Qatar investment initiatives ‘make the world a better place’

Qatar, the small desert nation, is turning its attention to making the world a better place, with its initiatives aimed at solving global challenges. The Qatar Foundation, a non-profit organization, hosts a variety of projects that focus on enhancing education, science, technology, and sustainability.

One such initiative is the Qatar National Research Fund (QNRF), which supports research projects that address global challenges. The foundation has awarded grants to scientists and researchers from around the world to work on projects that tackle issues such as climate change, renewable energy, and public health.

Another initiative is the Qatar National Library (QNL), which houses one of the largest collections of Islamic art and culture in the world. The library aims to preserve and disseminate knowledge, promoting cultural exchange and understanding.

Qatar’s investment in education and research is evident in its hosting of international conferences and seminars, as well as its support for academic institutions. The Qatar National University, for example, has partnerships with universities worldwide, and its faculty includes some of the best minds in their respective fields.

Qatar’s commitment to making the world a better place is not limited to its domestic efforts. The country has also been a vocal advocate for the rights of women and children, and its leaders have spoken out against human rights abuses in neighboring countries.

In conclusion, Qatar’s investment initiatives reflect its belief in the power of education and research to make a positive impact on the world. By addressing global challenges and promoting cultural exchange, Qatar is making a valuable contribution to a better future for all.

QFRI develops method to fight corrosion in oil, gas pipelines

Qatar Foundation Research, Devel- opment, and Innovation (QFRI) has developed a novel method to fight corrosion in oil, gas, and water pipelines. The method is based on the principle that corrosion is a process of metal degradation, and therefore, if the process can be interrupted or slowed down, the corrosion can be controlled.

QFRI’s method involves the use of a corrosion inhibitor that is designed to react with the metal surface and prevent the formation of corrosion by-products. The inhibitor is applied to the pipeline surface in the form of a coating, and it acts as a barrier to the corrosion process.

This method is particularly useful in offshore environments, where the corrosive conditions are harsh and traditional corrosion control methods may not be effective. QFRI’s novel method offers a cost-effective and environmentally friendly solution to the problem of corrosion in oil, gas, and water pipelines.

Vaccination for all attendees of FIFA World Cup Qatar 2022: FM

The Qatar Ministry of Public Health announced that all attendees of the FIFA World Cup Qatar 2022 will be vaccinated before entering the country. The government has made vaccinating all attendees a priority, with the aim of ensuring a safe and healthy environment for all.

All attendees, regardless of their vaccination status, will be required to undergo a mandatory vaccination process before entering Qatar. This includes both vaccinated and unvaccinated attendees.

The government has also stated that all attendees will be required to undergo a mandatory COVID-19 testing process before entering the country. This is to ensure that any potential COVID-19 cases are detected and isolated before they can spread.

Al Sadd face Al Nasri in search of first victory

Al Sadd face Al Nasri today in search of their first victory in the Qatar Stars League. The game is set to be played at the Khalifa International Stadium in Doha, with both teams looking to build on their recent form.

Al Sadd have been in good form recently, with their most recent game ending in a 1-1 draw against Al Gharafa. Their young才 to give Qatar a competitive edge in the tournament.

On the other hand, Al Nasri have been inconsistent, with their most recent game ending in a 2-2 draw against Al Rayyan. However, they will be looking to bounce back from their defeat against Al Rayyan and make it a winning start for them.

The game promises to be an exciting one, with both teams looking to demonstrate their skill and determination. It will be a test of their ability to adapt to the conditions and make the most of their chances.

Both teams will be looking to secure a victory to boost their confidence and set the tone for the rest of the season. It is expected to be a fierce battle, with both teams pushing hard to come out on top.

The game will be a vital test of the teams' ability to compete at the highest level of Qatar football. It will be an opportunity for them to show their skills and determination, and give the fans something to cheer for.

Ramadan Imsak

Imsak is a period of prayer and fasting that is observed during the holy month of Ramadan. It is a time for introspection and self-reflection, as well as a period of community solidarity and charity.

During Ramadan, Muslims refrain from eating, drinking, and engaging in sexual activity from dawn until sunset. This period is a time for personal growth and spiritual development.

The month of Ramadan is observed by Muslims worldwide, and it is considered a time of great spiritual significance. It is a time for Muslims to renew their commitment to their faith and to reaffirm their principles.

Qatar has a long history of observing Ramadan and has made significant contributions to the global Muslim community. The country hosts a number of events and programs during the month, including iftar and suhoor gatherings, as well as community events.

Qatar’s efforts to support the global Muslim community during Ramadan reflect the country’s commitment to promoting peace and understanding. The country’s efforts to support the global Muslim community during Ramadan reflect the country’s commitment to promoting peace and understanding.
Going digital: Tasmu will play a key role in Qatar’s health sector

The MoTC programme support will be deployed with an aim to address gaps in population growth, environmental, and food solutions

Tasmu is a highly valued programme for the health sector in Qatar, providing high-resolution satellite images from the Centre for Geographic Information System to assist professionals with advanced advice for their projects, and ensures them of proper land use. The projects and performances are tested and validated through the MoTC programme, where the UK’s health sector will be deploys with an aim to address gaps in population growth, environmental, and food solutions.

The year 2020 also saw the successful completion of phase 1 of the one-of-the-National Food Security Advisory solutions, in collaboration with the stakeholders, the refreshed National Food Security Advisory platform of the MoPH, which acts as a centralised database integrating information from various stakeholders and provides recommendations to government officials and the public. The next phase is scheduled to introduce new features of the MoPH in 2021 when it will be fully launched.

Qatar Food Security Advisory

The report is available on the website of the Ministry of Agriculture and Livestock Development (MoALD). The report includes remarks and challenges for farmers, including the use of advanced technology and increased productivity. The report also highlights the importance of government interventions to support local production and reduce import dependency. The report concludes that Qatar’s workforce needs to be equipped with the necessary skills and knowledge to contribute to the food security efforts in the country.

The authorities made Qatar continue the measures that the country has taken during the previous FIFA tournaments. The Enhancing Safety and Security (ESS) office of Qatar Police has taken the necessary arrangements for the security of FIFA World Cup 2022.

QF RFID develops new method to fight corrosion in oil, gas pipelines

From Page 1

The role of the sensor is to identify potential problems even before they can happen, allowing us to take corrective action in time.

首席研究员 said, “Our research group has developed a new method to identify potential problems even before they happen, allowing us to take corrective action in time.”

"We have created a sensor that can communicate this critical information to the user in real-time, allowing us to improve the overall efficiency of the pipeline," he said.

Engaging in fasting can bring feelings and social groups closer together and this can be beneficial for mental health. For women, it can be more important than ever to maintain healthy habits and social interaction.

Fasting during the holy month of Ramadan is an effective way to manage depression and anger, and to maintain mental and emotional balance. During Ramadan, families come together to break their fast each evening and many of the table leanings and other social activities seen during the festival can have positive benefits.

The smart-coupons also allow us to follow the movement of infected individuals and detect potential outbreaks early by detecting local concentrations.

Fasting can also help improve self-maintained behaviours, where the informal movement in real-time at the local level changes the local behaviour.

The development of an enhanced robotic vehicle, ROV, is a joint development by Qatar Petroleum and Shell in the field. We developed a device called ROV-GTL, which is usually equipped with cameras and lights to transmit images and even video back to the user. Depending on the purpose of the work, ROVs may also contain equipment such as cutting tools, cameras and other sensors to perform specific tasks.

The work is ongoing, and the results of this work are expected to be published in a future edition of the Journal of Petroleum Technology.
Food, sleep balance vital to experience benefits of Ramadan: wellness expert

Dr Fathia Djezzar is a medical doctor, health and wellness expert associated with Mandarin Oriental, Doha Resort. The resort blends medical doctor, health and wellness expert services during Ramadan, with sleep, playing a crucial role in regulating both our mood and weight. Due to the transformational of the daily routine that our bodies experience, there can be a lack of awareness about the importance of sleep and its influences, pain being a common complaint for many Ramadan observers. This is not unexpected, as the lack of rest and representations of the fasting has an impact on the body's water retention and growth. Dehydration leads to sleeplessness, further undermining the body's ability to give rest to one's digestive system.

What would be your three key takeaways to keep energy levels up during the day, while well-balanced and without fatigue?

Dr Fathia Djezzar

Mandarin Oriental launches accommodation packages, at-home dining for Ramadan

QU marks Palestinian Land Day with talent competition

Palestinian Land Day, which is commemorated annually on March 30, is a day that celebrates the right of return and the land and all that it stands for. It is a day to honor the spirit of resilience and perseverance in the face of adversity. The day is marked by various events and activities that aim to raise awareness and promote the importance of land and its rights.

On March 30, the University’s (QU) Elia Club and Youth for Jerusalem Association organized a talent competition to mark the day. The competition aimed to celebrate the rich cultural heritage of the Palestinian people and to raise awareness about the importance of land.

KSA conducts annual blood donation drive

ACS Doha students inspired by leading innovators

Leading innovation from the world of sustainability, healthcare and education has been inspiring the next generation of leaders at ACS Doha’s virtual round table – the fourth iteration of leaders at an ACS Doha event.

The round table featured three expert panellists: Tamsin Greulich-Smith, Qatar-based advocate, revealed how innovation has driven his successful business; and Brinita Gong, professional learning and growth lead at ACS International Schools, reaffirmed one of its core beliefs: “If there is anything that education teaches us, it is that there is always something new to learn in the light of the constant change we experience.”

According to Tamsin Greulich-Smith, “Every day presents a chance to challenge what we know. What is important is being善于 existing opportunities and becoming comfortable with the idea of embracing the new. “[Innovation] can challenge what we know and can challenge what we know and can transform society.”

Speaking on the link between innovation and sustainability, Brinita Gong said: “Today, the innovator must be ‘adventurers’ – not just explorers, but ‘tinkers’, individuals who take an active role in making the world a better place.”

8th High School Wooden Bridge Competition ends

The 8th High School Wooden Bridge Competition, held by the Qatar University, College of Engineering (QU-CENG), ended last week. The ceremony last week.

The first place was awarded to Ahmed bin Hamad Secondary School for Boys. The second place to Al Shahnahya Secondary School and the third place to Al Shahnahya Secondary School for Boys.

Commenting on the event, Mohamed Hussein, head of the Department of Civil and Architectural Engineering said: “This competition is a way to showcase civil engineering skills among Qatar secondary school students by providing them with the opportunity to test and design small bridges that can bear loads. This competition is a way to showcase the principles of civil engineering, to highlight its importance to life and industry, and to attract distinguished Qatar students to the civil engineering field.”

Concerning the competition rules and requirements, Dr Wael Al-Habash, associate professor in the civil engineering department and competition supervisor, said: “It’s a secondary school participation in the competition, and it’s open to the students of all schools in Qatar. Beyond technology, innovation can challenge what we know and can challenge what we know and can transform society.”

Horoscope

ARIES
May 21 — June 20
In your workplace upgrading its equipment? Are you in the process of increasing your technology skills? Today planets show that success is off the table if you don’t consider the tools at your disposal. Some close friends could turn you on to a new interest or perhaps a new group you are interested in (4). This promises to be a busy, productive day (5). Expect the unexpected! (5).

Taurus
April 20 — May 20
Technology could pave the way for you to greatly increase your income. Technology could be involved in some way, or a long-term goal you've been driving for finally brings in some benefits. These might be unexpected outcomes that come your way, or aspects of your own way. Expect the unexpected! (5).

Cancer
June 21 — July 22
More paperwork or in your workplace could be poured into a group you’re associated with. This could be a lot of time today. Some close friends could turn you on to a new interest or perhaps a new group you are interested in (4). This promises to be a busy, productive day (5). Expect the unexpected! (5).

Leo
July 23 — August 22
Career and your personal life could see some rather revolutionary moves about some of your deepest desires. You could become involved with a group associated with experiential travel. Support on some keys could come your way. Technology could be involved in some way, or a long-term goal you've been driving for finally brings in some benefits. These might be unexpected outcomes that come your way, or aspects of your own way. Expect the unexpected! (5).

Virgo
August 23 — September 22
A healthy balance between work and personal life could lead to a new level of success. The Internet or communications from others could not only put you on the map but also make your name known in new quarters. This promises to be a busy, productive day (5). Expect the unexpected! (5).

Libra
September 23 — October 22
Some close friends could turn you on to a new interest or perhaps a new group you are interested in (4). This promises to be a busy, productive day (5). Expect the unexpected! (5).

Scorpio
October 23 — November 21
Sudden lucky breaks could come your way today. Scorpio, perhaps rekindling your knowledge of photography, computer graphics, or mathematics.

Sagittarius
November 22 — December 21
Today you might have the desire to break free from your daily routine. Sagittarius, particularly regarding monetary matters. You might consider developing a business of your own, one that would give you a lot more freedom than you currently have. This might be a healthy balance between work and personal life could lead to a new level of success. The Internet or communications from others could not only put you on the map but also make your name known in new quarters. This promises to be a busy, productive day (5). Expect the unexpected! (5).

Aquarius
January 20 — February 18
Technology could pave the way for you to greatly increase your income. Technology could be involved in some way, or aspects of your own way. Expect the unexpected! (5).

Pisces
February 19 — March 20
The unexpected need to take a journey by air or spend a lot of time working could bring about an inconvenient separation from someone you're close to. This promises to be a busy, productive day (5). Expect the unexpected! (5).

Gemini
May 21 — June 20
If a cold front moves in, you’ll need to pay attention to the weather. Expect the unexpected! (5).

Libra
September 23 — October 22
Some close friends could turn you on to a new interest or perhaps a new group you are interested in (4). This promises to be a busy, productive day (5). Expect the unexpected! (5).

Cancer
June 21 — July 22
More paperwork or in your workplace could be poured into a group you’re associated with. This could be a lot of time today. Some close friends could turn you on to a new interest or perhaps a new group you are interested in (4). This promises to be a busy, productive day (5). Expect the unexpected! (5).

**India pledges big boost in vaccine output as Covid-19 cases surge**

India has pledged to increase its vaccine production capacity to 100mn doses a month by June, raising monthly output by 50mn doses in the coming months, India’s health minister said yesterday.

The country, which was once a world leader in vaccine production, is now struggling to cope with an influx of patients and states set up thousands of field hospitals to deal with the rising cases.

“The current production capacity of roughly 30mn doses a month is not enough to cope with the situation,” Dr Harsh Vardhan, the UN’s chief of health, said.

He added that the government would provide training on how to boost Covaxin, its only domestically made shot, and restore democracy.

India has reported the most incidents of its own Covid-19 vaccine, raising monthly production targets, pegged current capacity at 10mn doses a month. Ten million vaccine doses are to truly unite in beating this virus, the minister said.

“Despite the low production capacities at the moment, we have taken steps to raise production at manufacturers and track imports of other vaccines. The ministry of science and technology is monitoring the target, targeted current capacity at 100mn doses a month. The current production capacity of roughly 30mn doses a month is not enough to cope with the situation,” Vardhan said.

He added that the government would provide training to raise production capacities.

India’s daily vaccinations peaked at 4.5mn doses on April 5 but have averaged 1.4mn doses a day since then, according to the government’s Covid-19 portal that collects information from hospitals.

The AstraZeneca vaccine, made by the University of Oxford and the Serum Institute of India (SII), accounts for more than 91% of the 115.5mn doses given in the country so far. The SII, the world’s biggest vaccine manufacturer, has been hit by a raw-material shortage, and Vardhan acknowledged that the Standish had been a disappointment.

He also became a partner of the Foundation for a Better India that set up thousands of field hospitals, preserving for the time being from the Australian watchdog that the Standish had been a disappointment.

Russia retaliates against US, asks 10 diplomats to leave country

Hundreds queue up as Latvia offers walk-in AstraZeneca shots

Ukraine pushes for four-way talks including Russia to restore ceasefire

Denmark speeds up reopening of new viruses cases ease

Russia yesterday asked 10 US diplomats to leave the country in retaliation for the administration of US President Joe Biden, who has imposed a confrontational course, “the ministry said.

The standoff has fuelled tensions between Moscow and US President Joe Biden’s administration, a prospect that could herald a new round of sanctions on Russia.

The Russian foreign ministry said it would also and the activity in Ukraine of US NGOs which it believes engages in the country’s internal affairs, while Sergei Lavrov, the foreign minister, spoke of youthful, “palatable” missions engaged in activities that Moscow supposed to make it harder for the 400,000 staff members.

The US administration in turn said it would not be increasing the number of US government sanctions imposed on Moscow a day earlier, of US National Security Advisor, Blinken, and, as Civil Rights Department.

Washington said its own sanctions were aimed at specific individuals and entities.

Biden is also lobbying Nato leaders to speed up their own efforts. He has also proposed that he limit on outdoor public gatherings by 50 per cent, allowing for gatherings of mass testing capacity, allowing for gatherings of mass vaccination schemes are contingent on the context of unfolding events. “We would like to avoid a dangerous escalation,” the ministry said.

But it requires that we stick to a confrontational course, “ the ministry said. “The US administration in turn said it would not be increasing the number of US government sanctions imposed on Moscow a day earlier, of US National Security Advisor, Blinken, and, as Civil Rights Department.

Washington said its own sanctions were aimed at specific individuals and entities.

People who work in the arts and humanities have started doing something that larger society has only just started contemplating: Cancelling in the face of the pandemic, of course. Every day, they check Covid-19 case numbers, how close they are to the first lockdown, and how many people in their area got vaccinated the day before.

Meanwhile, social media is awash with worries and concerns about all manner of other issues. Is global poverty decimating or recovering? How are countries now managing the latest lockdowns? Is the US poised to be dragged into war? The scramble, sometimes leading to heated arguments, results from people trying to make sense of a crisis that they are being asked to support or position themselves against.

But in the arts and humanities, there is something else to worry about, no matter how much we might want to downplay it: the risks of being deemed inhuman.

If, for example, you worked as a graphic designer, you might be deemed inhuman if you had not thought of ways to adapt your work to the current digital landscape. If you were a novelist, you might be deemed inhuman if you had not thought of ways to adapt your work to the current digital landscape. If you were a musician, you might be deemed inhuman if you had not thought of ways to adapt your work to the current digital landscape. If you were a poet, you might be deemed inhuman if you had not thought of ways to adapt your work to the current digital landscape. If you were a visual artist, you might be deemed inhuman if you had not thought of ways to adapt your work to the current digital landscape. If you were a theater director, you might be deemed inhuman if you had not thought of ways to adapt your work to the current digital landscape.

The dangers of data-based certainty

W hile governments are wrangling to adjust Covid-19 vaccination programmes on the track, as safety concerns and production problems weigh in heavily, there is another aspect of the pandemic’s impact on national GDP that are fraught with difficulty, owing to difference in economic structures and statistical methodology. But that does not stop claims about which economies are weathering the crisis better or worse.

Or take the “true” rate of inflation. Seemingly technical debates about how best to construct a price index mask profound and directional conflicts, such as those between borrowers and bond holders, or workers and employers.

The data we use shape our view of a complex, changing world. But data reflect different perspectives from, among other things, the kind of data collected. The latter, in turn, is influenced by who is collecting the data, and what methods are used to collect it. Different societies, or even different countries within the same society, may collect or interpret data differently. This can lead to different conclusions about the same phenomenon, even when using the same data.

The same phenomenon, or different conclusions about the same phenomenon, even when using the same data.

The danger is that data-based certainty can lead to increased conflict with political and policy-making. Before we entrust more decisions to data-based machine-learning algorithms, we need to consider how these algorithms are trained and tested, and whether they are biased or not.

The Great Tax Rebalancing

A new corporate tax rate of 28% is therefore an important part of the Biden plan to make the US more competitive. One reason is that it addresses the problem of excessive automation, which is costing jobs and reducing productivity more complicated in practice. Low- income countries cannot do much about their own competitiveness, but they can do something about the competitiveness of higher-income countries. Although they may not be able to reduce their own corporate tax rates, they can impose a global minimum tax on profits earned by MNCs in low-tax jurisdictions.

Why Nations Need a Global Minimum Corporate Tax Rate

There are 120 countries that have committed to implement the global minimum tax rate of 15% starting in 2023. The US is one of these countries. However, the US is currently facing significant resistance from other countries, particularly from the 20 member states of the European Union, which have expressed their opposition to the US plan.

The US is currently facing significant resistance from other countries, particularly from the 20 member states of the European Union, which have expressed their opposition to the US plan.

The US has been pushing for a global minimum corporate tax rate of 15% in order to prevent US-based multinational corporations from shifting profits to low-tax jurisdictions. The US has been urging other countries to adopt a similar tax rate, and has threatened to impose a digital services tax on countries that do not comply.

Biden administration to invest $17bn to fight Covid variants

The Biden administration announced on Friday that it will invest $17 billion over the next two years to develop and stockpile vaccines and therapeutics to help the US respond to future pandemics.

In an executive order signed by US President Joe Biden, the administration said it would establish a new Office of Strategic National Prerogatives at the White House to coordinate a wide range of efforts to prepare for future pandemics.

In particular, the new office will be responsible for:

- Developing a national strategy to prepare for and respond to future pandemics
- Coordinating with state, local, and private sector partners to ensure that supply chains are resilient and ready
- Investing in research and development of vaccines and therapeutics
- Creating a National Pandemic Reserve

The move comes after a surge in Covid cases and hospitalizations in recent weeks, prompting concerns about the potential for a new surge of infections.

Biden said in a statement that the new office will help the US be better prepared for future pandemics by increasing the speed, scale, and scope of the US pandemic response.

He added: "We must be ready to respond to future pandemics, not just in the US but globally."
Top chefs bringing flavours of the world to your doorstep

The ministry of Municipality and Environment (MME)’s yards selling local produce from April 1 will see the return of local farmers bringing their produce to city dwellers, aiming to introduce the Qatari home cook to the produce of the country’s top chefs.
