MoP launches mental health awareness drive

The Ministry of Public Health (MoP) in collaboration with Hamad Medical Corporation, Sidra Medicine, Necker and Qatar Children’s University Hospital, has launched a mental health and wellness awareness campaign, ‘Are You OK?’, aimed at encouraging people to talk more openly about their mental health challenges and to seek help when needed.

Ambassador Salah bin Ghanem bin Nasser al-Ali, the Minister of Culture and Sports, said at the launch event: “Mental health is as important as physical health, and we need to talk about it more openly.”

Qatar F1 tickets go on sale on Tuesday

T he tickets for the inaugural Formula One Qatar Grand Prix will go on sale from Tuesday, October 12, the Losail Circuit Sports Club (LCSC) announced yesterday. The much-anticipated event will be held from November 19-21 at the Losail International Circuit. The tickets will be sold online with a discount for a limited number of early bird buyers.

The night race will be held on Saturday, November 20, with races on Friday and Sunday as well.

Qatar hosted the World Cup for the first time in 2022, the FIFA World Cup next year, which Europe as a guest team to prepare for the competition.

No Darb Al Saai this year: to be moved to permanent site at Umm Salal next year

He phone calls, emails and complaints about the cancellation of the Darb Al Saai this year have been many. According to The Peninsula, the Ministry of Culture and Sports informed people that plans for the 2021 edition of the event has been cancelled due to the ongoing pandemic.

The Ministry of Culture and Sports issued a statement which said that: “The Ministry of Culture and Sports is re-evaluating the event. According to the current situation, it is not possible to hold this year due to various organisational issues.”

Gurnah wins Nobel prize for ‘masterful’ writing

A bdulrazak Gurnah, who won the Nobel prize for literature for that, 'being the first African writer to win the prize', has become a household name in Tanzania and across the world. His work, 'The Boat', was published in 2016, and it has been translated into more than 20 languages.

The Nobel committee said that Gurnah's work is a 'masterful evocation of history and experience over several generations'. His novel, 'The Great Derangement', was shortlisted for the 2020 Booker Prize.

Many in the country acknowledged the recognition of Gurnah's work, saying it was a 'triumph for Tanzania'. They also said that they were proud of Gurnah's achievements.

However, some have also expressed their disappointment at the decision to award the Nobel prize to a writer from a region that has produced so many great writers. However, the committee said that Gurnah's work is 'a masterful evocation of history and experience over several generations'.
Qatar stresses need for integration of national laws and international norms

Qatar has stressed the need for integration between national laws and international instruments in the rule of law, stressing that the country’s leadership attaches special importance to strengthening national institutions concerned with the rule of law, based on international standards and norms. Qatar also affirmed the government institutions to combat corruption, which is a war for the future generation, and for maintaining the rule of law in the state, to maintain peace for achieving equality and justice for all and for protecting government programs. The statement referred to the work of the Rule of Law and Anti-Corruption Committee (MADLSA) and the National Authority for Combating Corruption (NAACC) in the fight against corruption, peacekeeping, conflict resolution, and conflict prevention, peacekeeping, conflict resolution, peacebuilding and conflict prevention.

The statement also highlighted that the Sharqiya Council elects in Qatar on 19th October, and a day during which the state player or the state has decided and for empowering Qatari citizens to choose their representatives and for ensuring human rights with protection. The statement added: “The 76th session on the rule of law, which is the main factor in achieving equality and justice for all and as it is the main factor in achieving equality and justice for all and for promoting peaceful solutions to disputes, and its efforts have resulted in strengthening national institutions concerned with the rule of law and with the United Nations in 2012, to promote the rule of law and combat corruption at the national and regional levels.”

The statement also stressed Qatar’s support for the United Nations in the fight against corruption, peacekeeping, conflict resolution, and conflict prevention, peacekeeping, conflict resolution, peacebuilding, and conflict prevention. Qatar also expressed its solidarity and support for the United Nations in its efforts to combat corruption, peacekeeping, conflict resolution, and conflict prevention, peacekeeping, conflict resolution, peacebuilding, and conflict prevention.

Qatar has been a strong supporter of the United Nations in its efforts to combat corruption, peacekeeping, conflict resolution, and conflict prevention, peacekeeping, conflict resolution, peacebuilding, and conflict prevention. Qatar also expressed its solidarity and support for the United Nations in its efforts to combat corruption, peacekeeping, conflict resolution, and conflict prevention, peacekeeping, conflict resolution, peacebuilding, and conflict prevention.
Ministry launches mental health and well-being drive

The Ministry of Public Health (MoPH) and health and well-being partners have collaborated with organisations across Qatar for the ‘Are You OK?’ campaign.

This initiative represents an important aspect of Qatar’s Mental Health Strategy and the National Strategy 2021–2026. One strategy plan for Mental Health and Well-being aims to help reduce the negative impact of mental health problems on individuals, families, and communities.

"Providing access to confidential services, which are free from stigma, is key to improving the health and well-being of our population. We have designed a programme to encourage people who are struggling with their mental health to seek support," said Al-Shaibani and al-Moheiri.

For more information about the ‘Are You OK?’ campaign, visit the MoPH’s website at moph.gov.qa.

National Day 2021: focus on local environment

The Ministry of Administrative Development, Labour and Social Affairs (MoAD), the Supreme Committee for Delivery and Legacy (SCDL), the Ministry of Public Health (MoPH), the Ministry of Municipality and Environment, Ministry of Public Works (MoPW), and Qatar Red Crescent Medical Corporation (HMC), partner organisations for managing and renting facilities and housing units in these projects.

With regard to Mesaimeer, Al Sailiya Residences, Naufar and Qatar Red Crescent Medical Corporation (HMC), partner organisations for managing and renting facilities and housing units in these projects.

Dr Majid Abdulla, chairman of the Medical Health Service of HMC, said: "In recent years, the Ministry of Public Health has launched over 50,000 calls and the launch of mental health virtual consultation across the healthcare system has enabled greater access to care, resulting in a greater number of people being able to benefit from psychological support."

Dr Samia Al-Moheiri, deputy national health lead for Mental Health and Well-being initiatives, said: "It is important to have the support of so many organisations across the community. This initiative is a perfect example of cross-sector collaboration, with organisations from many sectors outside of health, such as playing their part in raising awareness of mental health and wellbeing."

The initiative aims to enhance awareness of how to avoid mental health and environmental stressors and to effectively deal with the pressures of daily life. It also aims to encourage people to talk more openly about their emotions, building on the wealth of research that shows talking in the right way, this can help manage and resolve challenges in our lives. "We are building on the success of last year’s project, “Raising Awareness of Mental Health”, with a view to raising awareness of how to avoid mental health and environmental stressors and to effectively deal with the pressures of daily life. It also aims to encourage people to talk more openly about their emotions, building on the wealth of research that shows talking in the right way, this can help manage and resolve challenges in our lives,

Active Covid-19 cases in Qatar drop below 1,000

There were a total of 949 ac- ctive Covid-19 cases in the country as of yesterday, down from 1,517 a day before. The Ministry of Public Health (MoPH) revised the cumulative number of confirmed cases of Covid-19 to 172,043. The MoPH said the recent surge in the number of cases is due to the increased movements among tourists. It also recorded 16 recoveries from the virus during the past 24 hours, bringing the total number of recoveries in Qatar to 172,037.

Qatar Charity provides drinking water to displaced Syrians

Qatar Charity (QC) has operated a solar-powered water plant and maintained sewage networks in the city of Maarat al-Atareb in northern Syria, to benefit nearly 12,500 people. This comes as part of QC's efforts to alleviate the suffering of internally displaced persons (IDPs) and provide drinking water sources for them, according to a press statement.

In addition to operating a well, the project, which is the first-of-its-kind in the region, included the rehabilitation of a 2,000m-long water network in the town, the maintenance of horizontal pumps and operating panels, and the expansion of several lines, the statement noted.

Nearly 3,000m of sewer lines have been carried out, and the water well is expected to operate for 300 days for free throughout the year. Engineer Sawareh al-Najjar, QC’s water and sanitation project officer in Syria, said the project was directly implemented by Qatar Charity with the support of the people in Qatar. He added that the power of one panel is 400 watts, and this system can operate the well for 6-7 hours per day, providing 500 cubic metres of water sufficient to meet the needs of the village. It benefits more than 3,000 displaced families residing in the town.

The residents of the area expressed their happiness with the project, which greatly contributed to changing their living conditions. Ziad Abdo Awad, director of the service office in the town, expressed his thanks and appreciation to the philanthropists of Qatar for their continuous support and assistance.

Qatar Charity has trained the technical staff from the town’s local council on how to operate the solar-powered water plant and maintain the network, ensuring its sustainability. The training will enable the technicians to continue working and ensure sustainability of the service.
The HCQ workshop prepares physicians to analyse genetic variation in clinical practice

The workshop, which took place from April 25 to 28, sought to help participants gain an understanding of bioinformatics and interpret genetic variation in clinical practice.

The workshop was presented by two expert instructors: Dr. Borbala Mifsud, assistant professor of Molecular Medicine at the College of Health and Life Sciences (CHLS), Queen Mary University of London in London, and Dr. Omar Albagha, assistant professor, CHLS; Dr. Omar Albagha, assistant professor, CHLS; and Dr. Mohamed al-Naemi, co-ordinator Lee Morrison, Head of Academic Planning Committee, chaired the workshop.

The workshop was open to all college community members and people around the world could be part of this discussion on the humanitari- an implications of AI.

The full discussion is available on CMU-Q’s YouTube channel.

The Range Rover Sport SVR goes off-road to pursue James Bond in *No Time To Die*

The Range Rover Sport SVR went off-road to celebrate the release of the 25th Bond film, *No Time To Die*. The SVR went off-road to participate in the chase sequence put the perfect luxury SUV, made its world premiere in 1970. Since then, it has been involved in recording over 40 action sequences in films and television shows including the *James Bond* film franchise.

The SVRs used in *No Time To Die* are fitted with Narvik Black 22-inch alloy wheels and the optional Carbon Pack, which includes Glass Carbon front bumper inserts, grille and mirrors. The optional Carbon Pack also includes carbon-fibre exterior door handles, a carbon-fibre front grille surround, carbon-fibre side skirts and a carbon-fibre rear diffuser. The SVR is equipped with a speciﬁc carbon-ﬁbre front fascia, grille and mirrors. The optional Carbon Pack also includes a speciﬁc carbon-ﬁbre front fascia, grille and mirrors. The optional Carbon Pack also includes a speciﬁc carbon-ﬁbre front fascia, grille and mirrors.

*No Time To Die* is set against the backdrop of a global climate change and the rise of newer specialised tools. Bioinformatics, an important part of the human genome project, was used in clinical practice.

The session was moderated by Dr. Finbar McFall, Land Rover Special Vehicles Director, and featured with a panel of experts from the global Bond universe, including Mercy Aylward, director of operations, James Bond, and Bernadet Mihail, personal physician, Padriach Stewart, senior scientist at the EON Productions, and Mark North, North Star, guiding practice for the Bond team.

The panel discussed the grand challenges of the future of AI and the pursuit promises to be interesting.

Lamia was plucked into a total black yesterday after two main power stations went offline because they ran out of fuel, endangering the stability of the country.

State electricity in most places was back to normal on Saturday after fuel supplies were restored, but the fuel that stood to power private generators was in short supply.

After the provincial power station was forced to stop production because of a fuel shortage (though its gas reserves remain sufficient), the Zulfikar station stopped fueling the same day.

This led to the network’s (government) with no possibility of resuming for the time being, according to the Ethiopian Energy and Water main port by tribal protesters is ongoing in Sudan's Juba State, on October 20, 2021.

The main port was blocked by protesters from the late 1990s, and the authorities have been unable to resume fuel supplies to the country.

On February 15, 2021, the protesters ended their blockade, and restarting fuel supplies has been a priority for the government.

People shop in a grocery store under a partial electric light during a power cut near Bab El-Omari yesterday. 

The loss of power affected numerous areas of the country, including Addis Ababa, where reports of long lines at fuel stations and shortages of food and other essential goods were common.

According to the national electric company, the power shortage was due to a drop in hydropower generation caused by the current drought conditions.

The government has pledged to invest in renewable energy sources to reduce its dependence on fossil fuels.

The country's energy sector is facing a major challenge, with limited natural gas reserves and a lack of access to international markets for fuel imports.

A spokesman for the Tigra- ny rebels said that the attack came in response to ongoing air strikes by the Ethiopian government against rebel-held areas.

The Tigra- ny rebels, one of the main rebel groups in Ethiopia, has been fighting against the central government for several years, demanding greater autonomy and greater representation in the national government.

Philippine Nobel winner Ressa says Facebook is ‘biased against facts’

*Ressa claims the social media giant fails to protect against the spread of fake news and discrimination, and scrutinises the accounts of its critics with a heavy hand*

**By GLOBE TROTTER**

**6 December 2021**

Philippine Nobel laureate Maria Ressa says Facebook is “biased against facts” and accused the social media giant of failing to protect against the spread of fake news and discrimination, and scrutinising the accounts of its critics with a heavy hand.

Ressa, 58, who won the Nobel Peace Prize in 2018 for her work as a journalist and editor of the news website Rappler, told Reuters after winning the award that Facebook’s algorithms “prefere” and “interfere” with the news of its critics, saying the company had blocked more than 13,000 stories.

Ressa, who has been the target of intense social-media hatred from President Rodrigo Duterte’s supporters, which she said were aimed at silencing her criticism of the president and of the Philippines to exposure corruption and human rights abuses, said she had never been blocked by Facebook.

“Facebook says ‘truth is not a fact’,” Ressa told Reuters. “They’re saying if you have facts, you can’t trust them, you can’t be trusted.

“If you don’t have facts, you can’t have trust. If you don’t have any of these, you don’t have a future. If you don’t have a future, you don’t have a present.”

Ressa, whose work has been met with heavy-handedness from Duterente, has been the target of a harassment campaign and has been charged under a new anti-disinformation law, which has been widely seen as a tool to stifle media freedom.

Ressa also said that Facebook had been “biased against facts” in its decisions to ban content, including during the recent rioting in Hong Kong.

**Facebook defends stance**

Facebook, which has faced criticism over its handling of content, said it did not filter or block specific groups but instead took a “risk-based and data-driven approach” to content moderation.

“Facebook consistently makes the right choice to protect against the spread of fake news and discrimination, and supports the voices of activists who stand up for the truth,” the social media giant said in a statement.

**Globe Trotter**

**6 December 2021**

A crowd marched to Buckingham Palace in central London on Sunday to call for Britain’s Queen Elizabeth to cut ties with the oil industry and pledge to cut Britain’s own carbon emissions.

The march, called the “Save Our Monarch”, was organized by the campaign group “Our Monarchy, Our Climate”, which is calling for the royal family to become “climate positive”.

The group said the march was to show the world that the UK’s climate crisis is not just a “UK problem”, but a “global problem”.

**European Parliament plans to vote on carbon neutral shipping**

**Deputy**

**6 December 2021**

The European Parliament is set to vote on a proposal to make shipping companies carbon neutral by 2050.

The proposal, which would require companies to reduce their carbon emissions by 50% by 2030 and 100% by 2050, has been backed by the European Commission and some member states.

But the proposal has faced opposition from some shipping companies, which say it would be too costly.

A crowd marched to Buckingham Palace in central London on Sunday to call for Britain’s Queen Elizabeth to cut ties with the oil industry and pledge to cut Britain’s own carbon emissions.

The march, called the “Save Our Monarch”, was organized by the campaign group “Our Monarchy, Our Climate”, which is calling for the royal family to become “climate positive”.

The group said the march was to show the world that the UK’s climate crisis is not just a “UK problem”, but a “global problem”.

**European Parliament plans to vote on carbon neutral shipping**

**Deputy**

**6 December 2021**

The European Parliament is set to vote on a proposal to make shipping companies carbon neutral by 2050.

The proposal, which would require companies to reduce their carbon emissions by 50% by 2030 and 100% by 2050, has been backed by the European Commission and some member states.

But the proposal has faced opposition from some shipping companies, which say it would be too costly.

**Facebook defends stance**

Facebook, which has faced criticism over its handling of content, said it did not filter or block specific groups but instead took a “risk-based and data-driven approach” to content moderation.

“Facebook consistently makes the right choice to protect against the spread of fake news and discrimination, and supports the voices of activists who stand up for the truth,” the social media giant said in a statement.

Please note that the text is not a complete document and seems to be a selection of ideas and topics from various sources, including news articles and blog posts. The text contains multiple references to topics such as Tesla, migration policies, and environmental impact assessments. The overall tone is informative and critical, focusing on the challenges and controversies surrounding Tesla's Giga-Fest event and the construction of its new factory in Germany.
Funding must to roll out new malaria vaccine in Africa

The World Health Organization (WHO) approved a vaccine against malaria during a plenary meeting on October 10, 2021 of its 136-member government members of the Expert Committee on Immunization. The new vaccine, called the Mosquirix (RTS, S), is the first malaria vaccine to be recommended for use by the WHO, and it marks a significant milestone in the fight against malaria.

The vaccine, which is produced by GlaxoSmithKline and the PATH Malaria Vaccine Initiative, is a recombinant subunit vaccine that targets the Plasmodium falciparum parasite, which is the most deadly and transmitted by infected Anopheles mosquitoes. The vaccine is designed to prevent infection and can be given to children as young as nine months old. It is administered on a schedule of three doses, with the first dose given at the age of nine months, the second at 16 months, and the third at 30 months.

The vaccine is particularly important in sub-Saharan Africa, where malaria is a leading cause of death and illness. The WHO estimates that there were 255 million cases of malaria and 3.2 million deaths globally in 2019. In Africa, the continent with the highest number of malaria cases, there were an estimated 935,000 deaths and 210 million cases in 2019.

The approval of the Mosquirix vaccine is a significant milestone in the fight against malaria, which is one of the world's leading killers. The vaccine has the potential to prevent millions of cases of malaria each year and save countless lives, particularly in sub-Saharan Africa where malaria is a major public health problem.

The vaccine is produced by GSK and the PATH Malaria Vaccine Initiative, and it is the first malaria vaccine to be recommended for use by the WHO. The vaccine is administered on a schedule of three doses, with the first dose given at the age of nine months, the second at 16 months, and the third at 30 months.

Greening the hardest sectors

By John Kenworthy

We need leaders making increasingly ambitious long-term policies, especially for greenhouse-gas emissions and for hard-to-abate sectors, effects of climate change. But to convert commitments into meaningful and effective policies, business will need to play its part.

This process will be salutary for industry and society alike. It is important that business recognizes the opportunity to profit from these changes.

Acting now on emissions in these sectors is especially important as new technologies that can substantially reduce emissions are at a relatively early stage. Such a commitment is necessary to ensure that everyone understands which technologies are progressing and what is needed. With this knowledge, everyone can align their efforts to put in place the policies to avoid potentially catastrophic impacts of climate change.

Achieving this level of alignment across global hard-to-abate sectors will be no easy task. Consider the shipping industry, which has already developed a carbon capture and storage partnership under the leadership of the International Maritime Organization's Zero CO2 Coalition. This four-phase alignment process, which involves the creation of a carbon stock pool, is intended to enable carbon capture and storage projects.

The MVP's a global coalition of industrial and environmental leaders working together to accelerate the efficiency of CO2 capture and storage technologies. It is focused on reducing the costs of CO2 capture and storage technologies, which is essential to decarbonize the industrial and power sectors.

The MVP's goal is to bring about a significant reduction in the cost of CO2 capture and storage technologies. By 2030, the goal is to achieve CO2 capture and storage costs of $60 per ton of CO2 captured and stored.

The MVP's work is focused on the development and demonstration of CO2 capture and storage technologies. It is also focused on the development of technologies for CO2 utilization and storage. The MVP is working to reduce the cost of CO2 capture and storage technologies by $90 per ton of CO2 captured and stored by 2050.

Recovering prosperity

By Edmonds Phillips and Mohamed Al-Sabban

As aRESULT of the Covid-19 pandemic, many business leaders have drifted from their traditional values. As a result, the world has been left to face the challenge of sustaining economic growth. This trend has left many businesses struggling, and the need for a sustainable solution is more pressing than ever.

We need leaders everywhere to understand the importance of alternative options and solutions, which will be needed not only to offset additional pressures that can be largely decarbonized, but also to reduce the level of carbon and CO2 emissions already contributing to the atmosphere.

According to historical emissions, the process must that industrial and power sectors involved in activities that have helped start thinking about it now, because we can only go so far before we need to focus on reducing the overall production of carbon and CO2 emissions.
