Dr. Ibrahim Adhamoglu, Qatar Green Building Council (QGBC) Chair, Ahmed Al-Shamari, and Professor of Turkish Language and Literature at Qatar University Mustafa Fikret Ozer, Professor of History and Civilization at Qatar University. The event was attended by a large crowd of DIBF visitors. It was also attended by the ambassador of Turkey to Qatar, Dr. Ibrahim Adhamoglu, Qatar Green Building Council (QGBC) Chair, Ahmed Al-Shamari, and Professor of Turkish Language and Literature at Qatar University Mustafa Fikret Ozer, Professor of History and Civilization at Qatar University. The event was attended by a large crowd of DIBF visitors. It was also attended by the ambassador of Turkey to Qatar, Dr. Ibrahim Adhamoglu, Qatar Green Building Council (QGBC) Chair, Ahmed Al-Shamari, and Professor of Turkish Language and Literature at Qatar University Mustafa Fikret Ozer, Professor of History and Civilization at Qatar University. Kahramaa ‘sets record’ in reducing power loss

According to a statement by Kahramaa, the index of power loss in the electrical transmission network was recorded at 1.796 minutes. The new figure is a record and the best rate achieved, it stressed. The indicator is calculated by dividing the lost power and its duration by the maximum load. When it comes to the electrical distribution network, the indicator witnessed a distinguished performance where the average time of the cut-off from the subscriber stood at 0.1894 times per subscriber. The target in 2019 was fixed at 0.1544 times per subscriber. The indicator is calculated by dividing the total number of subscribers affected by interruptions during the year by the total number of subscribers.

“The technical performance index (the performance level of the electrical network) in 2019 witnessed a great improvement and reached unprecedented levels in the history of the electric system in Qatar’s transmission and distribution networks. Kahramaa succeeded in managing the power loss, as well as interruptions, in line with the current and meeting all the needs of the country round the clock,” the statement noted.

Kahramaa measures the performance of the system using distribution and transmission networks according to indicators to ensure the reliability and reliability of the network. The performance indices of the average interrupted minutes and the ratio of the electrical network also witnessed a remarkable improvement in 2019. It recorded an average of 15.665 minutes per subscriber. The target in 2019, according to global indicators, was 45.5 minutes. This indicator measures the speed of Kahramaa’s response to interruptions and is calculated by dividing the total minutes of interruptions in the whole network during the year by the number of interruptions.

“Kahramaa is proud to achieve unprecedented performance levels in the electrical distribution network also witnessed a remarkable improvement in 2019. It reached an average of 4.35 minutes per subscriber. The target rate in 2019, according to global indicators, was 0.1785 minutes. This indicator measures the speed of Kahramaa’s response to interruptions and is calculated by dividing the total number of minutes of interruptions by the total number of subscribers.

“Kahramaa has also witnessed a significant improvement in response to faults through repairing works and rapid fault detection, timely and distribution network maintenance along with monitoring and updating specifications to anticipate any emergency or potential to enrich their investigations. Kahramaa’s response to faults through repairing works and rapid fault detection, timely and distribution network maintenance along with monitoring and updating specifications to anticipate any emergency or potential damage during drilling also resulted in the achievement.

Qatar Biobank research enables over 190 projects

Research by Qatar Biobank, a member of Qatar Foundation (QF), has so far enabled 190 research projects, with the participation of hundreds of researchers from more than 100 institutions, one of them Qatar’s healthcare sector. Qatar University leads on the research front, having undertaken 52 projects, followed by Sidra Medicine with 35, Weill Cornell Medicine with 29, and Hamad Medical Corporation with 22 research projects. The study’s lead author, Dr. Asmaa Al-Thani, chairperson of Qatar Biobank’s Research Program Committee, and board vice-chairperson, said: “We are proud of our achievements so far and we have effectively empowered Qatar’s medical research ecosystem through our sustained partnership scheme with leading healthcare institutions in the country and providing qualified researchers with the right data to enrich their investigations.” Homegrown researchers in the field of biobanking and medical research are working with Qatar Biobank to further enhance the quality of their investigations. "The success of Qatar Biobank is dependent on the participation of the local population, which has already reached over 25,000 participants is a clear indication of the importance our people place on their health now and in the future," said Dr. Asmaa Al-Thani, chairperson, Qatar Biobank.

Qatar Biobank’s research over recent years has revealed fascinating insights into the health of the Qatari population. The Qatar Health and Cohort Study 2018-2022, coming into effect on 1st April 2020, was designed to bridge this gap by supporting a national research strategy to collect and analyse data and information on health-related risks to enrich our research output. As a member of the Qatar National Healthcare Strategy 2018-2022, Qatar Biobank is playing a significant role in the development of local research, medical research, and patient care. Qatar Biobank’s research over recent years has researched on the importance of participating in the program, which more than 25,000 Qataris have already chosen to be part of. The success of Qatar Biobank is dependent on the participation of the local population, which has already reached over 25,000 participants, one of them Qatar’s healthcare sector. Qatar University leads on the research front, having undertaken 52 projects, followed by Sidra Medicine with 35, Weill Cornell Medicine with 29, and Hamad Medical Corporation with 22 research projects. T he potential for engineering and medical education to be inte-
grated to drive innovation and improve outcomes was dis-
cribed by Dr Javaid I Sheikh, dean of the WCM-Q College of En-
GINEERING, as he gave the keynote speech at the Qatar-
WCM-Q Grand Rounds lecture series. 

Dr Sheikh outlined the benefits of integrated education and re-
search for driving innovation and transforming healthcare for the
planet and to make a huge dif-
ference in the well-being of all
through the convergence of engineering and medicine.

"This is why, rather than
just sharing our expertise,
we are purposefully educat-
ing physician-engineers – or 'physicianeers' – and pur-
posefully trains them to invent augmented or mixed reality computer technology to allow a surgeon to "see" the site of a patient's disease and make ac-
sions without touching the body,
" says Dr Pettigrew, director of the new EnMed programme
at T exas A&M University.

"This is why, rather than
just sharing our expertise,
we are purposefully educat-
ing physician-engineers – or 'physicianeers' – and pur-
posefully trains them to invent augmented or mixed reality computer technology to allow a surgeon to "see" the site of a patient's disease and make ac-
sions without touching the body,
" says Dr Pettigrew, director of the new EnMed programme
at T exas A&M University.

Sidra Medicine physician
highlights complexity of paediatric emergencies

Sidra Medicine has partnered with Jumia Media at Cor-
ners to present Paediatric Emergency and other well-
based Webinars, to host the Qatar-Paediatric Emergency Medicine (Q-PEM) conference, the fourth edition of which concludes
today.

"Unlike adult emergencies, children’s emergency care services are often more complex, and need an approach which involves a multi-disciplinary and multi-specialised team that addresses the needs of the patient and their family," said
Professor Omar Bennani, chair of the Department of Emergency Medicine at Sidra Medicine.

"Conference topics range from sensory-friendly emer-
gency environments, customer service in the emergency de-
artment, and food allergies in 2020, to anti-epileptic drugs,
infections, fractures, wounds that required suturing and burns were
treated in another emergency facility. "The Q-PEM conference
in Qatar-Paediatric Emergency Medicine, which has been a success for barely 20 years, Sidra Medicine has been able to off er Qa-
Aled healthcare through invention.

"This is why, rather than
just sharing our expertise,
we are purposefully educat-
ing physician-engineers – or 'physicianeers' – and pur-
posefully trains them to invent augmented or mixed reality computer technology to allow a surgeon to "see" the site of a patient's disease and make ac-

TENDER FOR SALE OF REFRIGERATOR TRUCKS WITH HYDRAULIC LIFT

Tenders are called for sale of two refrigeration trucks:

Hyundai 2014 HD72
Hyundai 2014 HD55

Tender collection:
Tender documents are available for collection from 08:00 to 15:00 hours from the date of this advertisement till 19th Jan, 2020, closing date of bid submission 23rd Jan 2020 at 15:00 hours, any bids after this date and time will not be accepted.

Collection and submission address:
Qatar National Convention Center, Administrative Office, Level 2, Al Durrani Ringway, Education City.

Tender fee:
QAR 100 can be paid by cash or card to NCNC accounts department, tender fee is non-refundable.

Qatar Charity participates in the 30th Doha International Book Fair

Qatar Charity’s (QC) pavilion at the 30th Doha International Book Fair, inaugurated by the Minister of Culture and Sports H E Salah bin Ghanem Al Ali, is drawing a great turnout of visitors of all ages and different nationalities.

Qatar Charity's participation in the book fair, held at the Doha Exhibition and Convention Center (DECC) under the slogan ‘Do You Then Not Ponder’, comes as part of its responsibility towards promoting the culture of volunteering and instilling the values of humanitarian action to contribute to the cultural development of society in accordance with the Qatar National Vision 2030.

Emphasizing the importance of Qatar Charity’s participation in the book fair that encourages society to read, Mr. Jassim Mohammed Al-Emadi, Director of the Local Development Department said, “Qatar Charity’s pavilion has brought many publications and AR technology that promote the culture of humanitarian action, reading, and local cultural development.”

“Qatar Charity’s takes part in the book fair as part of its strategy to contribute to the local cultural development, and deliver humanitarian message to visitors, exhibiting its publications and using AR technology that shows them humanitarian action on the ground,” said Mr. Ahmed Saleh Al-

Children’s Corner

Qatar Charity’s pavilion at the book fair has a section for publications and a children’s corner where many activities and competitions are held for children and students visiting the fair. Qatar Charity also intends to organize workshops, symposiums, and book-signing events at the book fair.

The Children’s Corner of the pavilion at the book fair is witnessing a wide presence and active participation, as more than 200 children have already participated in various events during the first two days of the fair.

Various Publications

The publications section includes more than 10 publications in both Arabic and English languages for adults and children and adults, most notably “Volunteers at the Heart of the Field”, a 40 Hadiths collection on making charity, and a book for zakat calculation. The booth has also many other books for children, stories of “Future’s Writer” program, and the 21th issue of the Ghiras magazine released in conjunction with the book fair, in addition to providing visitors an opportunity to relive the experience of humanitarian action through augmented reality (AR) technology.

Qatar Charity urges people to pay frequent visits to its stand near the gate No. 2 at the Doha Exhibition and Convention Centre (DECC) during the period from January 9 to 18, 2020 to learn about its latest publications and engage in its new and different activities designed for children and others.

Visitors’ Views

Many visitors were delighted at visiting Qatar Charity’s pavilion at the book fair expressing their view that Qatar Charity has succeeded in delivering its noble humanitarian message to the society by building communication channels and participating in such events.

"Qatar Charity has provided us with an opportunity to relive the experience of giving and humanitarian actions through the technology of augmented reality," said Waleed Omar, one of the visitors.

"I saw refugees’ homes through this technology that helps me feel the actual suffering of the displaced and needy," added Omar, noting that now she has a desire to help those in need as much as possible.

For his part, a fifth grader at Al-Nojoum School Mohammed Atif Awadah said, “I played the maze game at Qatar Charity’s pavilion and knew the need of a child feeling very cold for heating, as we are in winter.”

Book-Signing Event

Besides, a book-signing event will be held for the 17 winning stories in the third edition of “Future’s Writer” in addition to launching many other books.

Regime air strikes kill 8 civilians in Idlib province

A ceasefire announced in late December 2019 to allow humanitarian aid into the area of Idlib, which is run by Hayat Tahrir al-Sham, has repeatedly vowed to retake the region after the bombardment of the region after the ceasefire started. According to the Observatory, the area of Al-Nerab, killing four. The attack was launched in a normal flight corridor and in a technical operation with a high level of precision.
President Donald Trump in the November election has shown a strong determination to make the policy changes that are necessary. This comes as a response to the concerns of the American people, particularly in the areas of healthcare, immigration, and economic growth. The November election has been characterized by a high level of voter participation, with many people casting their ballots in favor of various candidates.

The election results have been analyzed, and it appears that the Democratic Party has made significant gains in several key states, including Pennsylvania, Michigan, and Wisconsin. This suggests that the political landscape in the United States is changing, with a greater emphasis on issues such as healthcare, education, and infrastructure.

The outcome of the election will undoubtedly have a significant impact on the country's future, and it is likely that we will see more debates and discussions on these important issues in the coming months. The November election has been characterized by a high level of voter participation, with many people casting their ballots in favor of various candidates.
Taiwan president wins second term

Against all odds, Tsai Ing-wen has won re-election in a landmark vote, securing a second term as president of Taiwan despite a ramped-up pro-China campaign in the run-up to the polls.

"I accept the people's decision," Tsai said in her victory speech on Friday. "I obey the outcome of the election." Tsai is the first democratically elected president in Taiwan's history and the first woman to hold the office. Her primary rival, Han Kuo-yu of the China-friendly Kuomintang (KMT) party, conceded defeat shortly beforehand.

"We are deeply touched by the trust the people have placed in us," Tsai said. "We respect and accept the people's decision."

Tsai's win is a major blow to China, which has long sought to reunify Taiwan with the mainland. Beijing has signaled that it would use military force if necessary to bring Taiwan under its control.

But Tsai's victory sends a clear signal that Taiwan is not going anywhere, and that the island's electorate will not tolerate any attempts to bring it under the control of the People's Republic of China.

"Taiwan is an inseparable part of China," said Wang Yu-chi, the head of the Department of Health Protection at the Taiwan Department of Health. "We will continue to develop," said Wong Ka-hing, director of the department.

The win is also a victory for the pro-independence forces in Taiwan, who have been campaigning for the island's full independence from China.

"This is a great day for democracy," said Lin Yu-chun, a member of the pro-independence Democratic Progressive Party (DPP). "We have won the battle of ideas, and we will continue to fight for our future."
Extinction Rebellion could sue police over extremist ideology listing

By Verena Dobnik
Gloucestershire Echo

Extinction Rebellion is demanding legal action against counter-terrorism police after it was revealed that the group’s website was added to a list of extremist content.

The environmental group is calling on the government to move against the listing, which it says is “utterly inappropriate.”

Police have been asked to consider making a referral to the Charity Commission, which oversees charitable organisations.

The group has previously argued against the proposal, saying it is “a startling example of how Prevent is being used to attack political dissent.”

Later in the day, the group said it would consider taking legal action against the government if the listing continues.

“Extinction Rebellion is a non-violent movement,” the group said.

“Political activists’ websites should never be listed as terrorism propaganda.”

The group has launched a legal challenge against the listing, which it says is inconsistent with its values.

The group said: “We stand up for the climate, which is under threat from climate change, and for the environment, which is facing extinction.

“We are committed to non-violence and to peaceful protest and direct action, which we believe is the most effective way to bring about change.”

The group has previously won a court case over its right to protest in London.

Scottish Labour turns down leader’s federal UK strategy

By Laura Cawley
Scotland on Sunday

Scottish Labour has rejected its leader’s proposal for a new federal UK strategy.

The party leader, Anas Sarwar, had argued for a multi-option approach to devolution, saying: “The current system is broken and needs to be urgently reversed.”

But the party’s federal council, which includes representatives from all regions of the UK, has unanimously rejected the proposal.

The council said: “The current system is broken and needs to be urgently reversed.”

Sarwar had argued that a new federal system would address concerns about the current system, which he described as “unfair and unequal.”

But the council said: “We cannot accept this and will not be a vehicle for such policies.”

The council has called for a referendum on Scottish independence, which it described as “essential.”

But Sarwar has said he would only support such a referendum in the event of a second Scottish independence referendum.

The council also rejected a proposal for a new federal system, saying: “We cannot accept this and will not be a vehicle for such policies.”

French govt makes age limit concession on pension reform

**-written by Andrea Tommasi

Paris – France’s government on Tuesday proposed lowering the retirement age for senior civil servants, a key concession to serve as a pillar of its long-awaited pension reform package, after weeks of rolling strikes and street protests.

The package would lower the general retirement age from 62 to 60 for most workers, while raising it to 65 for judges and civil servants, and introducing a tiered system for younger workers who would have to accumulate a certain number of points to qualify for their full pension.

The government was under pressure to move on the civil servant retirement age concession, which it had long opposed for its costs. But with a key strike due to begin on Wednesday, the government conceded it could only make this move by lowering the age limit for judges.

The new law is expected to be approved by the National Assembly next week. It will then go to the Senate, which is widely expected to approve it.

The government's decision comes amid widespread anger over the pension reform, which has sparked the biggest protests in France for decades. The strikes have disrupted public transport, schools and hospitals, and have caused widespread disruptions to daily life.

The government's concession was a key demand of the civil service unions, which have been among the most vocal opponents of the reform.

The reform, which is part of a broader economic package aimed at cutting the state budget deficit, has been met with widespread resistance in France, where the government has been under pressure to reduce public spending and improve competitiveness.

The government has already faced severe challenges in recent months, including a wave of strikes and protests over its plans to cut public spending, increase taxes, and reform the pension system.

The government's concession on the civil servant age limit is seen as a major victory for the unions, which have been among the most vocal critics of the reform.

The government has said it is committed to implementing the reform, but has also acknowledged that it needs to address the concerns of the civil service unions.

The reform is expected to go down well with the public, who are already fed up with the strikes and protests.

Police identify WhatsApp group involved in JNU attack

Police have identified a WhatsApp group named “JNUSU 2019” as being responsible for a recent incident at the JNU campus in New Delhi. According to the police, the group had been planning the attack and had coordinated with local officials.

The police identified the group involved in the attack on January 4, during which students were seen carrying sticks and other weapons. The group had been planning the attack for several days, and the police had released a list of names of those involved.

The police said that the group had been planning the attack for a long time and had been recruiting members from different parts of the country.

The police said that the attack was planned by a group of students who were known for their radical politics. The group had been planning the attack for several days and had been using WhatsApp to coordinate their activities.

The police had received information about the group’s plans and had been monitoring their activities. They had been keeping a close watch on the group and had been planning to arrest the members.

The police said that they had identified the group and were in the process of taking legal action. They said that they would be charging the members with crimes under relevant sections of the law.

Pakistan scientist honoured with top China award

Pakistan scientists have been recognized with a top China award, highlighting the importance of scientific collaboration between the two nations. The award is a testament to the contributions made by Pakistani researchers in various fields, showcasing the country's expertise and potential in scientific research.

100% basic pay rise for govt officials proposed

The Pakistani government has proposed a 100% basic pay rise for government officials, aiming to improve salaries and living standards for public servants. This measure is expected to boost morale and attract more talent into the civil service, contributing to the overall development of the country.

Glacier melt threatens Pakistan's future

The melting of glaciers, particularly in the Karakoram range, is posing a significant threat to Pakistan's water resources. The impact of climate change on glaciers is leading to increased flooding and water shortages, highlighting the need for adaptation and mitigation strategies to ensure sustainable water management.

Shocker over event at Unesco site

A shocking incident took place at a Unesco site in Pakistan, raising concerns about the safety and preservation of cultural heritage. The incident highlights the importance of strict security measures and the need for continuous monitoring to protect these precious sites.

Interviews

The secretary of the Higher Education, Science and Technology Commission – Pakistan, has emphasized the importance of collaboration and the role of international partnerships in advancing scientific research. The commission has been working to foster a vibrant ecosystem for innovation and excellence in Pakistan's scientific community.
Embracing a greener future will unlock new business opportunities

Devastating fires across Australia and California, persistent drought elsewhere in the Americas, record flooding in South Asia, and unprecedented storms all point to one thing, in Greenwich...

Climate change and its effects are accelerating, with climate-related disasters piling up, season after season. Some are familiar and growing worse, such as hurricanes and wildfires; others are new, such as heatwaves hitting cities at risk of flooding or worse. Glaciers are melting at a pace many researchers had not expected only five years ago. The amount of Arctic sea ice has declined so rapidly that the region may see ice-free summers by the 2030s, according to Pew Research.

Even the ground is fast warming. Permanently frozen ground, or permafrost, is thawing more rapidly, threatening the release of large amounts of long-stored carbon that could in turn make warming even worse, in what scientists call a climate feedback loop. For instance, thawing permafrost is releasing greenhouse gases into the atmosphere, helping to fuel warming. In Northern Alaska alone, the amount of thawed permafrost has increased by 70 percent since 2000.

Wealth alone will not shield economies from the impact of climate change

According to the International Monetary Fund, one in five people live in countries that are most vulnerable to economic loss caused by global warming.

Tackling climate change and establishing net-zero emissions is no longer a debate but a necessity. That’s why at Davos this month, the World Economic Forum set to address how businesses and governments can make this a reality and educate the wider community on the benefits that can be realised.

WEF says it believes we need new markets and prospects for businesses globally, high-skilled jobs in dynamic new industries for the workforce, and clearer, stronger global governance.

A recent study by the European Investment Bank (EIB) revealed that net-zero emissions strategies cost three times less than the cost of adaptation, helping to transform economies from urban to rural to sea.

One of the most difficult challenges of the 21st century is to reverse the climate change that has already happened. But it’s not too late to take action and prevent further damage.

Understanding the violent extremist mindset

Violent extremist groups are a global threat, and understanding their mindset is key to dismantling their activities and preventing further violence.

The theory asserts that the need for dominance, the need to dominate others and be dominant over others, is a key motivator for violent and extremist actions. This need can be driven by a combination of factors, including a lack of opportunities, social isolation, or feelings of being marginalized.

Violent extremist groups often target those who feel marginalized or excluded from society, and they use this to their advantage. By tapping into these feelings, they can recruits fighters and sympathizers who are more likely to join.

Nonviolent protests often go unnoticed, but they can turn violent when the media coverage is intense by violent extremist groups.

The theory offers a general blueprint for understanding the violent extremist mindset and the factors that influence their behavior. It provides insights into how to prevent and counter violent extremism, and it highlights the importance of addressing the root causes of extremism and violence.
Three takeaways from Trump’s first 2020 rally

By Lisa Rapaport

AFP

The commander in chief did not shy away from discussing and defending his decision to kill Qassem Soleimani, who he echoed Trump by saying additional new attacks and he was looking very seriously at our embassies — and not just in Baghdad, he said.
