HIGH RENTS AMONG FINANCIAL WOES OF SMALL BUSINESSES IN QATAR

The high cost of rents in Qatar continues to add to the financial woes of small businessmen, who have been hit hard by the high cost of rents. The high cost of rents is causing many businesses to seek alternative options, such as online businesses, which are less expensive than renting a physical space. HMC raises awareness to dispel misconceptions about psoriasis

The recognition of Psoriasis Awareness Month in August, particularly in the United Kingdom, is raising awareness to dispel common misconceptions about the condition that many patients experience.

Dr Ahmad Hussain Talib had a discussion about the condition at the Mawson, one of the hospitals that provides skin care services in the area. He said: “Psoriasis is a chronic inflammatory disease of the skin, affecting around 3% of the population. It is often characterized by red, scaly plaques that can appear on any part of the body. The condition is caused by an overactive immune system that mistakes healthy skin cells for harmful ones.

“Psoriasis can be very distressing for people, as it can cause physical and emotional distress. It can also affect their quality of life. However, it is important to know that there are treatments available to help manage the condition.”

The condition can affect anyone, regardless of age or gender, and can be triggered by a variety of factors, including stress, injury, and certain medications.

The Mawson Hospital and the Mawson Skin Care Centre are working together to raise awareness of Psoriasis Awareness Month.

Northwestern University faculty receive grants to NU-Q

Northwestern University in Illinois is awarding funding to researchers for their work in the field of nanotechnology and materials science.

The university announced today that it has awarded grants to 15 researchers to support their work in these areas.

These grants are intended to support cutting-edge research and to foster interdisciplinary collaboration.

The researchers receiving the grants include:

- Nanolab’s Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project
- Professor inkjet printing project

The grants will support research in areas such as materials science, nanotechnology, and the use of inkjet printing technology.

The Northwestern University Foundation has a long history of supporting research, and these grants are part of its ongoing commitment to advancing knowledge and innovation in these important fields.

Total Covid recoveries at 226,966

The Ministry of Public Health (MPH) reported today 1,113 new confirmed cases of Covid-19 along with 738 new recoveries and 6 new deaths. The MPH recorded 1,113 new infections from the virus during the past 24 hours, bringing the total number of confirmed cases to 226,966.

Vaccination data

- 10,821,990 doses have been administered since the start of the programme.
- 6,932,708 doses are administered per day.
- 91.3% of the eligible populatio

Successful: The vaccination campaign has been widely praised for its efficiency and the rapid progress made.

- The focus on high-risk groups, such as elderly people and those with underlying health conditions, has been a key factor in the success of the vaccination drive.

- The government has been commended for its effective communication strategy, which has helped to build trust and confidence in the vaccination programme.

- The campaign has also been praised for its coordination with other health care providers, which has helped to ensure that people can receive their vaccines at convenient locations.

SIF pays tribute to ‘Father of Indian space programme’

The Society of Indians in Qatar (SIF) hosted a cultural programme on Friday to mark the 100th anniversary of Father of Indian space programme Dr. Vikram Sarabhai’s birth. The event was organized under the theme ‘Sarasvati Kesar Ki Manjari’ in presence of 75 years of independence.

Ahoor Ahmad, the executive director of SIF Qatar, said: “Dr. Vikram Sarabhai was the first to conceptualize and implement a space programme in India. The SIF event was organized to pay tribute to his memorable contributions to the Indian space programme. The India-Bangladesh cooperation in space science, technology, and capacity building has been under the patronage of Dr. Vikram Sarabhai. The SIF event paid tribute to his contributions by showcasing the Indian culture with unique traditional performances.”

Prof. Dr. Buthakath, director of the SIF Academy, said: “The SIF Academy celebrates the 5 years of its establishment in 2018, and today we celebrate the 100th anniversary of Dr. Vikram Sarabhai. On this auspicious occasion, we have dedicated a series of events to pay tribute to Dr. Sarabhai. Today’s programme will feature a range of activities such as traditional music, dance and other cultural performances.”

The programme was attended by the SIF members from various fields, including space science, technology, and cultural heritage. The event concluded with a rendition of the national anthem and a traditional dance performance, symbolizing the unity and pride of the Indian community in Qatar.
Wellness Challenges: Walkers out to explore

Walking is often described and promoted as an exercise to the growing demands of health-conscious individuals. In fact, Wellness Challenges have gained great popularity due to walking as a form of exercise. Unlike the usual walk, Wellness Challenges encourage participants to enjoy the scenic beauty of local places while walking for a healthy lifestyle.

"Walking is not only a stress reliever but also physically engaging," said Swati Vakil, founder and managing director of the group. The Wellness Challenge, which is an American-based networking service for tracking human activities which incorporates social and physical engagement is shared in the application along with pictures of the location. Wellness Challenges have around 80 members spread across Qatar. For walking, the members stick to a schedule to ensure that they are all walking along the same path at the same time. Participants are encouraged to share their experiences and best practices with the group.

"Through Wellness Challenges, we aim to promote a healthy lifestyle and encourage participants to engage in physical activities and share their experiences," said Swati Vakil. The group has organized several events to promote a healthy lifestyle among its members. The next challenge will be to encourage more families to participate in Wellness Challenges. The group is looking forward to an increase in participation and is planning to organize more events in the future.

Shaeqee Ne Fun holds Pakistan Independence Day programme

Leading Pakistan Mem- ory and cultural event Shaeqee Ne Fun monthly celebrated the 75th Independence Day of Pakistan on at an event held at the Hotel Marina. Chairman Shaeqee Ne Fun club Ayesha Alqasim addressed the guests present.

Shaeqee Ne Fun chairman Ayesha Alqasim presented the programme, which was sponsored by a number of Pakistani institutions and organizations. The programme was well received by the audience present.

Birla School bags Talentspire trophy

Birla Public School in association with the Indian Oil Company won the Talentspire trophy for the best science project. The school was awarded the trophy for their innovative project titled "Plastic Waste to Fuel". The project was developed by a group of students from Birla Public School in collaboration with the Indian Oil Company. The project focused on converting waste plastic into fuel, which can be used as an alternative to traditional fuels. The students of Birla Public School demonstrated their technical skills and innovative thinking, which earned them the trophy.

Hundreds donate blood at camp organised by ICC

A record 464 individuals donated blood at a camp organized by the Indian Cancer Congress (ICC), as part of its annual blood donation campaign to mark World Cancer Day. The camp was held under the patronage of Dr. Sanjoy Dhar, President of the ICC. The event was organized to encourage people to donate blood regularly and take part in the fight against cancer.

"We urge everyone to participate in blood donation camps and contribute to the fight against cancer," said Dr. Sanjoy Dhar, President of the ICC. "Regular blood donation is crucial to saving lives and supporting patients in need. We encourage everyone to participate in blood donation camps and make a difference in the fight against cancer."

**Sydney Imposes Nightly Covid Curfew From Next Week**

Two million residents of Sydney, Australia's largest city, will be subject to a night-time curfew from next week, as the government seeks to contain a Otto Delta variant outbreak.

The curfew, which will run from 11:00pm to 5:00am, is expected to last for four weeks and will affect about 2.5 million people. It comes after a rapid rise in cases in recent days, with more than 100 new infections reported in the past week.

The move comes after the authorities had previously announced stricter measures, including a ban on gatherings of more than 10 people and the closure of non-essential businesses.

**New Zealand Pm Vows To Stamp Out Delta As Outbreak Widens**

New Zealand Prime Minister Jacinda Ardern has vowed to stamp out the Delta variant of COVID-19 as the outbreak continues to grow in the country.

Ardern said on Monday that the government was committed to eradicating the virus and that the country was on track to reach that goal.

She told a press conference that the government had a plan in place to manage the outbreak and that it was working closely with the health authorities.

The government has also announced a series of new measures to contain the outbreak, including the closure of non-essential businesses and the suspension of flights from affected countries.

**Singapore Says Asian Not As Effective As Hoped In Myanmar**

Singapore's prime minister-designate, Lee Hsien Yang, has said that the country's mass vaccination efforts are not as effective as hoped in Myanmar.

Lee said that the country's efforts to vaccinate its population had not been adequate and that the government needed to do more to control the spread of the virus.

He said that the government was working closely with the Ministry of Health to contain the outbreak and had taken steps to reduce the number of cases that were being reported.

The prime minister also said that the government was working closely with the Ministry of Education to provide support to schools and students.

Lee said that the government was committed to ensuring that the education system was not affected by the pandemic and that students would continue to receive a quality education.

SNP, Scottish Greens confirm power-sharing agreement

Scotland's power-sharing agreement is set to take shape as the SNP and Scottish Greens confirm they will form a new administration.

The agreement will see the SNP and Greens form a power-sharing arrangement, with the Greens holding a number of senior ministerial positions.

The deal was announced by the SNP leader, Nicola Sturgeon, and the Greens' leader, Patrick Harvie, in a joint press conference on Monday.

The agreement includes a range of policies, including health, education, and climate change.

The SNP and Greens have also agreed to work together on a range of other issues, including the Scottish Parliament and the Scottish Government.

The new administration is expected to be in place by the end of the year.

India approves world's first Covid DNA vaccine

India has approved the world's first DNA-based vaccine for Covid-19, the Indian government announced on Monday.

The vaccine, developed by Bharat Biotech and the Indian Council of Medical Research, is based on the DNA of the SARS-CoV-2 virus and is designed to stimulate an immune response against the virus.

The vaccine, called Covaxin, has already undergone phase 3 trials and is expected to be available in India within the next few months.

India has been at the forefront of Covid-19 vaccine development, with the government and private companies investing heavily in research and development.

The country has administered more than 1.5 billion vaccine doses so far, making it one of the world's largest vaccination campaigns.

The government has announced plans to administer over 400 million doses each week, aiming to achieve herd immunity by the end of 2021.

Raab defends decision in Afghan minister call row

Great Britain and the United States have announced plans to closer economic ties with Afghanistan, aiming to boost trade and investment in the war-torn country.

The move comes after a recent visit by British Foreign Secretary Dominic Raab to Afghanistan, where he met with Afghan officials to discuss ways to strengthen economic ties.

The British government has pledged to support Afghan-led reconstruction efforts, with a focus on infrastructure development and private sector investment.

The US government has also expressed interest in investing in Afghanistan, with a focus on areas such as agriculture, energy, and natural resources.

The two countries have agreed to work together on a range of initiatives, including investment in the country's oil and gas sector, and the development of new trade routes.

---

India to exceed emission-cut targets

India has exceeded its targets for reducing carbon emissions, according to findings by the country's National Council on Applied Economic Research.

The study found that India has reduced its carbon emissions by 15% below the baselines established under the Paris Agreement, well ahead of the target set for 2020.

India has been a leader in renewable energy, with a significant increase in the use of solar and wind power, and has set ambitious targets for further emissions reductions.

The government has also taken steps to improve energy efficiency and promote the use of clean fuels, with a focus on electric vehicles and public transport.

India has been praised for its efforts to combat climate change, with several international organizations congratulating the country on its progress.

India-China trade resumes soon in face of border standoff

India and China have agreed to resume trade soon, after months of tensions at their border.

The two countries have been engaged in a border standoff since June, with both nations accusing each other of major incursions.

The agreement follows a series of high-level talks between the two nations, with both sides agreeing to work towards resolving the dispute.

India and China are major trading partners, with trade worth billions of dollars annually.

The resumption of trade is seen as a positive step towards rebuilding relations between the two nations.

The vaccine, called Covaxin, has already undergone phase 3 trials and is expected to be available in India within the next few months.

India has been at the forefront of Covid-19 vaccine development, with the government and private companies investing heavily in research and development.

The country has administered more than 1.5 billion vaccine doses so far, making it one of the world's largest vaccination campaigns.

The government has announced plans to administer over 400 million doses each week, aiming to achieve herd immunity by the end of 2021.

Raab defends decision in Afghan minister call row

Great Britain and the United States have announced plans to closer economic ties with Afghanistan, aiming to boost trade and investment in the war-torn country.

The move comes after a recent visit by British Foreign Secretary Dominic Raab to Afghanistan, where he met with Afghan officials to discuss ways to strengthen economic ties.

The British government has pledged to support Afghan-led reconstruction efforts, with a focus on infrastructure development and private sector investment.

The US government has also expressed interest in investing in Afghanistan, with a focus on areas such as agriculture, energy, and natural resources.

The two countries have agreed to work together on a range of initiatives, including investment in the country's oil and gas sector, and the development of new trade routes.

India to exceed emission-cut targets

India has exceeded its targets for reducing carbon emissions, according to findings by the country's National Council on Applied Economic Research.

The study found that India has reduced its carbon emissions by 15% below the baselines established under the Paris Agreement, well ahead of the target set for 2020.

India has been a leader in renewable energy, with a significant increase in the use of solar and wind power, and has set ambitious targets for further emissions reductions.

The government has also taken steps to improve energy efficiency and promote the use of clean fuels, with a focus on electric vehicles and public transport.

India has been praised for its efforts to combat climate change, with several international organizations congratulating the country on its progress.

India-China trade resumes soon in face of border standoff

India and China have agreed to resume trade soon, after months of tensions at their border.

The two countries have been engaged in a border standoff since June, with both nations accusing each other of major incursions.

The agreement follows a series of high-level talks between the two nations, with both sides agreeing to work towards resolving the dispute.

India and China are major trading partners, with trade worth billions of dollars annually.

The resumption of trade is seen as a positive step towards rebuilding relations between the two nations.
Top tourist destinations in Kenya

By Ismail Mucunguzi and Standard Publisher

Kenya has been known as a major tourist destination, attracting millions of visitors every year, thanks to its beautiful beaches, diverse wildlife, and warm hospitality. Here are some of the top tourist destinations in Kenya:

1. **Masai Mara National Reserve** - Known for its incredible wildlife, the Masai Mara is a popular destination for wildlife enthusiasts. The park is home to a variety of animals, including lions, elephants, and leopards.

2. **Lake Nakuru National Park** - This park is known for its flamingos, which can be seen in large numbers. The park also has a variety of other bird species and mammals.

3. **Tsavo East and Tsavo West National Parks** - These parks are known for their elephant and rhino populations. The parks also have a variety of other bird species and mammals.

4. **Samburu National Reserve** - This reserve is known for its elephants and rhinos, as well as its beautiful landscape.

5. **Mombasa Old Town** - This historic town is known for its colonial architecture and vibrant culture.

6. **Diani Beach** - Known for its beautiful beaches and crystal-clear waters, Diani Beach is a popular destination for sea lovers.

7. **Lake Naivasha** - This lake is known for its birdlife and aquatic animals. The lake is also a popular destination for water sports.

8. **Nakuru Lake National Park** - This park is known for its flamingos and other bird species. The park also has a variety of other bird species and mammals.

9. **Mombasa** - Known for its history and culture, Mombasa is a popular destination for tourists.

10. **Montebello Resort and Spa** - This luxury resort is known for its beautiful beach and spa facilities.

These destinations offer a variety of activities, from wildlife safaris to beach holidays, making Kenya a destination for all types of travelers.
Why aviation should embrace carbon taxation

By Adiel Turner

Real catastrophic levels of 20C rise can be avoided only if we make a global push by climate leaders to cut carbon emissions. If aviation, the fastest-growing sector for carbon emissions, doesn’t take action soon, carbon emissions are projected to rise strongly in the years to come. This trend is causing a global push by the aviation sector to reduce its carbon emissions.

The recent news that the International Civil Aviation Organization (ICAO) has agreed to develop a global carbon pricing scheme for aviation is a significant step forward in addressing this issue. The scheme will come into effect from 2024 and is designed to incentivize airlines to reduce their carbon emissions.

Despite this positive step, however, there are still significant challenges to be addressed. One of the biggest challenges is the lack of a unified approach to carbon pricing across different regions.

In recent years, many countries have implemented carbon pricing schemes, but the schemes vary in terms of their scope, coverage, and level of ambition. This can make it difficult for airlines to navigate the complex regulatory landscape.

To address this issue, it is important for countries to work together to develop a harmonized approach to carbon pricing. This could involve the creation of a global carbon market, where airlines can buy and sell carbon credits, to facilitate the trading of carbon credits across different regions.

Moreover, it is crucial to ensure that the carbon pricing schemes are adequately reflecting the actual cost of carbon emissions. This involves tailoring the schemes to the specific conditions and circumstances of each region.

In conclusion, the recent agreement by the ICAO to develop a global carbon pricing scheme is a welcome development. However, it is crucial to ensure that the scheme is adequately reflecting the actual cost of carbon emissions and is harmonized across different regions. This will require a concerted effort by the aviation sector and policymakers to address the challenges and ensure the success of the scheme.

Global food systems on the edge

By Barbara Steinwein

The Covid-19 pandemic has had profound effects on food systems, livelihoods, and the environment. The pandemic has also exposed the fragility of global food systems, which are characterized by high levels of reliance on imports and limited buffering capacity. The pandemic has also highlighted the need for a more resilient and sustainable food system.

The Covid-19 pandemic has had a significant impact on trade, with countries closing borders and imposing restrictions on the movement of goods and people. This has led to disruptions in the supply chain, with shortages in food supplies and price spikes.

Moreover, the pandemic has also highlighted the need for a more resilient and sustainable food system. The pandemic has led to a greater appreciation of the importance of local and regional food systems, which are better able to respond to shocks and provide food security.

In conclusion, the Covid-19 pandemic has exposed the fragility of global food systems and highlighted the need for a more resilient and sustainable food system. It is crucial to invest in local and regional food systems and ensure that they are better equipped to respond to shocks and provide food security.

Bulk of climate research carried out in developed countries

We are neglecting. We are neglecting the mitigation and adaptation measures that are essential to address climate change. We are neglecting the need for action on all fronts, from individual actions to policy changes.

Even when governments make a commitment to reducing greenhouse gas emissions, the real emissions reductions are often lagging behind.

"In one of the findings of the scientific enterprise, it is based on research that is clearly shown," it says.

A new study published in the journal Nature Climate Change has examined the global carbon budget and found that, while developed countries are responsible for the majority of the world's emissions, they are not the only ones responsible.

The study found that, while developed countries are responsible for the majority of the world's emissions, they are not the only ones responsible. Developing countries are also contributing to the global carbon budget, and their emissions are expected to continue rising in the coming decades.

The study highlights the need for a global effort to reduce emissions and limit the warming of the planet. It also underscores the importance of researching the role of developing countries in addressing climate change.

In conclusion, the study highlights the need for a global effort to reduce emissions and limit the warming of the planet. It also underscores the importance of researching the role of developing countries in addressing climate change.

GULF TIMES

Climate science: ‘blind spots’ in developed nations

This month’s hard-hitting report from the UN climate science panel raised the alarm on the “unprecedented and widespread” impact of global warming — but not all parts of the world will see the benefits. The report finds that, while developed nations will see significant benefits from climate action, the developing world will suffer significant costs. The report highlights the need for developed nations to take responsibility for their actions and to provide financial support to developing nations, as well as to share technology and best practices.

The report highlights the need for developed nations to take responsibility for their actions and to provide financial support to developing nations, as well as to share technology and best practices. Developed nations are responsible for the majority of global emissions, and they must take the lead in reducing their emissions and transitioning to a low-carbon economy.

In conclusion, the report highlights the need for developed nations to take responsibility for their actions and to provide financial support to developing nations, as well as to share technology and best practices. Developed nations must take the lead in reducing their emissions and transitioning to a low-carbon economy, and they must support the developing world in its efforts to do the same.

North America coronavirus cases surge as pandemic eases elsewhere

Catalonia govt seeks to reimpose Covid curfew in Barcelona

Nato allies press more for mass evacuation and border closures

Greek completes border wall extension to deter migrants

Grace regains hurricane force ahead of second Mexican landfall

**NATO allies press more for mass evacuation and border closures**

The coronavirus (COVID-19) pandemic continued to subside worldwide in recent weeks, with the World Health Organization (WHO) reporting that the number of new cases globally peaked in January and has since declined. However, some countries are seeing a resurgence in cases, particularly in Europe, prompting increased calls for mass evacuation and border closures.

**Nato allies press more for mass evacuation and border closures**

Several Nato countries have called for a potential airlift of civilians from Kabul to Europe, noting the current scenario of the Withdrawal Agreement deadline. The collapse of the Taliban regime has led to a surge in displaced people, and many are looking towards Europe for assistance.

**Greek completes border wall extension to deter migrants**

Greek authorities have completed the extension of their border fence with Turkey, following an agreement with Nato allies. The new extension is expected to deter migrants from entering the country and crossing the border.

**Grace regains hurricane force ahead of second Mexican landfall**

Hurricane Grace, which has weakened slightly over the past few days, is expected to regain hurricane strength again as it approaches the coast of Mexico. The storm has already caused significant flooding and property damage in the Caribbean, and is expected to continue its path towards Mexico's eastern coast.

**Catalonia govt seeks to reimpose Covid curfew in Barcelona**

The Catalan government has reintroduced a curfew in Barcelona in an attempt to control the spread of the coronavirus. The curfew, which will run from 11 p.m. to 6 a.m., is expected to remain in place until the end of the month.

**Nato allies press more for mass evacuation and border closures**

The Nato alliance has increased its efforts to evacuate civilians from Afghanistan, with calls for a mass airlift to Europe. This is in response to the Taliban's control over the country and the need to protect civilians.

**Greek completes border wall extension to deter migrants**

Plant nurseries anticipating demand surge

By Ivan Bannister
Staff Reporter

S
ome of various indoor and outdoor plants in Qatar may seem pleasantly pink in an indoor nursery as the temperatures start to cool off, and so it is not surprising that more and more people are planting in this season. People are now looking to add more greenery to their homes, and this trend is expected to continue in the coming months.

"We also expect a huge demand for landscaping services," added a nursery owner, who did not want to be named. "Many people are looking to add more greenery to their homes, and this trend is expected to continue in the coming months." He added that he had already received a significant number of orders for indoor plants, and that he expected the demand to continue to increase in the coming months.

"The demand for indoor plants has been increasing steadily in recent years, and we have seen a significant increase in sales in the past few months," said another nursery owner. "People are now looking for ways to improve the air quality in their homes, and indoor plants are a popular option." He added that he had already received a significant number of orders for indoor plants, and that he expected the demand to continue to increase in the coming months.
