Theoun's President Aung San Suu Kyi said yesterday that violent clashes in the Rakhine State last week were first arrested over dealings in the Turkish markets, accus- ing ambassadors of these countries, of incitement to violence and treason.

Abdi Korkut, a former justice and development Minister, who is also Chairman of the Supreme Court, said yesterday that the ban is to ensure that Turkey is not used as a base for the PKK.

The UN says that the government of Turkey has been responsible for the displacement of more than three million people from the southeast.

A US envoy urged Washington's support for the government of the Islamic Republic of Iran to continue in the face of challenges, including the ongoing political crisis.

A Turkish official said the government has decided to impose a ban on the import of goods from Iran, as part of efforts to deepen ties between the two countries.

The official told the Addis Ababa Post that Turkey's decision to halt imports from Iran is a move to counter the US sanctions and improve bilateral relations.

The ban, which came into effect on October 31, is expected to affect a wide range of products, including textiles, vehicles, and agricultural commodities.

Turkey has been under US pressure to stop buying Iranian oil.

On Tuesday, the Turkish Foreign Ministry said the ban was in response to Iran's support for terrorism and the PKK.

The PKK, a Kurdish separatist group, has been designated as a terrorist organization by Turkey and the US.

Turkish exports to Iran have fallen sharply in recent months, with the value of goods sold to Iran dropping from $1.2 billion in 2018 to $500 million in the first half of 2019.

Turkey's imports from Iran also fell, from $2.6 billion in 2018 to $1.3 billion in the first half of 2019.

The PKK's activities in Turkey have been a source of tension in the region, with the government accusing the group of launching attacks against Turkish forces.

The ban comes after Turkey announced plans to open a new border crossing with Iran on October 31.

The new crossing, which will be located near the border town of Elbistan, in the eastern province of Elbistan, is expected to boost trade between the two countries.

Turkey and Iran have long been trade partners, with the value of goods traded between the two countries reaching $7.2 billion in 2018.

The Turkish government has said that it hopes to increase trade between the two countries to $10 billion by 2023.
Riyadh abdomen has announced that Dr. Omar Alsaed, a consultant in Orthopedics at the Hamad Medical Corporation (HMC), has been awarded the Stars of Science Season 13 award for his contributions to the field of osteoporosis management. The award was presented in recognition of Dr. Alsaed’s efforts in developing and implementing the FRAX tool, which is a fracture risk assessment tool used to estimate the 10-year probability of suffering from a hip fracture. The tool is based on a series of risk factors that are independently of bone mineral density (BMD). Dr. Alsaed was recognized for his innovative approach to osteoporosis management, which has significantly enhanced the quality of care for patients with osteoporosis in Qatar.

Dr. Alsaed’s appointment as the lead scientist for the osteoporosis management program at the HMC has led to the implementation of a comprehensive approach to osteoporosis management, including the use of the FRAX tool. This tool has been shown to be effective in identifying patients at high risk of fracture and in guiding treatment decisions, leading to improved outcomes for patients.

Dr. Alsaed’s contributions to the field of osteoporosis management have been widely recognized, and he has received several awards for his work. He has been appointed to several key positions, including the National Osteoporosis Society’s Advisory Board and the International Osteoporosis Foundation’s Expert Committee. He has also published numerous articles in peer-reviewed journals, contributing to the advancement of the field.

The Stars of Science award is given to outstanding scientists who have made significant contributions to their respective fields. The award is presented annually, and it is considered one of the most prestigious awards in Qatar.

New health insurance system will save time, cost: experts

The mandatory health insurance system for organizations is expected to save businesses and individuals from unnecessary bureaucracy. This will help to increase productivity and economic growth, while also improving the overall health of the population. The system will also help to decrease the burden on the government by reducing the cost of healthcare for individuals.

The implementation of the mandatory health insurance system is expected to lead to a significant reduction in the number of people without health insurance. This will help to improve access to healthcare, reduce healthcare costs, and improve the overall health of the population.

The mandatory health insurance system will also help to reduce the administrative burden on businesses and individuals. This will help to increase productivity and economic growth, while also improving the overall health of the population. The system will also help to decrease the burden on the government by reducing the cost of healthcare for individuals.

Commercial Bank Launches Self-Service Card Printing Machines

Commercial Bank is introducing its latest innovation, the Self-Service Card Printing Machines. This launch comes in alignment with the bank’s strategy to enhance the customer’s banking experience via digitalization and process automation.

The launch of the Self-Service Card Printing Machines will empower customers to choose the place, time and channel where they would like to avail our services. The whole card printing process takes less than two minutes.

Currently, Commercial Bank provides the Self-Service Card Printing Machines at the Villaggio Mall Branch and Al Waqra Avenue Branch with more locations to be added shortly. The machines are designed for an easy-to-use interface and the latest edge technologies.

The launch of the Self-Service Card Printing Machines will provide an enhanced customer experience as it allows customers to eliminate the wait before getting their cards at any convenient time of the day. Customers are also able to choose their cards, with easy-to-read instructions on how to use the machines.

Experts seek specialised courses for environment inspectors to enforce laws

The Ministry of Environment and Climate Change welcomes environment inspectors through special programmes that will empower them in related fields in order to improve the performance of municipalities and protectorates.

Amin Sah, Marketing Director of Commercial Bank, said, “The Ministry of Environment and Climate Change is a key driver in ensuring the protection of the local environment. We are committed to supporting their efforts to enhance the performance of municipalities and protectorates.”

The development of these courses aims to provide environment inspectors with the necessary knowledge and skills to perform their duties effectively.

“An initiative of this nature not only ensures the protection of the local environment, but also contributes to the overall development of Qatar. We are proud to support such initiatives and look forward to seeing the positive impact they will have,” said Amin Sah.

On the launch, H.E. Dr. Rashid al-Kuwari, Environment and Climate Change Minister, said, “We are committed to protecting and preserving Qatar’s environment and its natural resources. The new initiative will equip environment inspectors with the necessary knowledge and skills to perform their duties effectively.”

The new initiative is part of Commercial Bank’s ongoing commitment to support the Ministry of Environment and Climate Change in its efforts to protect the local environment.

“Commercial Bank is proud to announce its support for the Ministry of Environment and Climate Change. We believe that through our partnership, we can contribute to the overall development of Qatar’s environment,” said Amin Sah.

The partnership between Commercial Bank and the Ministry of Environment and Climate Change is an example of how the private sector can support public sector initiatives.

Al Shebaania Municipality's health control section carried out a joint inspection campaign on street vendors in the farm workers' accommodation there on Friday evening. The campaign, which included 10 volunteers, was aimed at inspecting street vendors, especially those selling items without a licence as well as the removal of waste from the site. The campaign was carried out in coordination with the Ministry of Environment and Climate Change.

The campaign was launched in light of complaints from residents and employees of the site about the conditions of the street vendors, including the sale of food items without proper hygiene and the accumulation of waste.

The inspection campaign was carried out in coordination with the Ministry of Environment and Climate Change and the General Criminal Investigation Department.

The novel coronavirus (COVID-19) pandemic has triggered a growing demand for solutions to improve indoor air quality, and other parts of the world, contributing significantly to prevent and fight the spread of emerging infections, according to Masarat Group.

"Given that Qatar has been an example in the region in dealing with the fight against COVID-19, this campaign is a continuation of the efforts in this regard for the long term as this technology is a pre-eminent one," Masarat Qatar COO Shakeel Siddiqui said.

This already indicates the huge potential of the COP in Qatar with many of the small offices, specifically those with smoking areas. Furthermore, both the travel and room suits are ideal for hotels where gatherings take place.

"Moreover, with life slowly going back to normal and optimal conditions, we want the public to have clean and safe facilities while working and wellbeing of participants and guests also," he added.

Launched by leading venture capital group, Masarat Group, this typical COP is expected to stimulate the continuing and scientific attention and is scientifically proven to ensure made in Qatar COP and its importance for the whole world and its approval will be issued by Masarat Group and the Ministry of Public Health. The COP unit has been made by Moso and can be used in different areas, specifically for homes, apartments, hotels, banks and transportation hubs and is scientifically proven to ensure made in Qatar COP.

The cost of the COP is QR18,500 in Qatar and QR55,250 elsewhere. The COP unit has been made by Moso and can be used in different areas, specifically for homes, apartments, hotels, banks and transportation hubs and is scientifically proven to ensure made in Qatar COP.

The COP unit has a very unusual structure, which is not of any shape or size, but has two inlets, three outlets, one commercial and one private. It has two circular filters, in which the one has a high efficiency filter and a multi-pass of air (99.999%). This technology targets air inhabitants, scientists and engineers, she noted.

"The game-changer of this technology is that it catches and kills the virus in all areas, such as offices and malls, and kills them in the air and fabric," Siddiqui said.

The technology targets air transmission to eliminate the virus, distills the air and re-distributes the same with the same amount of virus in the air. In doing so, recirculating clean fresh, viral-free air helps conserve energy. It effectively recirculates up to 70% of air in the space, which is acceptable under ASHRAE recirculation standards. As for COP, it has a unique feature that most air purifiers either do not have the filter or the one that has it will not kill the virus or need at least 100 microns of particle size to kill the virus. The technology targets air transmission to eliminate the virus, distills the air and re-distributes the same with the same amount of virus in the air. In doing so, recirculating clean fresh, viral-free air helps conserve energy. It effectively recirculates up to 70% of air in the space, which is acceptable under ASHRAE recirculation standards.

Palestinian ministry criticises global stance on Israeli terror

The Palestinian foreign ministry said the global community was failing “the testing” of the Palestinian point of view against Palestinian civil society organisations, in response to the ways of the ongoing crises against the Palestinian people.

In a statement issued yesterday, the ministry said the occupying power to stop its violation of the human rights of the Palestinian people, and its support for Israeli settlements, and the international community, by moving from “formal and fictitious statements” to real action and stopping support for the occupier, it would be a real test for the meaning of the resolutions of the United Nations and other international bodies that concern from time to time about the situation of the Palestinian people.

The Palestinian foreign ministry said the conflict is a result of the so-called peace process that is not effective, and does not contribute to finding a solution to the Palestinian question, and the UN resolutions and international agreements that support the Palestinian people, their state and laws, noting that these positions are maintained and not out of the ordinary.

The statement called on the international community, in particular “the terrorism of the Israeli people” that seeks to prevent the Palestinian people from attaining their rights and their homeland, the land of the “Khalat Al-Nahla” area near the village of Wadi Rabi, south of Bethel in the occupied West Bank, and qualified in different places in the area, stating illegal facts.

Lebanese activists set fire to a post in defiance of the populist movement’s claims. The attack comes ahead of the legislative elections, which are set to be held in May, and are expected to be a test of the movement’s power and its ability to mobilise its supporters. The attack was carried out by a group of demonstrators who set fire to a post in a protest against the government's proposed electoral reforms, which include a mix of proportional and majoritarian systems. The attack was seen as a challenge to the government's ability to maintain control and stability in the country. (AFP)

Sudanese fear falling for a scheme of power to civil power or civil terrorism

A Sudanese activist said that a scheme of power to civilian or civil terrorism could be an option for the Sudanese people if the government continues with the

Vietnam plans to reopen Phu Quoc island to vaccinated tourists in Nov

Vietnam plans to reopen the resort island Phu Quoc to vaccinated foreign visitors in late November, authorities said on Tuesday, as the country looks to reboot its battered tourism industry after two years of closures. Phu Quoc, which lies off the southern coast in the Gulf of Thailand, boasts white-sand beaches and is a popular destination for international visitors, with more than 500,000 foreign arrivals on similar routes ranging from Europe, the Middle East, North East Asia, Southeast Asia, North America and Australia.

A prerequisite is for the Vietnamese and international tourists to enter Phu Quoc on charter flights. Tourists will need a vaccine passport with a negative Covid-19 test result before being allowed in. According to Vietnamese media reports, they should also purchase a package of at least $690, including three nights' accommodation at high-end hotels and flights to and from the island. The Vietnam tourism authority has said the island wishes to receive visitors two weeks before its scheduled date to vaccinate its medical workers. The island aims to receive up to 100,000 people with vaccine passports, with Qantas Airways speeding up plans to restart flights to Phu Quoc.

New Zealand's COVID-19 outbreak spreads to South Island

New Zealand reported its first new community case of Covid-19 in two weeks on Saturday after a man who travelled to a music festival on the country's South Island tested positive. The man had attended two events this weekend and was linked to earlier cases in the North Island that were already under lockdown.

The risk of a further spread from the new community case in the South Island “is low”, said director of health Ashley Bloomfield.

Australia's Melbourne enjoys weekend of eased Covid-19 curbs after long lockdown

Victoria plans to open up to Australia over the weekend, while Melbourne enjoys a COVID-19 curbs weekend after the city emerged from a months-long lockdown.

This is after Victoria recorded no new COVID-19 cases or deaths on Saturday, with restrictions easing in the state.

S Korea says it reaches goal of 70% vaccinations for Covid-19

South Korea has largely successfully managed to cope with the pandemic without imposing lockdowns seen in many other parts of the world, in the wake of intensive testing and tracing, but it has managed to suppress its fourth Covid-19 wave since the country began vaccinations.

Kim Yoon-sik, a professor at Dongguk University in Seoul and a former government health official, said the agency, and avoiding overuse of the Internet. In recent months, Beijing has exercised a more assertive paternal hand this year, from tackling the addiction of youngsters to online games, to curtailing their time spent on social media. Authorities also want to media, authorities also want to

The risks of a further spread from the new community case in the South Island “is low”, said director of health Ashley Bloomfield.

Melbourne, Australia’s second biggest city, is just one of the world’s largest string of Covid-19 lockdowns, with�omatolike street parties, free music and packed parks, bars and restaurants.

While the city is closed, it has also tried to stay connected with friends and family.

Melbourne, Australia. The city has imposed tough restrictions after the recent Covid-19 outbreak in the city. North Korea fired a new missile yesterday amid stalled talks with their Japanese counterparts on Korean Peninsula affairs.

“Peace fanatics” had flown several times over the group’s base.

Local fighters in the western Mountain region, a member of the military alliance, said the agency, and avoiding overuse of the Internet. Authorities also want to media, authorities also want to

Vietnam plans to reopen the resort island Phu Quoc to vaccinated foreign visitors in late November, authorities said on Tuesday, as the country looks to reboot its battered tourism industry after two years of closures. Phu Quoc, which lies off the southern coast in the Gulf of Thailand, boasts white-sand beaches and is a popular destination for international visitors, with more than 500,000 foreign arrivals on similar routes ranging from Europe, the Middle East, North East Asia, Southeast Asia, North America and Australia.

A prerequisite is for the Vietnamese and international tourists to enter Phu Quoc on charter flights. Tourists will need a vaccine passport with a negative Covid-19 test result before being allowed in. According to Vietnamese media reports, they should also purchase a package of at least $690, including three nights’ accommodation at high-end hotels and flights to and from the island. The Vietnam tourism authority has said the island wishes to receive visitors two weeks before its scheduled date to vaccinate its medical workers. The island aims to receive up to 100,000 people with vaccine passports, with Qantas Airways speeding up plans to restart flights to Phu Quoc.

New Zealand reported its first new community case of Covid-19 in two weeks on Saturday after a man who travelled to a music festival on the country’s South Island tested positive. The man had attended two events this weekend and was linked to earlier cases in the North Island that were already under lockdown.

The risk of a further spread from the new community case in the South Island “is low”, said director of health Ashley Bloomfield.

Salvini slams Italy migrant trial, US actor Richard Gere to testify

Italy’s former interior minister and far-right Matteo Salvini last week went on trial accused of allegedly failing to rescue 31 migrants from a ship while in power, in a case that has embroiled the country in one of the biggest recent episodes of immigration. The trial begins in Milan on Monday.

On the opening day of the trial in Turin, Judge Roberto Moro said Salvini failed to save the 31 migrants from the Open Arms, a Spanish charity boat, which has asked the European court of human rights to rule it a humanitarian visit to the ship – and his then-friend former prime minister Giuseppe Conte.

The trial and its opening are expected to be a major milestone in the country’s migration debate, as the case will test the boundaries of what constitutes a human rights violation.

Moldova PM says Russia gas talks still divided as gov’t declares emergency

Moldova’s new government said Monday it would declare a national emergency in response to increased prices for Russian gas, a sign that the country is facing new challenges in its energy security amid the ongoing crisis. 

Ruslan Ablyayev, the country’s energy minister, said that Moldova’s government would declare a state of emergency to ensure the country’s energy security. 

The declaration comes after a difficult week for Moldova, which has struggled to negotiate with Russia over gas prices and has faced criticism from the international community for its handling of the crisis.

The country’s new prime minister, Natalia Gavrilita, took office last week and faces a tough task in stabilizing the economy and meeting the demands of its European neighbors, who have been critical of the government’s handling of the crisis.

Gavrilita’s government has faced criticism for its handling of the crisis, which has led to protests and drawn international criticism. The country’s president, Maia Sandu, has called for a national dialogue to address the challenges facing the country.

In a statement Monday, Gavrilita said that Moldova would declare a state of emergency to ensure the country’s energy security. 

“Moldova’s energy sector is in a uncomfortable situation, and the government must act to ensure that the country’s energy security is not compromised,” Gavrilita said.

The declaration comes as Moldova is facing increased prices for Russian gas, which has led to a sharp rise in the cost of living for its citizens. The government has said that it will work to ensure that the country’s energy needs are met, but it has also faced criticism for its handling of the situation.

Middle East aviation on the cusp of a much-needed recovery

The Middle East aviation industry may see a turnaround in the second half of 2021, with a recovery from the effects of Covid-19 being mitigated and economy recovery faster than expected in the region, particularly in GCC countries. The region has also been a leader in motivating confident passenger travel through multi-faceted initiatives that support international travel recovery.

The FILA World Cup Qatar 2022 and the ongoing Expo 2020 in Dubai are generally seen as key drivers in the region’s economy, particularly in tourism and aviation. Researcher Oliver Wyman expects a slow recovery of the long-haul to long-hub connecting model and an increase of low-cost carriers (LCCs) region-wide, as well as a revival of business travel in the Middle East.

Middle East passenger traffic and the region’s commercial fleet are expected to exceed more than 2.1 billion passengers and over 20,000 aircraft per year, according to Airbus. A recent media event said at least 10 new A320 family aircraft are sold in the forecast 2020-25 demand for commercial airliners and services.

In its 2021 Commercial Market Outlook (CMO), the Chicago-based Boeing saw inflights in the Middle East will return to 90.1% of pre-Covid levels by 2025, with domestic traffic as maintenance and repair worth $740bn, with the region expected to exceed $1.4tn, aerospace giant Boeing said in a recent media event.

Industry recovers, points out André Martins, partner, Oliver Wyman. “This was a wake-up call for Middle East aviation as a whole and an opportunity to recalibrate the region’s aviation industry.”

“Overall, the Middle East aviation industry is on the cusp of a much-needed recovery. The re-establishing of air connectivity, addressing pilot shortages and debt repayments, doubling down the efforts on digital and automation whilst,” says Martins. “The region’s commercial aviation industry is also expected to continue growing, with the remainder of the fleet modernised and the current low-cost carrier fleet growing, creating opportunities for traditional carriers.”

Therefore, governments in the Middle East must develop a clear long-term strategy, with investment in new airports and air traffic control systems, to revamp the commercial offer to bring back air traffic, says Martins.

A look at the World Bank as a cash-transfer algorithm

For now, we must temper our expectations of the its willingness to provide public goods in the face of challenging situations as highlighted in the following challenges:

1. **Protracted Inflation:** The current bout of inflation is part of the broader structural changes in the global economy, including the macroeconomic paradigm. We have gone from deflationary expectations of negative inflation to one in which demands it does not end. Official statistics, which are often manipulated, are indicating that there are still a few signs of inflationary pressures. This has allowed for an easier transition to more expansive monetary policies, potentially fueling inflation. This, in turn, is causing some policymakers to revise their inflation targets. Inflation has been rising steadily, and central banks are now facing the challenge of deciding on a course of action to combat it.

2. **Rising Costs of Living:** Inflation is rising across the globe, leading to increased costs for goods and services, including food, housing, and healthcare. This is causing significant pain for households, particularly those who are already struggling to meet their basic needs. The World Bank has acknowledged that it should be a step toward simplifying the large and complex global public goods system, and reducing the stress on its self-sustaining mechanism.

3. **Geopolitical Instability:** The ongoing talks about replenishing the International Development Association (IDA) are giving rise to concerns about how the Bank will respond. The Bank is a limited provider of global public goods, and a few countries that have been leading the call for more funding are now starting to come to the realization that they may not get the funding they need. The World Bank should be a reason to be stingy in its funding, failing that the United States, the European Union, and other donors to be more generous. Even so, the World Bank and its donors face difficult choices in the face of political instability.

4. **Disruptions in Global Supply Chains:** Disruptions in global supply chains have led to shortages and rising prices. The ongoing pandemic has disrupted supply chains, leading to shortages of essential goods. The World Bank and its donors need to reconsider their policies to ensure that they are not contributing to the problem. The Bank should be a step toward simplifying the large and complex global public goods system, and reducing the stress on its self-sustaining mechanism.

5. **Emerging Market Currencies:** The ongoing pandemic has led to a sharp depreciation of emerging market currencies, leading to inflationary pressures. The World Bank and its donors need to consider the impact of their policies on emerging market economies. The Bank should be a step toward simplifying the large and complex global public goods system, and reducing the stress on its self-sustaining mechanism.

6. **Inequality and Poverty:** The ongoing pandemic has led to an increase in inequality and poverty, particularly in low-income countries. The World Bank and its donors need to consider the impact of their policies on reducing inequality and poverty. The Bank should be a step toward simplifying the large and complex global public goods system, and reducing the stress on its self-sustaining mechanism.

7. **Environmental Sustainability:** The ongoing pandemic has led to increased environmental degradation, particularly in low-income countries. The World Bank and its donors need to consider the impact of their policies on environmental sustainability. The Bank should be a step toward simplifying the large and complex global public goods system, and reducing the stress on its self-sustaining mechanism.
