Moistchar aims to improve Qatar’s water and food security

The Moistchar initiative aims to improve Qatar’s water and food security. It was launched under the chairmanship of Her Excellency Moza bint Nasser, Chairwoman of the Supreme Committee for Delivery & Legacy.

Moistchar is a joint collaboration with Dr Tareq al-Ansari, a member of the College of Science and Engineering, Hamad Bin Khalifa University. We have been working on producing biochar from different types of waste, including food waste, for example. When applied to agricultural soils, biochar can improve the water holding capacity and quality of soils, contributing to the sustainable management of soil fertility and the conservation of both water and food security. In that way, not only does biochar contribute towards resource security, but also boredom the development of circularity by turning waste into value added products, which is an important part of sustainable development.

Why did you get involved with Challenge 22?

We got involved because we wanted to support the Sheffield Challenge 22 programme and to understand the opportunity presented by the production of biochar. We have the chance to work with people with business expertise, thereby enhancing our efforts to realise and leverage the scientific knowledge we have gained.

How has Challenge 22 changed your startup business?

The support from Challenge 22 helped us become a startup business. They have assisted us to market our products, enhancing our opportunities presented by the production of biochar. In this way, we have helped our clients to work with people with business expertise, thereby enhancing our efforts to realise and leverage the scientific knowledge we have gained.

How will your business help protect Qatar and its residents while supporting our efforts to realise and deliver the tournament to legacy?

Moistchar is a joint collaboration with Dr Tareq al-Ansari, a member of the College of Science and Engineering, Hamad Bin Khalifa University. We have been working on producing biochar from different types of waste, including food waste, for example. When applied to agricultural soils, biochar can improve the water holding capacity and quality of soils, contributing to the sustainable management of soil fertility and the conservation of both water and food security. In that way, not only does biochar contribute towards resource security, but also contribute towards the development of circularity by turning waste into value added products, which is an important part of sustainable development.

Moistchar is in the context of the activities of the Qatar-France 2020 Year of Culture which bridged communication between Qatar and France by organising joint cultural events. La Monnaie de Paris is the French National Library and in La Monnaie de Paris Marc Schwartz on the occasion of the Qatar-France 2020 Year of Culture.

Moistchar aims to improve Qatar’s water and food security. Moistchar has been in operation for eight months, since November as additional quarantine facilities become available, Qatar Airways said in a statement yesterday. All returning guests are now expected to return to Qatar in March for 85,000 guests in 60 hotels and Mekaines locations.

The stringent hotel quarantine measures have helped kickstart the production of Moistchar. It started by turning waste into biochar. The Moistchar initiative aims to improve Qatar’s water and food security. In that way, not only does biochar contribute towards resource security, but also contribute towards the development of circularity by turning waste into value added products, which is an important part of sustainable development.

Qatar Islamic Bank (QIB) announced yesterday that it named Absher Rewards Programme as its newest sponsor.

The joint venture will see the launch of a new Absher-QIB rewards programme, aiming to provide customers with exclusive benefits and offers.

The new programme will enable customers to earn points and redeem them for a wide range of benefits, including exclusive rewards, discounts, and access to exclusive events.

Absher Rewards Programme is one of Qatar Islamic Bank’s key customer-facing initiatives, with millions of users already benefiting from exclusive offers and discounts.

QIB Executive General Manager Absher Ahmed Al-Mohannadi said: “We are delighted to announce the launch of our new Absher-QIB rewards programme, which we believe will provide our customers with even more value and benefits.

This partnership is a natural extension of our commitment to providing our customers with the best possible service and offering them a seamless experience.

We are confident that this new programme will be well received by our customers and will help us to remain at the forefront of the banking sector in Qatar.”

QIB CEO Ali Bin Ali Al-Kuwari added: “We are excited to partner with Absher Rewards Programme on this new initiative, which we believe will provide our customers with even more benefits and offers.

This partnership is a testament to our commitment to providing our customers with the best possible service and offering them a seamless experience.

We are confident that this new programme will be well received by our customers and will help us to remain at the forefront of the banking sector in Qatar.”

The new programme will offer customers a range of benefits, including exclusive rewards, discounts, and access to exclusive events.

11 Italian companies showcase expertise and innovation

By Raeesa Ahmad
Assistant Reporter

Agricultural and environmental exhibitions begin

He added that the exhibitions feature a wide array of displays, including many innovative technologies, and that the State of the Environment Book of the State of Qatar, and the first qatari encyclopedia of its kind for plants in the eastern Arabie Peninsula, is co-organised with the Golf Operation for Research in Development (GORD). Moreover, many environmental institutions, private companies, and local businesses have the opportunity to support efforts to advance the agricultural and environmental sectors in the country, he said.

Chairman of the Organising Committee of the Exhibition and director of the Public Affairs Department, emeritus Mohamed Ali Al-Massri, said that the event provides a platform to connect and activate the role of scientific research in decision-making to ensure that public and private sectors work through pre-prepared meetings to discuss partnerships and potential opportunities.

The event also highlighted the 100th anniversary of Leonardo da Vinci, the Italian Renaissance pioneer, and unveiled the innovative Eco Car, a micro car that runs on bio-fuel, and other digital platforms.

The participating Italian companies specialise in the agriculture and green economy sectors, ranging from one drop to drop in plastic production, green energy and technologies that guarantee full-quality control, and gluten-free and natural food for local consumption.

"This new product development follows the acquisition by Al Mana International Holding of the COOP milk and organic fertilisers production codes are available for any company interested to visit the exhibition to see the expertise and services of the 11 participating Italian firms," said El-Massri.

The Italian Ambassador to Qatar, Roberto Cingolani, and Giorgio branch manager Danieli Giorgio (second left) Italian ambassador Alessandro Prunas, a veteran green management representative (right) during the opening of AgriteQ. PICTURES: Waleed Al-Khateeb

The Italian ambassador to Qatar, Roberto Cingolani, and the first Qatar International Environmental Exhibition (EnviroteQ) have lauded the hosting of the event, which is the second international environmental exhibition to be held in the country.

"This also sends an environmental message that is aligned with the cultural Exhibition and Convention Centre (DECC), along with the second Qatar International Environmental Exhibition (EnviroteQ), until March 27 at the Doha Exhibition and Convention Centre.

The concept, he stressed, demonstrates the importance of the expo for Qatar and the region. The event provides a specialised platform for Italian companies to showcase their products to the public and private sectors in Qatar, with the second Qatar International Environmental Exhibition (EnviroteQ) 2021.

The event also highlighted the 100th anniversary of Leonardo da Vinci, the Italian Renaissance pioneer, and unveiled the innovative Eco Car, a micro car that runs on bio-fuel, and other digital platforms.

The participating Italian companies specialise in the agriculture and green economy sectors, ranging from one drop to drop in plastic production, green energy and technologies that guarantee full-quality control, and gluten-free and natural food for local consumption.

"This strategy arises out of our desire to preserve the beauty of the Earth and provide food that is free from gluten and harm to the environment," Al-Massri said.

"We are confident that 'Made in Qa- tar' range will be warmly welcomed by the local market which will wish to be fully committed to the environmental and ecological goal that gives us a leading role in the pursuit of a green community in Qatar," he added.

Mazzratty develops a fully environ- mental-friendly product range for organics and natural products. The company was founded in 1957 by the family Mazzratty and is the largest dairy company in the country.

"This is also in line with its board and management's vision of fulfilling the market demand for healthy, natural products and providing organics and natural products, said El-Massri.

"This is another pioneering development following the acquisition by Al Mana International Holding of the COOP milk and organic fertilisers production codes are available for any company interested to visit the exhibition to see the expertise and services of the 11 participating Italian firms," said El-Massri.

The Italian ambassador to Qatar, Roberto Cingolani, and the first Qatar International Environmental Exhibition (EnviroteQ) have lauded the hosting of the event, which is the second international environmental exhibition to be held in the country.

ONCECS organises virtual workshop on volunteer work

The virtual workshop titled “Volunteer Work and the Local Community” was held on November 7 as part of the Arab Innovation Academy (AIA), which is a hands-on and immersive experience that allows participants to develop their innovation skills and take on the role of a ‘youth entrepreneur’.

The workshop was a collaboration between the Arab Innovation Academy (AIA), Hamad Bin Khalifa University, the European Innovation Academy (EIA), and the Arab League Educational, Cultural and Scientific Organisation (ALECSO).

The workshop started with an introduction by Dr. Majid Ali al-Abdulla, chairman of Hamad Bin Khalifa University’s (HBKU) initiative in Qatar, followed by an overview of the Arab Innovation Academy (AIA) and its efforts to develop young entrepreneurs in Qatar.

Dr. Richard O'Kennedy, vice-president for Research at QF RDI, was the keynote speaker for the workshop. He spoke about the importance of innovation and entrepreneurship in Qatar, and how the AIA is working to support young entrepreneurs in the region.

The workshop also featured a panel discussion on the role of volunteers in the community, with panelists from Qatar and the Arab region. The panelists shared their experiences and insights on how volunteering can help build a better community.

Designing Post-Covid Health (DPCH) is a National Network for Complex Health (NNCH) initiative within Qatar, in partnership with the Arab League Educational, Cultural and Scientific Organisation (ALECSO) and the European Innovation Academy (EIA).

The workshop aimed to raise awareness about the importance of volunteering and how it can help build a better community.

The community service expansion involves more mental health clinics opened in primary healthcare centres across Qatar, as well as targeted training of primary healthcare providers to support early recognition and support for patients experiencing mental health issues, especially during critical times.

Hamad Medical Corporation (HMC) recently hosted its sixth annual Health Symposium in Qatar titled “Health in the Time of the Pandemic”. The symposium, which took place on November 7, focused on the theme of “Volunteer Work and the Local Community”.

The symposium aimed to raise awareness about the importance of volunteering and how it can help build a better community.

Libya's eastern administration hands power to interim gov't

The country's eastern administration handed power to an interim government yesterday after voting to extend an emergency rule until the next general elections, in a step hailed by diplomats and leaders from outside the conflict-ridden country.

The new cabinet, which has the backing of the United Arab Emirates (UAE), is expected to serve until elections are held at the end of this year.

The move comes after weeks of political uncertainty and amid an international push to implement a UN-backed ceasefire deal brokered last year.

Residents in the eastern region of Libya, where the new cabinet will be based, have been waiting for a stable government to take hold and bring an end to the country's longstanding conflict.

The UAE-backed administration, which was formed in May, has struggled to gain traction and has been criticized for its lack of legitimacy.

The new cabinet will be led by Abdul Hamid Dbeibah, who was appointed by the Government of National Unity (GNU) in March.

The GNU, which is supported by the UAE, has struggled to gain the support of other political groups in Libya.

"The new cabinet is a step forward in the political process," said a diplomatic source.

"But there is still a long way to go before stability is achieved in Libya."
Pride in Canada told a growing Indigenous movement that the country was "built on theft" while being “shaped by violence”.

The statement, which included a scathing critique of Canada’s colonial history, was shared by Prime Minister Justin Trudeau and Indigenous Affairs Minister Jane Philpott.

"We are told that our country is built on theft, shaped by violence, that the stories we tell are not our own, and that the debates we stage in Parliament matter very little to the communities whose lives are impacted by the policies we pass," the statement said.

The statement was released as part of a wider campaign aimed at raising awareness about the impact of colonialism on Indigenous peoples.

"We are told that our country is shaped by violence, that the debates we stage in Parliament matter very little to the communities whose lives are impacted by the policies we pass," the statement said.

The statement was released as part of a wider campaign aimed at raising awareness about the impact of colonialism on Indigenous peoples.

India to expand vaccination amid case surge

*Reuters*

**India**

A weekly📮

India has issued a weather alert in the country of 25mn, posted weather warnings in the worst downpour in more than a decade, sweeping away the lives of dozens yesterday as torrential rains tore through the northern states. The government on Monday warned that all residents in areas hit by heavy rain should stay indoors and stay in touch with family members. The nation’s high-priority pandemic vaccine programme has boosted the country's ability to manage the spread of the virus.

**Crackdown in Myanmar claims youngest victim**

A seven-year-old girl is the youngest victim of the Myanmar military coup, the junta’s Zaw Min Tun said on Monday, as the junta carried out its first mass execution after overthrowing the democratically elected government. The junta has been accused of widespread human rights violations and the UN has called for an independent investigation into the situation.

**Fire at Rohingya camp kills 15, leaves 400 missing**

A fire broke out on Monday at a refugee camp in Myanmar’s Rakhine state, killing 15 people and leaving 400 others missing. The fire, which started in a warehouse, spread rapidly and engulfed a nearby residential area. The government has sent rescue teams to the scene and launched an investigation. The incident comes as Myanmar’s military continues to face international condemnation for its actions in Rakhine state.

**Thousands evacuated in Australia's worst floods in nearly a decade**

Australia has seen some of its worst floods in nearly a decade, with thousands of people being evacuated from their homes in the state of New South Wales. The floods have been caused by heavy rains and strong winds, and have led to widespread evacuations. The situation is expected to worsen in the coming days as more rain is expected to fall.
When an artist wants to sell a work, they create, or “mint,” an NFT that will from then on stand as a digital claim on ownership for the piece. NFTs are registered on open blockchain ledgers, making it possible to track ownership, prior sales price and the like. When a flying cat leaving a rainbow trail went for almost $600,000 and ownership.

NFTs are irreplaceable digital certificates of authenticity created by an algorithm. 

NFTs can be used for anything, including physical objects. There’s also a burgeoning market for sports collectibles. Manchester City have launched their own NFT fan token that will allow supporters around the world access to VIP rewards, club promotions, games as well as augmented reality-enabled features.

The Bedfont local for the NBA’s biggest stars have been sold on NFT market for hundreds of thousands of dollars. Even digital assets like tweets can be sold as NFTs. Twitter co-founder Jack Dorsey has put NFT representing the first message on the platform (“just setting my twttr”) on the auction block.

NFTs are also being developed for more utilitarian uses. Walmart uses the technology for managing the supply chain for the food it sells. In real estate, by putting NFTs representing titles on a blockchain, the need for title searches on ownership for physical works even of famous artists. That selling fake tokens is all but impossible, which can’t always be said of physical works even of famous artists. NFTs are digital certificates of authenticity: A unique, nonreplicatable identifier created by an algorithm.

NFTs are irreplaceable digital certificates of authenticity created by an algorithm.

NFTs can be used for anything, including physical objects. There’s also a burgeoning market for sports collectibles. Manchester City have launched their own NFT fan token that will allow supporters around the world access to VIP rewards, club promotions, games as well as augmented reality-enabled features.

The Bedfont local for the NBA’s biggest stars have been sold on NFT market for hundreds of thousands of dollars. Even digital assets like tweets can be sold as NFTs. Twitter co-founder Jack Dorsey has put NFT representing the first message on the platform (“just setting my twttr”) on the auction block.

NFTs are also being developed for more utilitarian uses. Walmart uses the technology for managing the supply chain for the food it sells. In real estate, by putting NFTs representing titles on a blockchain, the need for title searches on ownership for physical works even of famous artists. That selling fake tokens is all but impossible, which can’t always be said of physical works even of famous artists. NFTs are digital certificates of authenticity: A unique, nonreplicatable identifier created by an algorithm.

When an artist wants to sell a work, they create, or “mint,” an NFT that will from then on stand as a digital claim on ownership for the piece. NFTs are registered on open blockchain ledgers, making it possible to track ownership, prior sales price and the like. When a flying cat leaving a rainbow trail went for almost $600,000 and ownership.

Pakistan buys over a million Chinese vaccine doses

Reuters

Pakistan has bought more than 1.2 million doses of Chinese Sinopharm and CanSino vaccines, its health minister announced on Wednesday, denying claims by some manufacturers having previously advertised on social media that they had not confirmed this yet. They cost around $12 a shot, and are the third batch to arrive.

“Pakistan has so far relied on donations, the government said yesterday.”

Supreme PK asks govt to regularise interest rates

Six Supreme Court judges went on record yesterday to demand that the government regularise interest rates in the financial sector and bring them to market levels.

Qatar marks World Meteorological Day

Qatar joined other countries in celebrating the World Meteorological Day. The day was celebrated under the theme “The Ocean, our climate and weather”.

Qatar pays great attention to aspects of meteorology and climate change in order to ensure sustainable development and promote green development.

The date of this global event is so chosen to allow the international community to reflect on the importance of climate change and its impacts on human lives.

Qatar’s chief meteorologist explained that the theme of 2022 World Meteorological Day was chosen to coincide with the celebration of the 75th anniversary of the World Meteorological Organization (WMO) and its member states' dedication to improving global climate forecasting and understanding.

The national plan for climate change in Qatar is based on the general strategies and initiatives of the Environmental Protection Authority (EPA), which implements a number of projects to reduce greenhouse gas emissions and promote sustainable development.

Qatar continues to work closely with the WMO to ensure the integration of climate and weather data into national planning and decision-making processes.

The celebration of the World Meteorological Day in Qatar was marked by a virtual event at the Ministry of Culture and Sports, which was attended by representatives from various fields, including government officials, scientists, and students.

The opening ceremony was held at the Qatar National Convention Center, where His Excellency the Amir Sheikh Tamim bin Hamad Al-Thani delivered a speech highlighting the importance of the event and emphasizing the need for international cooperation in tackling climate change.

The closing ceremony was held at the Qatar National Museum, where a special exhibition was dedicated to climate change and its impacts.

The event was also characterized by the participation of a number of local and international scientists, who shared their latest research findings and insights on climate change and its implications.

The celebration of the World Meteorological Day in Qatar was marked by a variety of activities, including a virtual conference, an exhibition, and a series of public talks and workshops.

The conference also highlighted the importance of sustainable tourism destinations and the need for international cooperation in promoting green tourism.

The exhibition was dedicated to illuminating discussions on soft power and the strategies used by Qatar to keep its rank as a sustainable tourism destination.

The conference also highlighted the importance of sport and tourism, and discussed the proper use of advertising to promote Qatar as a destination for sports tourism.

Dr. Nitin Patil, executive director of the Board of Governors of Stenden University, Qatar, said that the event was a great success and that Qatar is committed to promoting sustainable tourism and supporting cultural initiatives.

“Qatar is a country that has made significant strides in the field of environmental protection and sustainable development,” he said. “We are committed to promoting green tourism and supporting cultural initiatives that contribute to the growth of the local economy.”
